

**Request For Qualifications, Engineering and Landscape Architectural Services
10th Street Realignment/Alley Reconstruction, Parking
in the Downtown Certified Technology Park**

Addendum, September 22, 2014

Questions/Answers

- **Will firms which have been involved in previous planning efforts for the Certified Technology Park redevelopment receive consideration?**
Each qualification package will be evaluated on its own merits.

- **Does the City prefer the project to be led from the engineering or landscape architectural perspective?**
The City seeks a signature street design with green infrastructure and other place-making features. The creative design effort should be led from the landscape architectural perspective, with feasibility of design functionality verified from the engineering perspective and coordinated with the engineering plans completed for utilities and stormwater drainage. However, as long as this creative design arrangement can be assured, teams are free to propose alternative structures for administrative management or contractor/subcontractor relationships deemed appropriate to best attain desired outcomes for the project.

- **Should topographic survey services be included on the proposed design team or will survey services be provided by the City?**
The City will have topographic survey information available for the design team.
