Monroe County Commissioners:

Hydrogeology Inc. (Hydrogeology) respectfully submits this karst report for an approximately 90-acre property located on Fullerton Pike in Bloomington, IN.

1 – Overview

The Site is located near the intersection of Fullerton Pike and Interstate 69 (I-69) in Bloomington, Indiana (Figures 1 & 2). The property currently consists of areas of trees and open pasture.

2 - Geology / Physiography

The Site is in the Mitchell Plateau physiographic region, which is one of the primary karst forming areas in Indiana. The bedrock at the Site is primarily the St. Louis Limestone (Hasenmueller, Estell, Keith, and Thompson, 2008) (Figure 3). The St. Louis is composed primarily of limestone but includes lesser amounts of shale, dolostone, sandstone, and chert (Carr, Leininger, and Golde, 1978). It is typically between 104 and 150 feet thick in the Bloomington area (Hasenmueller, Estell, Keith, and Thompson, 2008). The St. Louis Limestone is one of the major karst forming bedrock units in Indiana. The Salem Limestone is present in an approximately 0.5-acre area on the southeast corner of the property. The Salem Limestone is known for having exceptionally thick beds (Rexroad, 1986). In Monroe County the Salem Limestone varies in thickness from 56 to 86 feet (Hasenmueller, Estell, Keith, and Thompson, 2008).

3 – Sinkholes & Springs

Sinkholes are surface depressions that form in a variety of ways in karst areas (Figure 4). Sinkholes can have a swallow hole, which is an opening in the ground where water infiltrates. Groundwater flow in karst areas is predominantly fracture flow, meaning the bedrock itself has low permeability while the fractures in the bedrock are open conduits that allow water, soil, and other materials to travel quickly through the subsurface. Water that drains into a sinkhole can eventually discharge at a karst spring (Figure 5).

Several dye traces have been conducted in the vicinity of the Site and demonstrate divergent groundwater flow direction (INDOT, 2013) (Figure 6).

4 – Karst Desktop Review

A review of available karst resources was conducted prior to the field survey. Those resources include United State Geological Survey (USGS) topographic maps, Indiana Map karst data, 1-ft LIDAR topographic contours the I-69 Tier II Environmental Impact Statement (I-69 EIS), and private cave databases.

5 – Karst Field Survey

A karst field survey was conducted at the Site on October 31 and November 4 and 8, 2022. Nineteen sinkholes were identified during the field survey and are described below (Figure 7, Appendix A, Table 1). Sinkhole dimensions are based on 1-ft LIDAR topographic contours. All sinkholes were flagged and should be surveyed. Mitigation recommendations for each sinkhole are based on City of Bloomington Unified Development Ordinance, Chapter 20.04.030. The boundaries for all Karst Conservancy Easements should be based on the topographic survey for the Site, which has not been completed.

SH-01 – Sinkhole SH-1 is approximately 12 feet in diameter and 3 feet deep (Photograph 1). No bedrock or opening was observed within the sinkhole.

Mitigation Measures: SH-01 should receive a 25-foot Karst Conservancy Easement (KCE). Additionally, erosion and sediment control measures should be installed around the rim of SH-01 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-02 – Sinkhole SH-02 is 17 feet in diameter and 4 feet deep (Photograph 2). The sinkhole is soil filled with no apparent opening or bedrock.

Mitigation Measures: SH-02 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-02 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-03 – Sinkhole SH-03 is 65 feet long, 40 feet wide, and 7 feet deep. No bedrock or opening were observed within the sinkhole (Photograph 3).

Mitigation Measures: SH-03 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-03 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-04 – Sinkhole SH-04 is 57 feet long, 34 feet wide, and 7 feet deep (Photograph 4). An approximately 3 foot long, 6-inch-high opening is present within the sinkhole under a bedrock ledge. The opening extends horizontally into the subsurface for approximately 2 feet (Photograph 5).

Mitigation Measures: SH-04 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-04 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-05 – Sinkhole SH-05 is 25 feet long, 18 feet wide, and 4 feet deep. No bedrock or opening were observed within the sinkhole (Photograph 6).

Mitigation Measures: SH-05 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-05 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-06 – Sinkhole SH-06 is 50 feet long, 25 feet wide, and 6 feet deep (Photographs 7 & 8). The sinkhole is compound in nature with two depressions. No soil openings or bedrock were observed within either depression

Mitigation Measures: SH-06 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-06 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-07 – Sinkhole SH-07 is 47 feet in diameter and 8 feet deep (Photograph 9). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-07 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-07 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-08 – Sinkhole SH-08 is 80 feet long, 45 feet wide, and 4 feet deep (Photographs 10 & 11). The sinkhole is soil filled with no obvious opening or bedrock. A small surface drainage ends in the sinkhole.

Mitigation Measures: SH-08 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-08 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-09 – Sinkhole SH-09 is 10 feet in diameter and 3 feet deep (Photograph 12). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-09 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-09 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-10 – Sinkhole SH-10 is 10 feet in diameter and 3 feet deep (Photograph 13). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-10 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-10 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-11 – Sinkhole SH-11 is 30 feet in diameter and 2 feet deep (Photograph 14). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-11 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-11 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-12 – Sinkhole SH-12 is 65 feet in diameter and 6 feet deep (Photograph 15). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-12 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-12 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-13 – Sinkhole SH-13 is approximately 1.42 acres in area, of which 0.84 acres fall within the Site boundary (Photographs 16, 17, & 18). The sinkhole has been significantly altered by previous construction, initially for State Road 37 (SR-37) and then by I-69. Several check-dams are in place within the sinkhole. The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-13 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-13 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-14 – Sinkhole SH-14 is 0.55 acres in area, of which 0.24 acres fall within the Site boundary (Photograph 19). The sinkhole has been significantly altered by previous construction, initially for State Road 37 (SR-37) and then for I-69. A dye trace was conducted at the sinkhole for the I-69 EIS and demonstrated groundwater flow to the southwest to Sexton Spring East. (Photo 37). The portion of the sinkhole on the Site is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-14 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-14 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-15 – Sinkhole SH-15 is 1.19 acres in area, of which 1.03 acres fall within the Site boundary (Photograph 20). The sinkhole has been significantly altered by previous construction, initially for State Road 37 (SR-37) and then by I-69. The portion on the sinkhole on the Site is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-15 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-15 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-16 – Sinkhole SH-16 is 5 feet in diameter and 2 feet deep (Photograph 21). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-16 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-16 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-17 – SH-17 is a potential sinkhole that is 3 feet in diameter and unknown depth as it is filled with riprap (Photograph 22).

Mitigation Measures: A limited excavation of the riprap should be conducted to determine if SH-17 is a sinkhole. If SH-17 is established as a sinkhole it should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-17 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-18 – Sinkhole SH-18 is 10 feet long, 6 feet wide, and 2 feet deep (Photograph 23). The sinkhole is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-18 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-18 prior to land clearing operations and until revegetation has occurred at the Site after construction.

SH-19 – Sinkhole SH-19 is 2.45 acres in area, of which only 0.02 acres fall within the Site boundary (Photograph 24). The sinkhole has been significantly altered by previous construction, initially for State Road 37 (SR-37) and then by I-69. The portion on the sinkhole on the Site is soil filled with no obvious opening or bedrock.

Mitigation Measures: SH-19 should receive a 25-foot KCE. Additionally, erosion and sediment control measures should be installed around the rim of SH-19 prior to land clearing operations and until revegetation has occurred at the Site after construction.

6 – Study Limitations

The identification of karst features at the Site was limited to surface inspection. No subsurface investigations were conducted for this study. Undocumented karst features are possible in the subsurface. Dense vegetation is present in the wooded areas of the Site. Identification of karst features can be difficult in areas with dense ground vegetation. Clearing of ground vegetation was not within the scope of work for this survey.

Extensive ground alteration has occurred at the Site with the removal of topsoil in some areas and mounding in other areas (Figure 8). Approximately 19 acres have been altered by either removal or addition of topsoil. Ground alteration at the Site could have removed the surface expression of karst features.

7 – Karst Best Management Practices

The following are karst management practices that should be considered for the Site:

Water Quality

Groundwater recharge in karst areas predominately occurs through sinkholes. Water infiltrates into a sinkhole, then flows along karst conduits and typically discharges to a karst spring. There is minimal filtration of the water throughout this shallow groundwater cycle. Therefore, it is critical to maintain or improve water quality at the Site.

Impacts to water quality at the Site are most likely to occur due to erosion and sediment mobilization during construction. Erosion and sediment control will be critical to preventing water quality impacts. All sinkholes should be protected with appropriate erosion and sediment controls for the duration of construction at the Site. In addition to these measures a low salt no herbicide/pesticide spray policy should be implemented for the Site.

Several drinking water wells registered with the Indiana Department of Natural Resources (IDNR) are near the Site (Figure 9). Based on previously conducted dye traces at the Site, these and other wells could be impacted from construction activities at the Site.

Drainage Alteration

Alteration of natural drainage patterns can result in the development of new sinkholes, or enlargement of existing sinkholes, particularly when run-off is concentrated. The drainage plan for the Site should maintain the existing drainage patterns wherever possible and prevent concentrated run-off. To prevent development of new sinkholes, detention basins should be lined with an impervious material.

Unknown Karst Features

Previously unknown karst features are possibly present in the subsurface at the Site. If any previously unknown karst feature is identified during development of the Site, the features should be protected with erosion and sediment control measures and inspected by a karst specialist.

8 – Summary

A desktop review and field survey were conducted at the Site to identify any karst features. Nineteen sinkholes were identified at the Site. All sinkholes should have a 25-ft or 50-ft KCE and be protected with erosion and sediment control measures throughout the entire construction process. The karst field survey was limited to surface inspection with no subsurface investigation. Unknown karst features are possibly present in the subsurface at the Site. Dense vegetation was present in areas of the Site, which prevented close ground inspection in those areas. Removal and mounding of soil have occurred over approximately 19 acres of the site, which could have removed the surface expression of karst features. If a previously unknown karst feature is discovered during construction activities the feature should be protected with erosion and sediment control measures and inspected by a karst specialist.

Hydrogeology appreciates the opportunity to provide this summary report. If you have any questions, concerns, or comments please do not hesitate to contact me directly at (812) 219-0210.

Sincerely,

Hydrogeology Inc.

Jason N. Krothe, LPG IN-2511
President

Subject: **Phase I Environmental Site Assessment (ESA)
South State Road 37 and West Fullerton Pike
Bloomington, Indiana 47403 (Subject Property)**

Dear Mr. Jeff Cockerill,

This report summarizes the activities and findings of the Phase I Environmental Site Assessment (ESA) conducted at the above-referenced location. VET Environmental Engineering, LLC (VET) representatives Ms. Sara Hamidovic, MS, PE, CHMM, Ms. Rene Lloyd, MS, MPA, and Ms. Emily Throop performed a walk-through reconnaissance of the Subject Property and a visual reconnaissance of adjoining properties from readily accessible public thoroughfares and the Subject Property on August 2, 2022.

The Phase I ESA was conducted at the request of Mr. Jeff Cockerill on behalf of the Monroe County Board of Commissioners.

Please do not hesitate to contact us at 812-822-0400 if you have any questions regarding this report.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Sara Hamidovic', is written over a light blue horizontal line.

Sara Hamidovic, MS, PE, CHMM
Principal Engineer

Phase I Environmental Site Assessment

1.0 EXECUTIVE SUMMARY

VET Environmental Engineering, LLC (VET) performed a Phase I Environmental Site Assessment (Phase I) on one parcel (53-08-18-300-001.000-009) of vacant agricultural land located at South State Road 37 and West Fullerton Pike, Bloomington, Monroe County, Indiana, 47403 (Subject Property). The Subject Property location is depicted on the area map (**Exhibit 1**) and an aerial photo with approximate Subject Property boundaries (**Exhibit 2**). The Phase I was performed for the Monroe County Board of Commissioners, the prospective buyer of the Subject Property, at the request of Mr. Jeff Cockerill. The Subject Property is owned by Bill C. Brown Revocable Trust. The Phase I is being conducted as a due diligence measure pursuant to purchase of the Subject Property.

Investigations and interviews with persons knowledgeable of the Subject Property revealed potential sources of environmental concern on the Subject Property. The Phase I identified the following Recognized Environmental Conditions (RECs) in connection with the Subject Property:

- VET observed evidence of grading and deposition of fill material on the Subject Property. The grading is reportedly a result of the construction of a road foundation that occurred around the year 2015. Additionally, topsoil was reportedly stripped from the Subject Property and sold around the year 2015. Although the grading and filling may be attributed to the construction of the road foundation or excavation of topsoil from the Subject Property, the origin and contents of the potential fill material on the northern Subject Property boundary is unknown and as such constitutes an REC.

The following non-scope considerations were identified during the Phase I:

- VET observed hydrophytic vegetation, likely jurisdictional streams, and potential karst features on the Subject Property. Based on the observed hydrophytic vegetation, mapped and observed karst features and streams, and erosional features, VET recommends a comprehensive wetlands and waters delineation prior to development of the Subject Property.

Based upon the results of the Phase I, further environmental investigation is warranted.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I is to evaluate the Subject Property for current and historic sources of environmental concern, evidence of hazardous substance disposal or release from or onto the Subject Property, evidence of environmental threats from adjoining properties, and whether further environmental testing of the Subject Property is warranted.

2.2 Detailed Scope of Services

VET performed the Phase I at the Subject Property in accordance with the *ASTM Standard Practice for Environmental Site Assessments: Phase I ESA Process (Designation: E1527-21)*. The ASTM Standard incorporates the Federal EPA regulation of all appropriate inquiry (AAI) site assessment. The scope of

work included a historical review of the Subject Property's ownership and operations, a walk-through inspection of the Subject Property, a walk-through or drive-through reconnaissance of adjoining properties, and a review of select agency records, databases, and interviews of appropriate contacts familiar with the Subject Property. A list of persons interviewed is included as **Attachment 1**.

The Phase I included a vapor encroachment screen (VES). The VES investigation generally adheres to the Tier 1 and Tier 2 Screening process as defined in the *ASTM Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (Designation: E2600-10)*. The VES is intended to evaluate the potential for vapors to migrate on, or close to the Subject Property from on-site or off-site contaminated groundwater or soil. Approximate minimum search distances utilized are 0.10-mile for petroleum sites and 0.33-mile for other volatile contaminants of concern (COC) sites. The minimum search distances are further utilized in cases where final closure status of potential historic sources of contaminants is unknown.

It is VET's professional judgment that the scope of this investigation was sufficient to determine if further investigation is warranted, given the nature and specific circumstances of the Subject Property. The opinions rendered herein are based upon VET's best professional efforts in determining the environmental status of the Subject Property and, as such, are not a guarantee. VET's professional efforts embody the highest standards for assessing potential adverse environmental conditions at the time of this investigation.

2.3 Significant Assumptions

VET conducted this Phase I with the goal of assessing environmental conditions pertaining to suitability for municipal land uses at the Subject Property. This investigation does not evaluate or address all conceivable environmental conditions.

2.4 Limitations and Exceptions

The Phase I was conducted using the highest standard of diligence, care, and skill that experienced professionals in the field relevant to the Phase I would use under similar circumstances, at the period the Phase I was performed. VET relied on the information provided to it except to the extent that VET had actual knowledge that certain information was incorrect based on other information obtained in performing the Phase I or otherwise actually known to the environmental professional. The environmental professional reviewed reasonably ascertainable information from standard sources. Reasonably ascertainable information is described as 1) publicly available, 2) obtainable from its source within reasonable time and costs constraints, and 3) practically reviewable (ASTM, 2021). VET makes no representation concerning the legal significance of its findings or the value of the Subject Property investigated.

Karst features including karst sinkhole areas and karst sinkholes were observed or reported on the Subject Property and southern and western adjoining properties (IndianaMap, 2022). The scope of the Phase I did not include an inventory, detailed mapping or the evaluation of engineering or other considerations associated with karst topography features. The scope of the Phase I did not include an assessment of potential subsidence issues on the Subject Property.

The scope of the Phase I included an abbreviated visual search for potential wetland areas on the Subject Property. No formal wetland determination or delineation was conducted. The scope of the Phase I ESA did not include an in-depth assessment of any water resource related issues including wetlands, jurisdictional waterways, or flood issues.

This report does not constitute legal advice, nor does VET purport to give legal advice. Certain information contained in this report may be provided by agencies and/or personal interviews. VET will make no representations or warranties that such information is accurate or that any independent investigation, beyond the agreed-upon scope of services, has been or will be made to verify the accuracy of such information.

2.5 User Reliance

User is defined as the party seeking to use Practice E1527 to complete an ESA of the Subject Property. This includes a potential purchaser, a potential tenant, a current owner, a lender, a property manager, and others without limitation. The user of this Phase I report is the Monroe County Board of Commissioners. No entity other than the Monroe County Board of Commissioners is entitled to rely upon any information or opinions contained in this report.

2.6 Location and Legal Description

The Subject Property is located at the northeast corner of the intersection of South State Road 37 and West Fullerton Pike in Perry Township, Bloomington, Monroe County, Indiana (**Exhibit 1**). The Subject Property location is depicted on the area map provided (**Exhibit 1**). An aerial photo with approximate parcel boundaries shows the layout of the Subject Property and associated process areas (**Exhibit 2**). Aerial photographic documentation is provided in **Attachment 2**. The Subject Property is comprised of one parcel of vacant agricultural land located and described as:

TABLE 1. Location and Legal Description		
Parcel #	Legal	Acres
53-08-18-300-001.000-009	015-02520-01 PT SW 18-8-1W 87.12 A; Plat 11	87.13

VET obtained a quitclaim deed that includes a legal description of the Subject Property to identify parcel information. VET obtained documentation of Conservancy and Karst Easements at the Subject Property, approximate locations of which are shown on **Exhibit 4**. The quitclaim deed and easement documentation are included as **Attachment 3**. Title Records for the Subject Property can be found in **Section 3.2** of this report. The Subject Property is owned by Bill C. Brown Revocable Trust.

2.7 Subject Property and Vicinity General Characteristics

The Subject Property is in the Mitchell Plateau physiographic region of Indiana (IndianaMap, 2022) at an approximate elevation of 821' above mean sea level (MSL) (EDR Radius Map Report, 2022). The presence of karst topography features (sinkholes, swallow holes, sinking streams, etc.) is documented within the Mitchell Plateau physiographic region (Gray, 2000, p.8). The Property is reportedly in an area where drainage is mostly through solution channels (Hartke and Gray, 1989, p.4). Bedrock is mapped as Mississippian Age, Blue River Group containing mostly micritic, skeletal, and oolitic limestone (IndianaMap, 2022). Bedrock is shallow in this area and expected to be less than 50 feet below ground surface (Fenelon and Bobay, 1994, p.142).

The ground surface of the Subject Property slopes radially outward from the middle-western portion of the Subject Property at an approximate surface elevation of 822' above MSL toward the northern, eastern, and western boundaries of the Subject Property at approximate surface elevations of 780', 740',

and 804' feet above MSL, respectively. A local high elevation of 824' above MSL exists on the northern Subject Property boundary west of the eastern tree line. The local high elevation is attributed to suspect stockpiling of fill dirt or stripped topsoil from the Subject Property. Surface water runoff flows as sheet flow toward perennial streams on the northern and eastern Subject Property boundaries and toward a drainage ditch on the western Subject Property boundary. Storm water discharges from the Subject Property as channelized flow via the observed ephemeral and mapped perennial streams to Clear Creek from the northern and eastern Subject Property boundaries, and to a north-south trending drainage ditch along South State Road 37 to the west of the Subject Property. Surface water runoff from the Subject Property Discharges to Clear Creek, which is within the East Fork of the White River Basin.

2.8 Desktop Reconnaissance

The Subject Property location is depicted on the area map provided using graphics obtained from the United States Geological Survey (USGS) The National Map Topo Indiana Bloomington 7.5' (**Exhibit 1**). The area map extends more than one-quarter mile beyond the Subject Property boundaries. Four water wells are located within one-quarter mile of the Subject Property, according to the Indiana Department of Natural Resources (IDNR) Water Well Survey. Additional information on **Exhibit 1** was obtained from the Indiana Census TIGER 2000 and IGS Counties and the 2014 National Agricultural Imagery Program (NAIP).

Parcel Map

An aerial photo with approximate parcel boundaries shows the layout of the Subject Property and associated process areas (**Exhibit 2**). Graphics included on **Exhibit 2** are from the Monroe County Geographic Information Systems (GIS) 2022 Elevate Imagery and the 2019 United States Geological Survey's (USGS) The National Map Viewer (TNM Topo).

Wetlands and Flood Zones

Wetland features were not identified by the National Wetlands Inventory (NWI). Flood zones were not identified on the Subject Property based on review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) (**Exhibit 2**). Potential wetland features were observed during site reconnaissance at the Subject Property. The potential wetland features are displayed on **Exhibit 4**.

Water Resources

Water body features were identified on the Subject Property based on review of the USGS National Hydrography Database (NHD) (**Exhibit 2**). Perennial streams are located on the northern, eastern, and western Subject Property boundaries.

Soils

Soils on the Subject Property are mapped as Bedford Silt Loam, 2-6% Slopes (40.5%), Crider Silt Loam, 6-12% Slopes (36.3%), Hagerstown Silt Loam, 12-18% Slopes (17.2%), and Caneyville Silt Loam, 12-18% Slopes (5.9%) (**Exhibit 3**). A review of the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS) national list of hydric soils indicates that soils on the Subject Property are not included on the Hydric Soils List for Monroe County, Indiana (USDA, 2015).

Based on mapping resources, the drainage qualities of the soils on the Subject Property do not appear to present conditions favorable for wetland development. Soils information is from the USDA Web Soil Survey (WSS).

2.9 Current Use of the Subject Property

The Subject Property is currently vacant. Based on aerial photography, the Subject Property may have most recently been utilized as a staging area for equipment during the construction of Interstate 69.

2.10 Descriptions of Structures, Roads, and Other Improvements

There are no structures or roads on the Subject Property. Grading at the Subject Property that was evident during site reconnaissance and in historical aerial photographs is reported by the Subject Property owner to be the foundation of a roadway. See **Section 5.3** for additional discussion regarding improvements on the Subject Property.

Access to the Subject Property is provided by an unpaved access road via West Fullerton Pike. The Subject Property has electrical, water, and sanitary sewer service, according to Monroe County GIS records. The City of Bloomington Utilities Department (CBU) provides drinking water for the Subject Property and surrounding area. CBU obtains water from Monroe Reservoir, commonly known as Lake Monroe, located southeast of Bloomington. Water wells mapped within a quarter mile of the Subject Property may be associated with the adjacent quarry operations or private water supplies for residences. The Subject Property will be connected to the CBU public water supply. As such, groundwater is not expected to be utilized for drinking water at the Subject Property.

2.11 Current Uses of Adjoining Properties

The Phase I included a reconnaissance of the adjoining properties to identify any potential environmental problems that might adversely affect the Subject Property. Adjoining properties were visually inspected during walkovers from readily accessible public thoroughfares and the Subject Property. The Subject Property and adjoining properties are shown on **Exhibit 4**. Immediately adjoining properties are as follows:

TABLE 2. Current Uses of Adjoining Properties	
Direction	Description
North	Vacant wooded land located on an agricultural parcel, owned by Busted Block, LLC, adjoins the Subject Property to the north. Vacant land and an apparent quarry pond are located on an industrial parcel, owned by Duncan C. Campbell and Cathrine A. Spiaggia, adjoining the northeastern Subject Property boundary.
East	A limestone quarry operation adjoins the Subject Property to the east. The quarry operation exists on two industrial parcels owned by Professional Golfcar Corp. to the northeast of the Subject Property, and C&H Stone Company, Inc., to the east of the Subject Property.
South	An easement and West Fullerton Pike adjoin the Subject Property to the south. To the south of West Fullerton Pike lie residential parcels. To the southwest of the intersection of West Fullerton Pike and South State Road 37 lies a medical facility known as Monroe Medical Park.
West	State Road 37, also known as Interstate 69, adjoins the Subject Property to the west. To the west of State Road 37 lie residential parcels located along West Woodcreek Court, West Woodhaven Drive, and South Judd Avenue.

3.0 USER PROVIDED INFORMATION

3.1 User Questionnaire

Mr. Richard Crider, Facilities and Fleet Manager for the Monroe County Board of Commissioners was provided a User Questionnaire (Questionnaire) concerning the Subject Property. The Questionnaire is included in **Attachment 1**. Information from the Questionnaire is summarized in this report.

3.2 Title Records

A title search as outlined in the ASTM standard was conducted. Title information is utilized to help determine historic land use and to give guidance in locating persons knowledgeable about the Subject Property. Transfer records were examined, and the title was reviewed for a period of approximately 78 years for the Subject Property. Personnel within the Monroe County Recorder’s Office identified a quitclaim deed dated April 14, 2008 that includes statements regarding the transfer of title of the Subject Property.

City and county directories for the Subject Property were examined at the Monroe County Public Library. City directories from 1950 until 2020 were examined at a minimum of five-year intervals. Title records for Perry Township were searched to 1883. The available title records and city directory information is as follows:

TABLE 3. Title Records & City Directory Listings

VET and personnel within the Monroe County Recorder's Office were not able to locate title records prior to the above-referenced dates. The title records from 1978, 1910, 1904, and 1892 were for parcels with legal descriptions resembling that of the Subject Property, however these title records contain quarter indexes that are not included in the current legal description of the Subject Property. All information pertaining to the transfer of title for the Subject Property recorded in the tables above was obtained from the Monroe County Recorder's Office. Evaluation of Subject Property and adjacent parcel ownership prior to 1892 was not possible.

3.3 Environmental Liens or Activity and Use Limitations

Environmental liens or activity and use limitations (AULs) were not observed during the title search or reported in interviews. VET's search for environmental liens did not include any liens that may not be recorded.

3.4 Specialized Knowledge

The User did not report any specialized knowledge of the Subject Property.

3.5 Commonly Known or Reasonably Ascertainable Information

The User reported commonly known or reasonably ascertainable information beyond the information presented in this report. The User is aware of conservancy and karst easements at the Subject Property as well as a previous Phase I ESA conducted at the Subject Property. The User provided VET with documentation of the Conservancy and Karst Easements at the Subject Property, the approximate locations of which are displayed on **Exhibit 4**. The User also provided VET with the Phase I ESA that was previously conducted at the Subject Property dated February 25, 1997.

The 1997 Phase I ESA indicates that Bill C. Brown acquired the Subject Property on April 4, 1990 from the Professional Golfcar Corporation, that the Professional Golfcar Corporation acquired the Subject Property from Bloomington Limestone Company on December 22, 1986, and that Bloomington Limestone Company owned the Subject Property from 1927 to 1986. The Phase I ESA concluded that trash in a drainageway and photographic evidence of dumping north of a barn formerly located on the southern Subject Property boundary constituted an REC. The Phase I also identified a partly water-filled cistern beneath the garage of the barn as an REC.

The Phase II investigation included sampling of the stream bed sediment where trash and suspected dumping was identified, as well as water sampling from the water-filled cistern. Sediment samples were analyzed for metals, pesticides, polychlorinated biphenyls (PCBs), and total petroleum hydrocarbons (TPH). The water sample was analyzed for metals, pesticides, PCBs, TPH, and VOCs. Analytical results from the collected samples exhibited no detections of pesticides, PCBs, or VOCs. Analytical results from the sediment samples exhibited detections of TPH and metals below the applicable regulatory screening levels. No additional environmental work was recommended based on the results of the Phase II investigation. VET has no other commonly known or reasonably ascertainable information beyond the information presented in this report.

3.6 Valuation Reduction for Environmental Issues

Mr. Richard Crider did not report a valuation reduction for environmental issues on the Questionnaire. The Questionnaire is included in **Attachment 1**.

3.7 Owner, Manager, and Occupant Information

The Subject Property is owned and managed by Bill C. Brown Revocable Trust. See **Section 6.0** for a summary of the interview with the owner of the Subject Property.

3.8 Reason for Performing Phase I

The Monroe County Board of Commissioners commissioned this Phase I ESA as part of a due diligence investigation pursuant to purchase of the Subject Property.

4.0 RECORD REVIEW

4.1 EDR Record Review

Databases maintained by various state and federal agencies were reviewed. This included a review of agency database information compiled by Environmental Data Resources, Inc. (EDR), an information search firm that utilizes computer search techniques to query governmental agency database information for a specified geocoded area. An EDR Radius Report Map™ with GeoCheck® report dated July 28, 2022 included sites of interest that were erroneously mapped within the target search distances of 0.1 miles for petroleum products, 0.33 miles for COCs, and 0.5 miles for leaking underground storage tanks (LUST). VET determined that the correct addresses for the sites of interest are outside the respective search distances, and subsequently requested a revised EDR Report.

The revised EDR Report, dated August 10, 2022 was used to review agency records for sites geocoded within an approximate minimum search distance of the Subject Property. Abbreviations and acronyms utilized in this section are defined in the EDR report (**Attachment 4**). The EDR did not include the Subject Property as a site of interest. Descriptions of the EDR Report included the following responses:

Site	Address	Database	Distance / Direction	Relative Elev.
Indiana Quarries & Carvers, LLC	None Reported	US MINES	0.205 mi. ESE	Lower (722 ft.)
C&H Stone Co. Inc.	4000 Rockport Road	US MINES	0.239 mi. ESE	Lower (722 ft.)

Indiana Quarries & Carvers, LLC (IQC Site) and C&H Stone Co., Inc. (C&H Site) identified within the 0.33 mile search distance for COCs. The IQC Site and C&H Site are both likely located at the parcel currently owned by C&H Stone Company, Inc. Indiana Quarries & Carvers are listed as the operator for the quarry located at the C&H Site.

The Tier 2 identified the C&H Site has documented violations ranging from improper parking of equipment, failure to examine working places, failure to examine and correct safety defects, failure to install operating controls, failure to meet brake requirements for equipment, failure to meet requirements for electrical conductors, failure to meet berm or guardrail requirements for mobile equipment, failure to meet horn and backup alarm requirements for equipment, exceedances of permissible exposure levels for workers exposed to noise. None of the violations associated with the C&H Site are expected to have adverse environmental impacts on the Subject Property. Additionally, the C&H Site is located downgradient from

the Subject Property. Based on the Tier 2 VES, the above-referenced sites are not VECs based on review of the United States Mine database documentation and proximity of the sites to the Subject Property.

4.2 Leaking Underground Storage Tank (LUST) and Underground Storage Tank (UST) Sites

The EDR did not include responses for LUST and UST sites within the EDR defined 0.500-mile search distance from the Subject Property.

4.3 Vapor Encroachment Screen (VES) for Petroleum Sites

The EDR did not include responses for petroleum sites within the target search distance of 0.1 miles.

4.4 Vapor Encroachment Screen (VES) for Contaminants of Concern (COC) Sites

The EDR did not include responses for COC sites within the target search distance of 0.33 miles.

4.5 Physical Setting Sources

Aerial photographs were reviewed in conjunction with other sources to provide understanding of specific land uses observed on the Subject Property and adjoining parcels. Copies of select historic aerial photographs are included in **Attachment 2**.

TABLE 5. Aerial Photograph Summary		
Year	Quality	Description
1939	Fair	The Subject Property appears to be developed for agricultural purposes. The northern and eastern Subject Property boundaries and a portion of the western Subject Property boundary appear densely vegetated. No structures appear on the Subject Property. The northern adjacent parcel appears densely vegetated. To the northeast of the Subject Property in the northeastern corner of the photograph, there is a body of water likely associated with the quarry operations evident in subsequent photographs. The eastern adjacent parcel appears densely vegetated. West Fullerton Pike is visible to the south of the Subject Property. The parcels south of West Fullerton Pike appear to be developed for agricultural purposes, with one or two potential agricultural or residential structures. The western adjacent parcels appear to be developed for agricultural purposes. Numerous small depressions on the ground surface are visible to the west of the Subject Property, indicative of a dense karst area.
1946	Poor	The Subject Property appears relatively unchanged. The northern and northeastern adjacent parcels appear relatively unchanged. The eastern adjacent parcel appears to be developed for the quarry operations evident in subsequent photographs. West Fullerton Pike, the southern adjacent parcels, and the western adjacent parcels appear relatively unchanged. Pixelation in the photograph obscures a full visualization of the Subject Property and surrounding parcels.
1972	Good	The western portion of the Subject Property appears to be developed for agricultural purposes, with a small water body in the center of the agricultural field. The eastern portion of the Subject Property appears densely vegetated. A small structure is visible on the southwestern corner of the Subject Property. Quarry operations expanded to the northeast and east of the Subject Property and appear to be active. Stream features are evident on the northern Subject Property boundary flowing to the northwest. Additional residential structures appear along West Fullerton Pike to the south of the Subject Property. Bodies of water appear on the western Subject Property boundary as well as evidence of a path to the west of the Subject Property. A residential development is evident to the west of the Subject Property and the path.

1975	Good	The Subject Property appears relatively unchanged. State Road 37 is constructed immediately west of the Subject Property. The remainder of the northern, eastern, southern, and western adjacent parcels appears relatively unchanged, with the exception of expanded residential developments to the northwest of the Subject Property.
1999	Good	The structure on the southwestern corner of the Subject Property is no longer apparent. The body of water in the center of the cultivated field on the Subject Property is no longer apparent. The quarry operations to the northeast of the Subject Property appear to have diminished in size, while quarry operations to the east of the Subject Property appear larger than in previous photographs. The southern adjacent parcels appear relatively unchanged. Commercial development is evident along the southwestern boundary of the Subject Property, across State Road 37. The residential developments to the west and northwest of the Subject Property have increased in size.
2003	Good	The Subject Property and adjoining parcels appear relatively unchanged, with the exception of apparent expansion of the quarry operations to the east of the Subject Property.
2005	Excellent	The Subject Property appears relatively unchanged, with the exception of an apparent stream feature on the southeastern corner of Subject Property that was undiscernible in previous photographs. The stream feature appears to flow toward the quarry operation to the east. The commercial development to the west of the Subject Property appears to have large storage containers or tanks located near the intersection of West Fullerton Pike and State Road 37. Land disturbance associated with a large commercial development is evident to the southwest of the Subject Property.
2010	Excellent	The Subject Property exhibits evidence of a potential berm from the entrance of the Subject Property on the southern boundary extending to the eastern tree line. The possible storage containers or tanks at the intersection of West Fullerton Pike and State Road 37 are no longer apparent. One quarry pit on the eastern adjacent parcel appears larger than in previous photographs. The large commercial development to the southwest of the Subject Property appears to be active.
2015	Excellent	The cultivated portion of the Subject Property appears distinctly different in color from the surrounding wooded area, possibly indicative of recently cut hay. The large quarry pit on the eastern adjacent parcel exhibits signs of potential filling and is therefore reduced in size from previous photographs.
2016	Excellent	Land disturbing activities are apparent on the Subject Property, along West Fullerton Pike to the south of the Subject Property, and in the former commercial development west of the Subject Property at the intersection of West Fullerton Pike and State Road 37. The land disturbance is consistent with grading for road expansion or development. On the southern portion of the Subject Property, there appears to be a materials storage pile, although pixelation in the photograph obscures a full visualization of the items present. The land disturbance on the Subject Property indicates that the topsoil has been harvested in the south-central portion of the Subject Property. The remainder of the adjoining parcels appear relatively unchanged.
2019	Excellent	The Subject Property exhibits signs of paths and land disturbance extending from West Fullerton Pike on the southern Subject Property boundary to the northwestern Subject Property boundary. The paths on the Subject Property are consistent with tracks from heavy equipment, possibly associated with road development. A fill pile on the northern Subject Property boundary is apparent, immediately west of the eastern tree line. Two new interchanges are present at the intersection of West Fullerton Pike and State Road 37. The quarry operations to the east of the Subject Property appear to have expanded. The remainder of the adjoining parcels appears relatively unchanged.
2020	Excellent	Signs of vegetative overgrowth appear on the paths on the Subject Property. A water body appears in the center of the Subject Property. Stressed vegetation is apparent surrounding the paths and the water body. The quarry operations to the east of the Subject Property appear to have expanded. The remainder of the adjoining parcels appears relatively unchanged.

2022	Excellent	Evidence of the paths is still apparent on the Subject Property, although they are less distinct than in previous photographs, possibly due to seasonal variations in vegetative cover. The water body apparent in the 2020 photograph is no longer evident. The remainder of the Subject Property and adjoining parcels appear relatively unchanged.
------	-----------	---

Historical Topographic Maps were reviewed in conjunction with other sources to provide understanding of the elevation throughout time on the Subject Property and adjoining parcels. Copies of select historic topographic maps are included in **Attachment 2**.

Table 6. Topographic Map Summary	
Year	Description
1910	Surface elevation of the majority of the Subject Property appears to be at 800' above MSL, with a smaller area of higher elevation at the western Subject Property boundary. West Fullerton Pike is visible to the south of the Subject Property, with additional roads to the north, west, and east of the Subject Property. Intermittent streams are mapped to the north and east of the Subject Property flowing toward a northwest-southeast trending perennial stream. Depression contours indicative of a dense karst area are evident to the west of the Subject Property and extending to the western edge of the Topographic Map.
1965	The Topographic Map contains information for the southern third of the Subject Property only. The contours on the Subject Property appear consistent with those in the 1910 Topographic Map. A small water body is located on the southern third of the Subject Property, at the northwesternmost extent of the Topographic Map. Woods and brushwood are evident on the southeastern Subject Property boundary, to the southeast of the Subject Property, and to the southwest of the Subject Property. A dual highway, State Road 37, is constructed to the west of the Subject Property. Residential developments are evident to the southeast, south, and west of the Subject Property.
1966	The Topographic Map contains information for the northern two thirds of the Subject Property only. The contours on the Subject Property appear consistent with those in the 1910 Topographic Map. Woods and brushwood are evident on the eastern Subject Property boundary and to the north, east, and west of the Subject Property. The dual highway evident in the 1965 Topographic Map is no longer visible. Quarry operations are mapped to the east and northeast of the Subject Property. A residential development is mapped to the west of the Subject Property and labelled "Garden Acres."
1986	The Topographic Map does not display contours. Woods and brushwood are evident on the eastern Subject Property and to the north, east, southeast, and southwest of the Subject Property. Quarries are mapped to the east and northeast of the Subject Property. A primary road, State Road 37, is mapped along the western Subject Property boundary. Additional residential developments are apparent to the northeast of the Subject Property.
1998	The Topographic Map contains information for the northern two thirds of the Subject Property only. The vegetation and contours on the Subject Property appear consistent with those in the 1966 Topographic Map. Intricate surface area is mapped to the east and northeast of the Subject Property in the location of the quarry operations. The residential developments to the west of the Subject Property are mapped as urban area.
1999	The Topographic Map contains information for the southern third of the Subject Property only. The vegetation, water feature, and contours on the Subject Property appear consistent with those in the 1965 Topographic Map. The remainder of the Topographic Map is relatively unchanged from previous Topographic Maps.
2010	The Topographic Map does not display contours, vegetation, or the quarry operations mapped in previous Topographic Maps. The water body on the southwestern boundary of the Subject Property is still apparent. Water bodies likely associated with the quarry operations are mapped to the east and northeast of the Subject Property.
2013	The Topographic Map and surrounding developed areas appear relatively unchanged.
2016	The Topographic Map displays contours consistent with those mapped in the previous Topographic Maps. The water body on the southwestern boundary of the Subject Property is no longer visible. Marsh or swamp features are mapped to the east and northeast of the Subject Property.

2019	The Topographic map and surrounding developed areas appear relatively unchanged.
------	--

4.7 Historic Use of the Subject Property

See **Section 3.2** for documentation of City Directory listings for the Subject Property. Sanborn Map Coverage was not available for the Property.

4.8 Historic Use of Adjoining Properties

TABLE 7. Historic Use of Adjoining Properties	
Direction	Description
North	A quarry operated to the northeast of the Subject Property since at least 1946, and ceased active operations between 1975 and 1999. The northeastern adjacent parcel was owned by Duncan C. Campbell and Catherine A. Spiaggia since at least 2000. The northern adjacent parcel was vacant since at least 1939.
East	The eastern adjacent parcel is a quarry that has operated and continually expanded since at least 1946.
South	West Fullerton Pike adjoins the Subject Property to the south. The parcel directly south of the Subject Property was used for agricultural purposes or was vacant until development in 2016 into an interchange between West Fullerton Pike and Interstate 69. The southwest adjacent parcel is a single-family residential dwelling that has had various ownership and residency since approximately 1975.
West	The western-adjacent parcels have been utilized for residential purposes, with various ownership and residency since 1971.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

VET representatives Ms. Sara Hamidovic, MS, PE, CHMM, Ms. Rene Lloyd, MS, MPA, and Ms. Emily Throop conducted a site visit and site reconnaissance on August 2, 2022. VET looked for indications of environmental conditions on the Subject Property and adjoining properties. Photographs taken during VET’s site reconnaissance are included in **Attachment 2**.

5.2 Exterior Observations

The Phase I included a walkthrough inspection of the Subject Property and adjoining areas to identify indications of problematic environmental conditions. This phase of the investigation included a search for stressed vegetation, or other signs of environmental concern or land use that would pose a threat to the Subject Property. VET’s investigation was not restricted by weather conditions.

The Subject Property is located at the northeastern corner of the intersection between West Fullerton Pike and Interstate 69. Access to the Subject Property is provided by the northernmost roundabout exit on the roundabout east of Interstate 69 on West Fullerton Pike. The western half of the Subject Property is cleared and exhibited evidence of grading. VET observed a small pile of potential fill and sparse vegetation at the northwestern Subject Property corner. VET observed a large pile of potential fill material on the northern Subject Property boundary immediately west of the northeastern tree line. VET observed a man-made berm on the eastern Subject Property boundary with evidence of deteriorated silt fencing. Significant grade changes were observed near the southeastern tree line and on the southern portion of the Subject Property near the aforementioned roundabout. Interviews with the Subject Property owner revealed that the grading throughout the Subject Property was due to the construction of a roadway foundation and excavation of topsoil for sale. Although the Subject Property owner stated that no outside fill material was

used for the construction of the road foundation, the origin of the potential fill material on the northern Subject Property boundary is unknown. The uncertainty regarding the origin and nature of the potential fill material constitutes an REC.

Erosion control features including rock check dams were observed at the headwaters of the mapped streams on the Subject Property on the northwestern Subject Property boundary, the northeastern tree line, and the southern forested draw. VET observed hydrophytic vegetation throughout the western half of the Subject Property and along the eastern tree line of the Subject Property. Hydrophytic vegetation may be indicative of poorly drained soils or potential wetland features. VET observed an erosional gully west of the southern forested portion of the Subject Property. The eastern portion of the Subject Property is forested. VET observed likely jurisdictional streams in the eastern forested portion of the Subject Property that also exhibited signs of potential karst features. VET did not observe signs or conditions of environmental concerns in the forested area of the Subject Property.

One REC was observed on the exterior of the Subject Property. The uncertainty regarding the origin and nature of the potential fill material constitutes an REC. Signs of conditions that may indicate environmental impacts were observed.

5.3 Interior Observations

There are no structures or buildings on the Subject Property, therefore VET did not document interior observations.

6.0 INTERVIEWS

TABLE 8. Interviews		
Name	Description	Contact Number
Mr. Bill Brown	Owner	(812) 327-3868
Mr. Bill Brown is the owner of the Subject Property. Mr. Brown has been familiar with the Subject Property since 1984. VET interviewed Mr. Brown on August 3, 2022. According to Mr. Brown, the Subject Property was used for agricultural purposes historically. A barn and a residential structure were located on the Subject Property when he purchased it, but they were demolished in the early 1990s. Mr. Brown stated that no development occurred on the Subject Property until approximately 2015. Developments included laying the foundation for a road and excavation of topsoil for sale. Mr. Brown stated that the pile of potential fill dirt on the northeastern Subject Property boundary is likely a stockpile of topsoil originating from the Site that was not sold. Mr. Brown is aware of a Phase I ESA and Phase II investigation that were conducted in 1994 pursuant to a prospective purchase of the Subject Property. Mr. Brown is not certain whether RECs were discovered during the 1994 Phase I, but he stated that if there were any environmental concerns, they were handled during the Phase II investigation. Mr. Brown is not aware of any other past or present conditions at the Subject Property that may present adverse environmental impacts.		
Ms. Melissa Clark	Chief Financial Officer for Bill Brown	(812) 327-3868
Ms. Melissa Clark is the Chief Financial Officer for Bill Brown, the owner of the Subject Property. Ms. Clark has been familiar with the Subject Property since 1995. VET interviewed Ms. Clark on August 3, 2022. Ms. Clark stated that the Subject Property was developed around the time of the Interstate 69 expansion to include construction of a foundation for a road and clearing of topsoil for sale. Ms. Clark stated that no fill dirt was used to construct the road foundation. The grading was conducted with the soil existing on-site, according to Ms. Clark. Ms. Clark stated that a Phase I ESA and Phase II investigation were conducted in 1994 pursuant to a prospective purchase of the Subject Property. Ms. Clark provided VET with the Phase I ESA and Phase II reports on August 3, 2022. See Section 3.5 for discussion of the Phase I ESA and Phase II reports. Ms. Clark is not aware of any other past or present conditions at the Subject Property that may present adverse environmental impacts.		
Mr. Richard Crider	Facilities and Fleet Manager, Monroe County Board of Commissioners	(812) 803-6331

<p>Mr. Richard Crider is the Facilities and Fleet Manager for the Monroe County Board of Commissioners. Mr. Crider has been familiar with the Subject Property for approximately two months. VET interviewed Mr. Crider on August 8, 2022. Mr. Crider stated that he has not visited the Subject Property, but he is aware that there is a potential fill pile on the Subject Property that may warrant investigation. Mr. Crider is not aware of any present or historic commercial or industrial processes or other environmental concerns that would impact the Subject Property adversely.</p>		
Ms. Ashley Bergquist	Environmental Health Services Manager	(812) 803-6362
<p>VET submitted an information request to the Monroe County Health Department (MCHD) regarding the Subject Property on July 28, 2022. The MCHD provided information related to a spill incident in the IDEM Spill Reports Database (Incident Number 55941 on July 7, 2015). MCHD did not have documentation with details about the incident and directed VET to contact IDEM for more information. No other environmental records or complaints were located for the Subject Property pursuant to the information request. The information request email is included in Attachment 1.</p>		
Mr. Scott Frosch	Emergency Response On-Scene Coordinator	(317) 233-7745
<p>VET examined the IDEM Spill Database and located spill Incident Number 55941 from July 7, 2015. The incident source is classified as storm water construction and occurred at the Interstate 69 Project at Fullerton Pike and Indiana 37 South. The status of the incident is that it is currently “Assigned to Staff.” VET called the IDEM 24-Hour Emergency Spill Line on August 2, 2022 to inquire about the status of the spill incident. Mr. Scott Frosch of the IDEM Emergency Response Section returned VET’s call on August 2, 2022. Mr. Frosch stated that he located the Incident Number and explained that a caller inquired about the material stockpile at the Subject Property during the Interstate 69 expansion project. Mr. Frosch stated that an IDEM Storm Water Inspector visited the Subject Property subject to the call and confirmed the presence of material stockpiles. The inspector informed the responsible party that measures should be taken to prevent sediment runoff into nearby streams. The complaint was closed subsequent to the IDEM inspection. Mr. Frosch stated that no further action is necessary regarding Incident Number 55941.</p>		

7.0 FINDINGS/OPINION

Investigations and interviews with persons knowledgeable of the Property revealed potential sources of environmental concern on the Property. The Phase I identified the following Recognized RECs in connection with the Subject Property:

- VET observed evidence of grading and deposition of fill material on the Subject Property. The grading is reportedly a result of the construction of a road foundation that occurred around the year 2015. Additionally, topsoil was reportedly stripped from the Subject Property and sold around the year 2015. Although the grading and filling may be attributed to the construction of the road foundation or excavation of topsoil from the Subject Property, the origin and contents of the potential fill material on the northern Subject Property boundary is unknown and as such constitutes an REC.

The following non-scope considerations were identified during the Phase I:

- VET observed hydrophytic vegetation, likely jurisdictional streams, and potential karst features on the Subject Property. Based on the observed hydrophytic vegetation, mapped and observed karst features and streams, and erosional features, VET recommends a comprehensive wetlands and waters delineation prior to development of the Subject Property.

It is VET's professional opinion that environmental conditions exist that could pose a threat to the Subject Property and further investigation is warranted.

8.0 CONCLUSIONS

VET performed this Phase I in conformance with the scope and limitations of ASTM Practice E1527-21. Any exceptions to, or deletions from this practice are described in specific sections within this report. Qualifications of the environmental professional(s) that prepared and reviewed this Phase I are included as **Attachment 4**. Based upon the results of this Phase I further environmental investigation is warranted.

9.0 DEVIATIONS

No deviations were encountered during the completion of the Phase I.

10.0 ADDITIONAL SERVICES

No additional services beyond the stated scope of the Phase I were conducted.

11.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR § 312 and I have the specific education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

VET appreciates the opportunity to provide this Phase I ESA for the Monroe County Board of Commissioners. Please do not hesitate to contact VET at (812) 822-0400 if you have questions or concerns.

Respectfully submitted,

Sara Hamidovic, MS, PE, CHMM
Principal Engineer

INDIANA - EPA Map of Radon Zones

<http://www.epa.gov/radon/zonemap.html>

The purpose of this map is to assist National, State and local organizations to target their resources and to implement radon-resistant building codes.

This map is not intended to determine if a home in a given zone should be tested for radon. Homes with elevated levels of radon have been found in all three zones.

All homes should be tested, regardless of zone designation.

IMPORTANT: Consult the publication entitled "Preliminary Geologic Radon Potential Assessment of Indiana" (USGS Open-file Report 93-292-E) before using this map. <http://energy.cr.usgs.gov/radon/grpinfo.html> This document contains information on radon potential variations within counties. EPA also recommends that this map be supplemented with any available local data in order to further understand and predict the radon potential of a specific area.

All Appropriate Inquiry (AAI) User Questionnaire

Relationship to Property: (i.e. owner, buyer, lender)	Property Address (Address, City, State, Zip Code):	Project Number (For Office Use):
Buyer	South State Road 37 and West Fullerton Pike, Bloomington, Indiana 47403 (Parcel #53-08-18-300-001.000-009)	22-48

Question	Please Answer: (Yes, No, Not Applicable or Please Specify)
1. Have you performed a search of land title records for the <i>Property</i> ?	No
2. Are you aware of any liens, activity and use limitations (AULs), or other restrictions for the <i>Property</i> ? If yes, please specify.	Yes, Conservancy and Karst Easment
3. If the <i>Property</i> is being bought/sold, does the purchase price being paid for the <i>Property</i> reasonably reflect fair market value?	Yes
4. If you conclude that the <i>Property</i> is not being bought/sold at fair market value, is the decreased price a result of known contamination at the <i>Property</i> ?	
5. Are you aware of the past uses of the <i>Property</i> ? If yes, please provide approximate dates of occupancy with the respective occupant.	No
6. Are you aware of any specific chemical usage on the <i>Property</i> ? For example, if you know the <i>Property</i> currently or formerly used an underground storage tank or above-ground storage tank provide the relative size and contents (i.e. 1,000-gallon UST containing diesel) If yes, please specify known chemical usage.	No

7. Are you aware of any spills or chemical releases on the <i>Property</i> or adjoining properties? If yes, please specify.	No
8. Are you aware of any environmental cleanups on the <i>Property</i> ? If yes, please specify.	No
9. Are you aware of any individuals who may have historic or specialized knowledge about the <i>Property</i> ?	Bill C. Brown
10. Are you aware of any environmental reports for the <i>Property</i> (i.e. Phase I ESA)? If yes, please specify. Please provide reports, if available.	Yes, already provided.
11. Are you aware of any adverse environmental conditions on the <i>Property</i> or adjoining properties? If yes, please specify.	No

CONSERVANCY AND KARST EASEMENTS

THIS INDENTURE WITNESSETH, that Bill C. Brown Revocable Trust, hereinafter called GRANTOR, of Monroe County, State of Indiana grants to The City of Bloomington, the Grantee, for and in consideration of One Dollar (\$1.00) and other valuable consideration, the receipt of which is hereby acknowledged, Conservancy Easements and Karst Easements as defined below and as described on the attached exhibit "A"

Conservancy Easement – This easement is to protect natural areas and includes wooded areas, sloped areas, drainage ways and karst features. The following restrictions apply within the easement area;

- Any land disturbing activity including the placement of a fence, or alteration of any vegetative cover, including mowing, is prohibited in the easement area.
- Removal of dead or diseased trees that pose a safety risk or impede drainage as well as allowing the removal of exotic species is allowed only after first obtaining written approval from the City of Bloomington Planning & Transportation Department.
- In cases where removal of exotic invasive species is proposed, the restoration of disturbed areas with native plant material is allowed with written approval from the City of Bloomington Planning & Transportation Department prior to any proposed removal and restoration.
- Karst areas within this Conservancy Easement are also subject to any additional restrictions provided by the Karst Conservancy Easement.

Karst Easement – This easement is to protect the Karst features. The following restrictions apply within the easement area;

- No land disturbing activity, including the placement of a fence or the placement of any fill material is allowed within the easement area.
- No structures shall be located within 10 of the easement.
- Storm water discharge into the easement area shall not be substantially changed. The easement are shall not be used for storm water detention.
- Spring or cave entrances shall not be modified except for the placement of a gate to prevent human access.
- Mowing is allowed in the easement area. Removal of dead or diseased trees that pose a safety risk or impede draining as well as removal of exotic invasive species is allowed only after first obtaining written approval from the City of Bloomington Planning & Transportation Department.
- Right is granted to the City of Bloomington to enter the property to inspect the easement and alter or repair the karst feature.
- Any use of pesticides, herbicides, or fertilizers is prohibited within the easement area.

- Where removal of exotic invasive species is proposed, the restoration of the disturbed area with native plant material is allowed. Written approval of the City of Bloomington Planning & Transportation Department is required prior to any proposed removal and restoration.

IN WITNESS WHEREOF, the said Grantor has executed this instrument this _____ day of August, 2015.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL..... National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY..... Federal Facility Site Information listing
SEMS..... Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE..... Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS..... Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG..... RCRA - Large Quantity Generators
RCRA-SQG..... RCRA - Small Quantity Generators
RCRA-VSQG..... RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS..... Land Use Control Information System

EXECUTIVE SUMMARY

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROLS..... Institutional Controls Sites List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration.

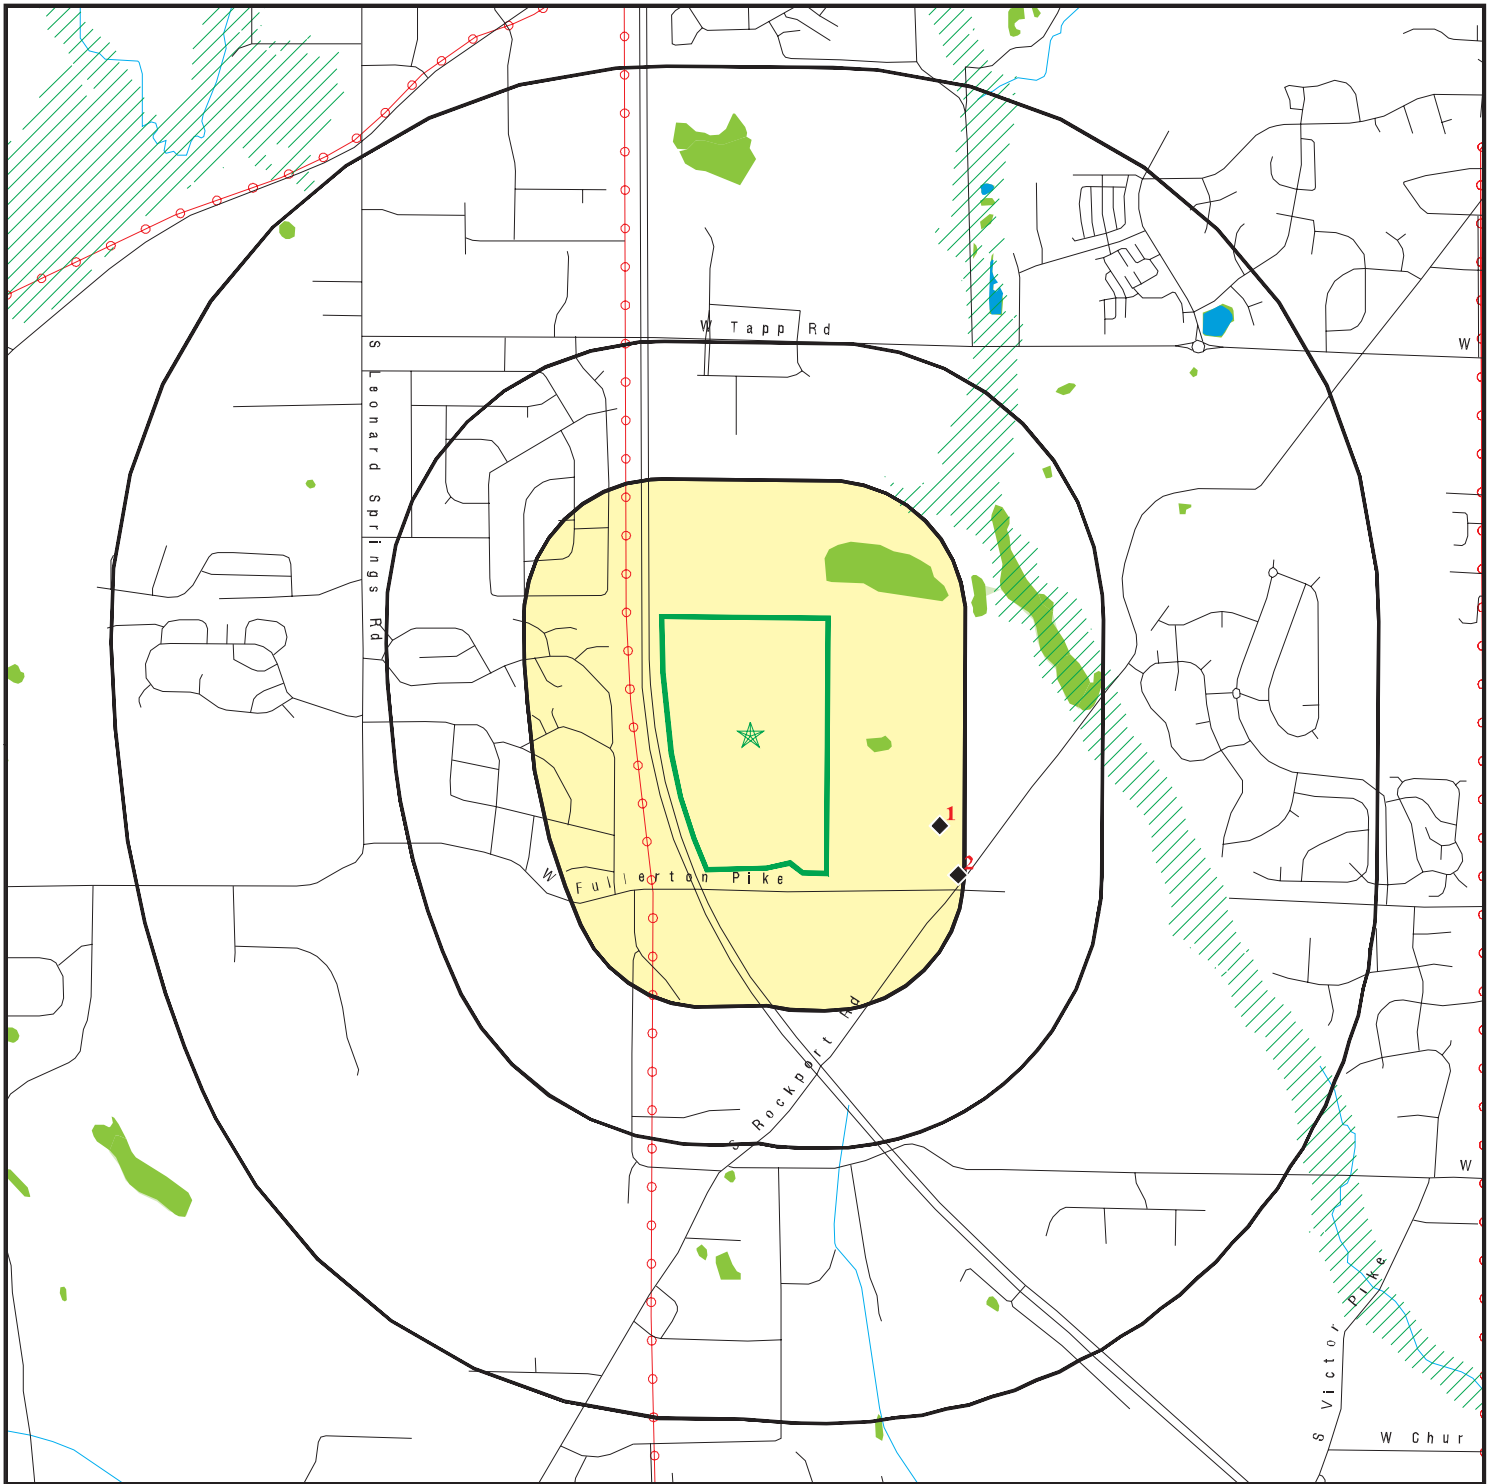

A review of the US MINES list, as provided by EDR, has revealed that there are 2 US MINES sites within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: N/A

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: 800-424-9346

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: 312-886-6186

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: 312-886-6186

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

SHWS: List of Hazardous Waste Response Sites Scored Using the Indiana Scoring Model

List of hazardous waste response sites scored utilizing the Indiana Scoring Model. The Indiana Scoring Model is a method of prioritizing, for state response actions, those hazardous substances response sites which are not on the National Priorities List. The ISM serves as the Commissioners management tool to address those sites which pose the most significant threat to human health and the environment in addition to assuring the departments resources are allocated accordingly.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A	Source: EDR, Inc.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

South Map: 13171400 CLEAR CREEK, IN
Version Date: 2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

18105C0231D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BLOOMINGTON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Bedford

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 46 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 1.41	Max: 5.5 Min: 3.5
2	9 inches	24 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 1.41	Max: 5.5 Min: 3.5
3	24 inches	51 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 1.41	Max: 5.5 Min: 3.5
4	51 inches	79 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 1.41	Max: 5.5 Min: 3.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Crider

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 250 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 4.23	Max: 7.3 Min: 4.5
2	7 inches	35 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 4.23	Max: 7.3 Min: 4.5
3	35 inches	79 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 14.11 Min: 4.23	Max: 7.3 Min: 4.5

Soil Map ID: 3

Soil Component Name: Hagerstown

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: US Fish & Wildlife Service

Telephone: 703-358-2171

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

1.0 EXECUTIVE SUMMARY

VET Environmental Engineering, LLC (VET) was obtained by Mr. Jeff Cockerill, representative of the Monroe County Board of Commissioners (Monroe County) to conduct a site reconnaissance of approximately 87.13 acres of land (Parcel Number 53-08-18-300-001.000-009) located at South State Road 37, north of West Fullerton Pike in Bloomington, Indiana (Site). The purpose of the project is to identify potential environmental impacts and other obstacles to development of the Site. The Site is the proposed location of a new municipal development project for Monroe County. VET conducted both a desktop and field reconnaissance to identify potential obstacles to development.

2.0 SITE INFORMATION

The 87.13-acre Site is located on one parcel of land located in Bloomington, Monroe County, Indiana. Parcel information is detailed in **Table A**. The Site is classified as vacant land and is owned by Bill C. Brown Revocable Trust. An approximately 530 feet wide section of forested land runs along the Site's eastern boundary and an approximately 300 foot wide section of forested land runs along the Site's northern boundary. The middle portion of the Site is largely an open grassy field.

TABLE A. PARCEL INFORMATION		
Parcel Number	Legal Description	Acreage
Parcel #1: 53-08-18-300-001.000-009	015-02520-01 PT SW 18-8-1W 87.12 A; Plat 11	87.13

3.0 DESKTOP RECONNAISSANCE

VET obtained and analyzed environmental and geographic data from IndianaMap. IndianaMap is a large collective public database for geographic information system (GIS) map data. The scope of the desktop reconnaissance is to identify items that may limit or restrict development or other proposed land uses on the Site by evaluating readily ascertainable records.

3.1 Soils

The United States Agricultural Department (USDA) Web Soil Survey (WSS) indicates that the Site is largely underlain by Bedford Silt Loam and Crider Silt Loam (**Exhibit 3**). All soils present on the Site are included in **Table B**. No soils mapped on-Site are classified as hydric soils according to the 2016 National Resources Conservation Service (NRCS) Hydric Soils List for Monroe County, Indiana.

TABLE B. SOIL SURVEY SUMMARY		
Map Symbol	Soil Type Name	Percent of Site (%)
BdB	Bedford Silt Loam, 2-6% Slopes	40.5
CrC	Crider Silt Loam, 6-12% Slopes	36.3
HaD	Hagerstown Silt Loam, 12-18% Slopes	17.2
CaD	Caneyville Silt Loam, 12-18% Slopes	5.9

3.2 Waterways and Waterbodies

The desktop reconnaissance identified six perennial streams on-Site according to the United States Geological Survey's (USGS) National Hydrography Dataset (NHD). Five of the streams are located within the forested area located along the northern and eastern Site boundaries. The streams along the Site's eastern boundary generally run from east to west toward the center of the Site. Streams along the northern boundary generally run north to south toward the center of the Site. The sixth stream is located on the western Site boundary and is coincident with a mapped karst feature (**Section 3.5**). All mapped waterbodies are displayed on **Exhibit 2**.

3.3 Floodplains

Floodplain data was obtained from the Federal Emergency Management Association (FEMA) Flood Rate Insurance Maps (FIRM). This data represents areas in Indiana that are located in a floodway or flood hazard zone. No floodways were identified on-Site.

3.4 Wetlands

No wetlands were identified on-Site by the National Wetlands Inventory (NWI).

3.5 Karst Features

Four karst features were identified on-Site along the Site's western boundary (IndianaMap, 2022). Several sinkholes were identified on the western adjoining properties. The Site is in the Mitchell Plateau physiographic region of Indiana (IndianaMap, 2022). The presence of karst topography features (sinkholes, swallow holes, sinking streams, etc.) is documented within the Mitchell Plateau physiographic region (Gray, 2000, p.8). The Site is reportedly in an area where drainage is mostly through solution channels (Hartke and Gray, 1989, p.4). Bedrock is mapped as Mississippian Age, Blue River Group containing mostly micritic, skeletal, and oolitic limestone (IndianaMap, 2022). Bedrock is shallow in this area and expected to be less than 50 feet below ground surface (Fenelon and Bobay, 1994, p.142).

3.6 Endangered and Threatened Species

VET utilized the Information for Planning and Consultation (IPaC) web service developed by the USFWS to screen the Site for endangered species, critical habitats, and migratory birds. According to IPaC, the endangered Indiana Bat (*Myotis sodalist*) and the threatened Northern Long-eared Bat (*Myotis septentrionalis*) are identified as potentially affected by the project area. The Site overlaps with the critical habitat for the Indiana Bat according to the USFWS's Environmental Conservation Online System (ECOS).

The Monarch Butterfly (*Danaus plexippus*) was identified as potentially affected by the project area. The Monarch Butterfly was identified as a candidate for listing as a threatened or endangered species. There are generally no requirements under Section 7 Endangered Species Act (ESA) for candidate species, according to the USFWS.

IPaC identified 13 migratory Birds of Conservation Concern (BCC). The common name, scientific name, and category of concern for each species identified is detailed in **Table C**. Ten birds were identified as "BCC Rangewide". This status indicates that these species are a BCC throughout the entirety of their range in the United States. IPaC identified two "BCC – BCR" birds. This status indicates that these species are of concern only in particular Bird Conservation Ranges (BCRs) in the United States. One species, the Bald Eagle, was listed as "Non-BCC Vulnerable". This status indicates that the species is not specifically

listed as a BCC, but is a species of concern due to requirements set forth by The Bald and Golden Eagle Protection Act (Eagle Act). The Eagle Act prohibits the take, possession, sale, or purchase of any dead or alive Bald Eagle (USFWS, 1940).

Due to the presence of several BCC species, VET recommends following the Nationwide Standard for Conservation Measures (**Attachment 4**), provided by the IPaC, to ensure minimal damage to potential habitats or breeding areas. The BCC 2021 study published by the Migratory Bird Program through the USFWS is included as part of **Attachment 4**.

TABLE C. MIGRATORY BIRDS OF CONCERN		
Common Name	Scientific Name	Category of Concern
Bald Eagle	<i>Haliaeetus leucocephalus</i>	Non-BCC Vulnerable
Black-billed Cuckoo	<i>Coccyzus erythrophthalmus</i>	BCC Rangewide
Cerulean Warbler	<i>Dendroica cerulea</i>	BCC Rangewide
Chimney Swift	<i>Chaetura pelagica</i>	BCC Rangewide
Eastern Whippoorwill	<i>Antrostomus vociferus</i>	BCC Rangewide
Field Sparrow	<i>Spizella pusilla</i>	BCC – BCR
Kentucky Warbler	<i>Oporornis formosus</i>	BCC Rangewide
Lesser Yellowlegs	<i>Tringa flavipes</i>	BCC Rangewide
Prairie Warbler	<i>Dendroica discolor</i>	BCC Rangewide
Prothonotary Warbler	<i>Protonotaria citrea</i>	BCC Rangewide
Red-headed Woodpecker	<i>Melanerpes erythrocephalus</i>	BCC Rangewide
Rusty Blackbird	<i>Euphagus carolinus</i>	BCC – BCR
Wood Thrush	<i>Hylocichla mustelina</i>	BCC Rangewide

VET requested information on endangered and threatened species, high quality natural communities, and natural areas from the Indiana Department of Natural Resources (IDNR) Indiana Natural Heritage Data Center (INHDC) on July 28, 2022. VET received IDNR’s response on August 8, 2022. The Heritage Data Review indicates that eight threatened or endangered species are documented within a half-mile of the Site (**Table D**).

TABLE D. INDIANA HERITAGE DATA – ENDANGERED AND THREATENED SPECIES			
Common Name	Scientific Name	State	Federal
Troglobitic Crayfish	<i>Orconectes inermis testii</i>	SR	N/A
Hilly Springtail	<i>Pseudosinella collina</i>	SR	N/A
Monroe Cave Ground Beetle	<i>Pseudanophthalmus shilohensis mayfieldensis</i>	SE	N/A
An Agapetus Caddisfly	<i>Agapetus gelbae</i>	ST	N/A
Little Brown Bat	<i>Myotis lucifugus</i>	SE	C
Northern Long Eared Bat	<i>Myotis septentrionalis</i>	SE	T and PE
Tricolored Bat	<i>Perimyotis subflavus</i>	SE	N/A
Hidden Springs Snail	<i>Fontigens cryptica</i>	SE	N/A
Legend			
SE = State Endangered	SR = State Rare	PE = Potentially Endangered	
ST = State Threatened	C = Federal Candidate Species	N/A = Not listed	

The Heritage Data Review specified that these findings do not preclude the requirement for formal consultation through the United States Fish and Wildlife Service (USFWS) under Section 7 of the ESA. A copy of the Heritage Data Review is included as **Attachment 2**. Due to the species potentially affected by the proposed project, a formal Section 7 ESA consultation may be required. VET recommends following the Nationwide Standard for Conservation Measures and minimizing disturbance to forested areas on-Site to ensure minimal damage to potential habitats or breeding grounds due to the species potentially affected by the proposed project.

3.7 Wells

The IDNR Water Well Survey identified no wells on-Site. VET requested a Wellhead Protection Area Proximity Determination from IDEM’s Groundwater Section on July 28, 2022. VET has not received the Wellhead Protection Area Proximity Determination from IDEM as of the date of this report. In addition to requesting the Wellhead Protection Area Proximity Determination, VET queried the Site in the IDEM Wellhead Proximity Determinator database on July 28, 2022. The database indicates that the Site is not located within a Wellhead Protection Area. A copy of the output from the database query along with the Wellhead Protection Area Proximity Determination request is included in **Attachment 3**.

The City of Bloomington Utilities Department (CBU) provides drinking water for the Site and surrounding area. CBU obtains drinking water from Lake Monroe, a surface water reservoir located southeast of Bloomington, Indiana. Groundwater is not utilized for drinking water in this area of Bloomington. Four wells are located within a 0.25-mile radius of the Site.

3.8 Conservancy and Karst Easements

The Site’s current owner recorded conservancy and karst easements for the Site on August 18, 2015 at the Monroe County Recorder’s Office. Smith Design Group, Inc. (Smith), formerly Smith Brehob and Associates, Inc. (Brehob), prepared the legal descriptions of the easements and the figure documenting the location of the easements. A copy of the easements is included as **Attachment 5**.

The easements were recorded to protect natural areas and karst features identified on-Site. There are four conservancy easements (Conservancy ‘A’ through ‘D’) and five karst easements (Karst ‘A’ through ‘E’). The areas are displayed graphically on **Exhibit 4**. The document specifies several requirements including the prohibition of land disturbing activity, mowing restrictions, and explicit approval from the City of Bloomington Planning & Transportation Department to conduct maintenance within the easements such as removal of dead trees and/or invasive species.

3.9 Historical Aerial Photographs

VET examined historical aerial photographs. Select historical aerial photographs are included as **Attachment 6**.

TABLE E. AERIAL PHOTOGRAPH SUMMARY		
Year	Quality	Description
1939	Fair	The Site appears to be developed for agricultural purposes. The northern and eastern Site boundaries and a portion of the western Site boundary appear densely vegetated. No structures appear on the Site. The northern adjacent parcel appears densely vegetated. To the northeast of the Site in the northeastern corner of the photograph, there is a body of water likely associated with the quarry operations evident in subsequent photographs. The

		eastern adjacent parcel appears densely vegetated. West Fullerton Pike is visible to the south of the Site. The parcels south of West Fullerton Pike appear to be developed for agricultural purposes, with one or two potential agricultural or residential structures. The western adjacent parcels appear to be developed for agricultural purposes. Potential staining or warping is evident on the western half of the photograph, although these areas may also be small depressions in the ground surface.
1946	Poor	The Site appears relatively unchanged. The northern and northeastern adjacent parcels appear relatively unchanged. The eastern adjacent parcel appears to be developed for the quarry operations evident in subsequent photographs. West Fullerton Pike, the southern adjacent parcels, and the western adjacent parcels appear relatively unchanged. Pixelation in the photograph obscures a full visualization of the Site and surrounding parcels.
1972	Good	The western portion of the Site appears to be developed for agricultural purposes, with a small water body in the center of the agricultural field. The eastern portion of the Site appears densely vegetated. A small structure is visible on the southwestern corner of the Site. Quarry operations expanded to the northeast and east of the Site and appear to be active. Stream features are evident on the northern Site boundary flowing to the northwest. Additional residential structures appear along West Fullerton Pike to the south of the Site. Bodies of water appear on the western Site boundary as well as evidence of a path to the west of the Site. A residential development is evident to the west of the Site and the path.
1975	Good	The Site appears relatively unchanged. State Road 37 is constructed immediately west of the Site. The remainder of the northern, eastern, southern, and western adjacent parcels appears relatively unchanged, with the exception of expanded residential developments to the northwest of the Site.
1999	Good	The structure on the southwestern corner of the Site is no longer apparent. The body of water in the center of the cultivated field on the Site is no longer apparent. The quarry operations to the northeast of the Site appears to have diminished in size, while quarry operations to the east of the Site appear larger than in previous photographs. The southern adjacent parcels appear relatively unchanged. Commercial development is evident along the southwestern boundary of the Site, across State Road 37. The residential developments to the west and northwest of the Site have increased in size.
2003	Good	The Site and adjoining parcels appear relatively unchanged, with the exception of apparent expansion of the quarry operations to the east of the Site.
2005	Excellent	The Site appears relatively unchanged, with the exception of an apparent stream feature on the southeastern corner of Site that was undiscernible in previous photographs. The stream feature appears to flow toward the quarry operation to the east. The commercial development to the west of the Site appears to have large storage containers or tanks located near the intersection of West Fullerton Pike and State Road 37. Land disturbance associated with a large commercial development is evident to the southwest of the Site.
2010	Excellent	The Site exhibits evidence of a potential berm from the entrance of the Site on the southern boundary extending to the eastern tree line. The possible storage containers or tanks at the intersection of West Fullerton Pike and State Road 37 are no longer apparent. One quarry pit on the eastern adjacent parcel appears larger than in previous photographs. The large commercial development to the southwest of the Site appears to be active.
2015	Excellent	The cultivated portion of the Site appears distinctly different in color from the surrounding wooded area, possibly indicative of recently cut hay. The large quarry pit on the eastern adjacent parcel exhibits signs of potential filling and is therefore reduced in size from previous photographs.
2016	Excellent	Land disturbing activities are apparent on the Site, along West Fullerton Pike to the south of the Site, and in the former commercial development west of the Site at the intersection of West Fullerton Pike and State Road 37. The land disturbance is consistent with grading for road expansion or development. On the southern portion of the Site, there appears to be a materials storage pile, although pixelation in the photograph obscures a full visualization of the items present. The land disturbance on the Site indicates that the topsoil has been harvested in the south-central portion of the Site. The remainder of the adjoining parcels appear relatively unchanged.

2019	Excellent	The Site exhibits signs of paths and land disturbance extending from West Fullerton Pike on the southern Site boundary to the northwestern Site boundary. The paths on the Site are consistent with tracks from heavy equipment, possibly associated with road development. A fill pile on the northern Site boundary is apparent, immediately west of the eastern tree line. Two new interchanges are present at the intersection of West Fullerton Pike and State Road 37. The quarry operations to the east of the Site appear to have expanded. The remainder of the adjoining parcels appears relatively unchanged.
2020	Excellent	Signs of vegetative overgrowth appear on the paths on the Site. A water body appears in the center of the Site. Stressed vegetation is apparent surrounding the paths and the water body. The quarry operations to the east of the Site appear to have expanded. The remainder of the adjoining parcels appears relatively unchanged.
2022	Excellent	Evidence of the paths is still apparent on the Site, although they are less distinct than in previous photographs, possibly due to seasonal variations in vegetative cover. The water body apparent in the 2020 photograph is no longer evident. The remainder of the Site and adjoining parcels appear relatively unchanged.

Aerial photographs indicate the presence of stream features that may constitute jurisdictional waters. Evidence of extensive modification, including grading and filling, is visible on historical aerial photographs.

4.0 FIELD RECONNAISSANCE

VET representatives Ms. Sara Hamidovic, MS, PE, CHMM, Ms. Rene Lloyd, MS, MPA, and Ms. Emily Throop conducted a field reconnaissance on August 2, 2022. The purpose of the field investigation was to verify the accuracy of the information reviewed during the desktop reconnaissance and to identify features of concern that were not identified by the desktop reconnaissance. No formal wetlands or waters delineations were conducted. Select photos taken during the field reconnaissance are included as **Attachment 1**.

The Site is located at the northeastern corner of the intersection between West Fullerton Pike and Interstate 69. Access to the Site is provided by the northernmost roundabout exit on the roundabout east of Interstate 69 on West Fullerton Pike. The western half of the Site is cleared and exhibited evidence of grading. VET observed a small pile of potential fill and sparse vegetation at the northwestern Site corner. VET observed a large pile of potential fill material on the northern Site boundary immediately west of the northeastern tree line. VET observed a man-made berm on the eastern Site boundary with evidence of deteriorated silt fencing. Significant grade changes were observed near the southeastern tree line and on the southern portion of the Site near the aforementioned roundabout. The Site owner indicated that grading throughout the Site was due to the construction of a roadway foundation and excavation of topsoil for sale. Although the Site owner stated that no outside fill material was used for the construction of the road foundation, the origin of the potential fill material on the northern Site boundary is unknown.

Erosion control features including rock check dams were observed at the headwaters of the mapped streams on the Site on the northwestern Site boundary, the northeastern tree line, and the southern forested draw. VET observed large areas of hydrophytic vegetation throughout the western half of the Site and along the eastern tree line of the Site. Additional isolated pockets dominated by hydrophytic vegetation were identified across the grassy area of the Site. These pockets are likely indicative of areas where topsoil was harvested changing the drainage qualities of the soils allowing water to pool for extended periods of time during the growing season. A dominance of hydrophytic vegetation is indicative of presence of poorly

drained soils and is one of the three indicators of wetlands. VET observed an erosional gully west of the southern forested portion of the Site. The eastern portion of the Site is forested. VET observed likely jurisdictional streams in the northern and eastern forested portions of the Site that also exhibited signs of potential karst features. VET did not observe signs or conditions of environmental concerns in the forested area of the Site.

4.1 Soils

No soils mapped on-Site are classified as hydric soils according to the 2016 NRCS Hydric Soils List for Monroe County, Indiana. According to on-Site observations and interviews conducted with individuals knowledgeable about the Site, there is evidence of extensive grading and deposition of fill material on the Site. The grading is reportedly a result of the construction of a road foundation that occurred around the year 2015. Additionally, topsoil was reportedly stripped from the Site and sold around the year 2015. The extensive modification of the Site, to include grading and filling, likely altered the soil composition and drainage characteristics of Site soils.

4.2 Waterways and Waterbodies

The desktop reconnaissance identified six perennial streams on-Site within the forested portion of the Site (**Exhibit 4**). VET observed several surface drainage features, likely ephemeral streams, within the forested area on the Site that were not identified by the NHD. The United States Army Corps of Engineers (USACE) defines an ephemeral stream as “*having flowing water only during, and for a short duration after, precipitation events in a typical year.*” The identified streams are likely classified as ephemeral at the higher elevation areas originating from the flat grassy portions of the Site. As the drainage features travel down slope the features may exhibit flow absent precipitation due to groundwater influences. The observed drainage features likely constitute jurisdictional waters from the grassy field to the Site boundaries. VET observed a potentially jurisdictional stream on the northeastern portion of the Site that exhibited signs of potential karst features. This feature is located within the Karst ‘B’ easement and exhibited characteristics consistent with a sinking stream. VET recommends conducting a formal jurisdictional waters delineation to determine the regulatory status of all water features on-Site.

4.3 Wetlands

No mapped wetlands were identified during the desktop reconnaissance. However, field observations indicate the presence of potential wetlands. VET observed several isolated, perched wetlands in the grassy field during the field reconnaissance. Topsoil was stripped and transported off-Site around 2015, according to interviews with the Site owner. The removal of topsoil exposed the underlying clay soil. This altered the composition and drainage qualities of Site soils. Infiltration likely decreased due to the low permeability of the exposed clay soil and likely created conditions favorable for wetland development.

VET identified a potential linear wetland on the eastern portion of the Site, between the forested area and grassy field. A manmade berm generally runs north to south along the central portion of the eastern forest line. A linear depression runs parallel and upgradient to the berm. Presence of hydrophytic vegetation was identified in the depression. The manmade berm likely encouraged water to pond on the western, upgradient side and subsequently created a linear wetland feature (**Exhibit 4**).

VET identified another potential wetland on the northwestern Site boundary (**Exhibit 4**). The potential wetland is coincident with mapped karst features and a perennial stream. VET observed evidence of both hydrophytic vegetation area and several wetland hydrology indicators. The hydrophytic plant community present in this area exhibits a number of species. Only one invasive species (Common Reed – *Phragmites australis*) was observed in this area. Both the size and biodiversity in vegetation in this area suggest this area is a high-quality wetland that supports a variety of species and likely constitutes a regulated wetland. Further, care should be taken to protect this feature during development.

Wetlands are regulated by IDEM and the USACE as they provide filtration, flood storage, and habitat. Construction in wetlands is typically subject to permitting requirements and/or compensatory mitigation. In VET's experience, wetland area published by NWI is typically less extensive than wetlands identified by formal field delineation methodology. VET recommends conducting a formal wetland delineation of the Site during the growing season to determine the presence or absence of regulated wetlands.

4.4 Karst Features

IndianaMap identified four karst features on-Site. Three features are located on the northwestern portion of the Site and are generally coincident with a mapped perennial stream and the potential high-quality wetland observed on-Site (**Exhibit 4**). The fourth feature is located directly south of the other mapped karst features, along the Site's western boundary. This feature is located within an easement (Karst 'A') recorded by the current Site owner in 2015.

Monroe County Ordinance, Chapter 829: Karst and Sinkhole Development Standards contains detailed requirements regarding sinkhole evaluations and sinkhole conservation areas (SCAs). Five karst easements are already mapped and recorded for the Site (**Attachment 5**). Three karst features identified on-Site by IndianaMap are outside the existing easements. As such, VET recommends establishing SCAs pursuant to Monroe County Ordinance 829-3(C) for the remaining sinkholes and performing a formal sinkhole evaluation in accordance with Monroe County Ordinance 829-4(A). A copy of the ordinance is included as **Attachment 7**. Additionally, VET recommends having an environmental professional on-call for consultation during grading and construction in the event that additional karst features are identified.

4.5 Wells

No wells were identified on-Site during the desktop reconnaissance or the field reconnaissance. If a well is identified during development activities, it should be protected as the well may serve as a conduit to the subsurface water bearing zone. Subsequent to discovery, the well should be adequately restored or properly abandoned.

5.0 CONCLUSIONS

VET performed a desktop reconnaissance coupled with a field reconnaissance to identify obstacles that may impede development of the Site. VET identified potentially regulated wetlands and potentially jurisdictional streams on-Site. VET recommends conducting a formal wetland delineation and jurisdictional waterways determination prior to development of the Site as permitting and compensatory mitigation may be required through USACE and/or IDEM. VET recommends following the Nationwide Standard for Conservation Measures to ensure minimal damage to potential habitats or breeding grounds

due to the species potentially affected by the proposed project. VET recommends conducting a formal sinkhole evaluation and establishing SCAs as necessary to protect mapped karst features located outside the established karst easements. Development is prohibited within the existing easements on-Site.

If you have any questions or concerns regarding this report, please do not hesitate to contact VET at (812) 822-0400.

Respectfully submitted,

Sara R. Hamidovic, MS, PE, CHMM, CPESC
Principal Engineer, President/CEO

DATA REQUEST

State Form 56461 (R3 / 4-21)
DEPARTMENT OF NATURAL RESOURCES

Please submit this form by e-mail:

INHDCdatarequest@dnr.IN.gov

Or fax: 317-974-2008

Or mail:

Indiana Natural Heritage Data Center
IN DNR Nature Preserves
402 W. Washington Street, Rm W267
Indianapolis, Indiana 46204

INSTRUCTIONS: E-mail, fax, or mail to contact above:

1. This completed **Data Request form**. Form and information available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.
2. A **map** showing the project location and extent, include the nearest major road intersection for verification. Additional pages showing the general area may be provided. Construction CAD drawings are not required or needed.
3. If the project boundary is large, complex, or a linear corridor, please provide a **GIS shapefile**.
4. The **charge is \$42** per one half hour, one half hour minimum, per IC 14-10-2-1. An invoice will be included with the completed request response. This fee is waived for non-profit organizations, other governmental agencies, and educational research projects.
5. Please feel free to include any further information that you believe will help us best serve your project needs.

Date submitted (month, day, year)	July 28, 2022

Elizabeth Grubb
VET Environmental Engineering, LLC
2335 West Fountain Drive
Bloomington, IN 47404

Dear Elizabeth Grubb:

I am responding to your request for information on the threatened or endangered (T&E) species, high quality natural communities, and natural areas for the Fullerton Pike Parcel located within Monroe County, Indiana. The Indiana Natural Heritage Data Center has been checked and included you will find a datasheet with information on the T&E species documented within 0.5 mile of the project area.

If you need a review of the impacts to the animal species mentioned or a general environmental review, you can submit the project information to Christie Stanifer, DNR Environmental Coordinator, at environmentalreview@dnr.in.gov (preferred), or send to the street address below. For more help or guidance contact Christie Stanifer at cstanifer@dnr.in.gov.

Department of Natural Resources
Environmental Review
Division of Fish and Wildlife
402 W. Washington Street, Room W273
Indianapolis, IN 46204

The information I am providing does not preclude the requirement for further consultation with the U.S. Fish and Wildlife Service as required under Section 7 of the Endangered Species Act of 1973. If you have concerns about potential Endangered Species Act issues you should contact the Service at their Bloomington, Indiana office.

U.S. Fish and Wildlife Service
620 South Walker St.
Bloomington, Indiana 47403-2121
(812)334-4261

Please note that the Indiana Natural Heritage Data Center relies on the observations of many individuals for our data. In most cases, the information is not the result of comprehensive field surveys conducted at particular sites. Therefore, our statement that there are no documented significant natural features at a site should not be interpreted to mean that the site does not support special plants or animals.

Due to the dynamic nature and sensitivity of the data, this information should not be used for any project other than that for which it was originally intended. It may be necessary for you to request updated material from us in order to base your planning decisions on the most current information.

Thank you for contacting the Indiana Natural Heritage Data Center. You may reach me at (317)233-2558 if you have any questions or need additional information.

Sincerely,

A handwritten signature in cursive script that reads "Taylor Davis". The signature is written in black ink on a white background.

Taylor Davis

NATIONWIDE STANDARD CONSERVATION MEASURES

Listed below are effective measures that should be employed at all project development sites nationwide with the goal of reducing impacts to birds and their habitats. These measures are grouped into three categories: General, Habitat Protection, and Stressor Management. These measures may be updated through time. We recommend checking the Conservation Measures website regularly for the most up-to-date list.

1. General Measures

- a. Educate all employees, contractors, and/or site visitors of relevant rules and regulations that protect wildlife. See the Service webpage on [Regulations and Policies](#) for more information on regulations that protect migratory birds.
- b. Prior to removal of an inactive nest, ensure that the nest is not protected under the Endangered Species Act (ESA) or the Bald and Golden Eagle Protection Act (BGEPA). Nests protected under ESA or BGEPA cannot be removed without a valid permit.
 - i. See the [Service Nest Destruction Policy](#)
- c. Do not collect birds (live or dead) or their parts (e.g., feathers) or nests without a valid permit. Please visit the [Service permits page](#) for more information on permits and permit applications.
- d. Provide enclosed solid waste receptacles at all project areas. Non-hazardous solid waste (trash) would be collected and deposited in the on-site receptacles. Solid waste would be collected and disposed of by a local waste disposal contractor. For more information about solid waste and how to properly dispose of it, see the [EPA Non-Hazardous Waste](#) website.
- e. Report any incidental take of a migratory bird, to the [local Service Office of Law Enforcement](#).
- f. Consult and follow applicable [Service industry guidance](#).

2. Habitat Protection

- a. Minimize project creep by clearly delineating and maintaining project boundaries (including staging areas).
- b. Consult all local, State, and Federal regulations for the development of an appropriate buffer distance between development site and any wetland or waterway. For more information on wetland protection regulations see the Clean Water Act sections [401](#) and [404](#).
- c. Maximize use of disturbed land for all project activities (i.e., siting, lay-down areas, and construction).
- d. Implement standard soil erosion and dust control measures. For example:
 - i. Establish vegetation cover to stabilize soil
 - ii. Use erosion blankets to prevent soil loss
 - iii. Water bare soil to prevent wind erosion and dust issues

3. Stressor Management

Stressor: Vegetation Removal

Conservation Goal: Avoid direct take of adults, chicks, or eggs.

Conservation Measure 1: Schedule all vegetation removal, trimming, and grading of vegetated areas outside of the peak bird breeding season to the maximum extent practicable. Use available resources, such as internet-based tools (e.g., the FWS's Information, Planning and Conservation system and Avian Knowledge Network) to identify peak breeding months for local bird species; or, contact local Service Migratory Bird Program Office for breeding bird information.

Conservation Measure 2: When project activities cannot occur outside the bird nesting season, conduct surveys prior to scheduled activity to determine if active nests are present within the area of impact and buffer any nesting locations found during surveys.

- 1) Generally, the surveys should be conducted no more than five days prior to scheduled activity.
- 2) Timing and dimensions of the area to be surveyed vary and will depend on the nature of the project, location, and expected level of vegetation disturbance.
- 3) If active nests or breeding behavior (e.g., courtship, nest building, territorial defense, etc.) are detected during these surveys, no vegetation removal activities should be conducted until nestlings have fledged or the nest fails or breeding behaviors are no longer observed. If the activity must occur, establish a buffer zone around the nest and no activities will occur within that zone until nestlings have fledged and left the nest area. The dimension of the buffer zone will depend on the proposed activity, habitat type, and species present and should be coordinated with the local or regional Service office.
- 4) When establishing a buffer zone, construct a barrier (e.g., plastic fencing) to protect the area. If the fence is knocked down or destroyed, work will suspend wholly, or in part, until the fence is satisfactorily repaired.
- 5) When establishing a buffer zone, a qualified biologist will be present onsite to serve as a biological monitor during vegetation clearing and grading activities to ensure no take of migratory birds occurs. Prior to vegetation clearing, the monitor will ensure that the limits of construction have been properly staked and are readily identifiable. Any associated project activities that are inconsistent with the applicable conservation measures, and activities that may result in the take of migratory birds will be immediately halted and reported to the appropriate Service office within 24 hours.
- 6) If establishing a buffer zone is not feasible, contact the Service for guidance to minimize impacts to migratory birds associated with the proposed project or removal of an active nest. Active nests may only be removed if you receive a permit from your local Migratory Bird Permit Office. A permit may authorize active nest removal by a qualified biologist with bird handling experience or by a permitted bird rehabilitator.

Conservation Measure 3: Prepare a vegetation maintenance plan that outlines vegetation maintenance activities and schedules so that direct bird impacts do not occur.

Stressor: Invasive Species Introduction

Conservation Goal: Prevent the introduction of invasive plants.

Conservation Measure 1: Prepare a weed abatement plan that outlines the areas where weed abatement is required and the schedule and method of activities to ensure bird impacts are avoided.

Conservation Measure 2: For temporary and permanent habitat restoration/enhancement, use only native and local (when possible) seed and plant stock.

Conservation Measure 3: Consider creating vehicle wash stations prior to entering sensitive habitat areas to prevent accidental introduction of non-native plants.

Conservation Measure 4: Remove invasive/exotic species that pose an attractive nuisance to migratory birds.

Stressor: Artificial Lighting

Conservation Goal: Prevent increase in lighting of native habitats during the bird breeding season.

Conservation Measure 1: To the maximum extent practicable, limit construction activities to the time between dawn and dusk to avoid the illumination of adjacent habitat areas.

Conservation Measure 2: If construction activity time restrictions are not possible, use down shielding or directional lighting to avoid light trespass into bird habitat (i.e., use a 'Cobra' style light rather than an omnidirectional light system to direct light down to the roadbed). To the maximum extent practicable, while allowing for public safety, low intensity energy saving lighting (e.g. low pressure sodium lamps) will be used.

Conservation Measure 3: Minimize illumination of lighting on associated construction or operation structures by using motion sensors or heat sensors.

Conservation Measure 5: Bright white light, such as metal halide, halogen, fluorescent, mercury vapor and incandescent lamps should *not* be used.

Stressor: Human Disturbance

Conservation Goal: Minimize prolonged human presence near nesting birds during construction and maintenance actions.

Conservation Measure 1: Restrict unauthorized access to natural areas adjacent to the project site by erecting a barrier and/or avoidance buffers (e.g., gate, fence, wall) to minimize foot traffic and off-road vehicle uses.

Stressor: Collision

Conservation Goal: Minimize collision risk with project infrastructure and vehicles.

Conservation Measure 1: Minimize collision risk with project infrastructure (e.g., temporary and permanent) by increasing visibility through appropriate marking and design features (e.g., lighting, wire marking, etc.).

Conservation Measure 2: On bridge crossing areas with adjacent riparian, beach, estuary, or other bird habitat, use fencing or metal bridge poles (Sebastian Poles) that extend to the height of the tallest vehicles that will use the structure.

Conservation Measure 3: Install wildlife friendly culverts so rodents and small mammals can travel under any new roadways instead of over them. This may help reduce raptor deaths associated with being struck while tracking prey or scavenging road kill on the roadway.

Conservation Measure 4: Remove road-kill carcasses regularly to prevent scavenging and bird congregations along roadways.

Conservation Measure 5: Avoid planting “desirable” fruited or preferred nesting vegetation in medians or Rights of Way.

Conservation Measure 6: Eliminate use of steady burning lights on tall structures (e.g., >200 ft).

Stressor: Entrapment

Conservation Goal: Prevent birds from becoming trapped in project structures or perching and nesting in project areas that may endanger them.

Conservation Measure 1: Minimize entrapment and entanglement hazards through project design measures that may include:

1. Installing anti-perching devices on facilities/equipment where birds may commonly nest or perch
2. Covering or enclosing all potential nesting surfaces on the structure with mesh netting, chicken wire fencing, or other suitable exclusion material prior to the nesting season to prevent birds from establishing new nests. The netting, fencing, or other material must have no opening or mesh size greater than 19 mm and must be maintained until the structure is removed.
3. Cap pipes and cover/seal all small dark spaces where birds may enter and become trapped.

Conservation Measure 2: Use the appropriate deterrents to prevent birds from nesting on structures where they cause conflicts, may endanger themselves, or create a human health and safety hazard.

1. During the time that the birds are trying to build or occupy their nests (generally , between April and August, depending on the geographic location), potential nesting

- surfaces should be monitored at least once every three days for any nesting activity, especially where bird use of structures is likely to cause take. It is permissible to remove non-active nests (without birds or eggs), partially completed nests, or new nests as they are built (prior to occupation). If birds have started to build any nests, the nests shall be removed before they are completed. Water shall not be used to remove the nests if nests are located within 50 feet of any surface waters.
2. If an active nest becomes established (i.e., there are eggs or young in the nest), all work that could result in abandonment or destruction of the nest shall be avoided until the young have fledged or the nest is unoccupied. Construction activities that may displace birds after they have laid their eggs and before the young have fledged should not be permitted. If the project continues into the following spring, this cycle shall be repeated. When work on the structure is complete, all netting shall be removed and properly disposed of.

Stressor: Noise

Conservation Goal: Prevent the increase in noise above ambient levels during the nesting bird breeding season.

Conservation Measure 1: Minimize an increase in noise above ambient levels during project construction by installing temporary structural barriers such as sand bags

Conservation Measure 2: Avoid permanent additions to ambient noise levels from the proposed project by using baffle boxes or sound walls.

Stressor: Chemical Contamination

Conservation Goal: Prevent the introduction of chemicals contaminants into the environment.

Conservation Measure 1: Avoid chemical contamination of the project area by implementing a Hazardous Materials Plan. For more information on hazardous waste and how to properly manage hazardous waste, see the [EPA Hazardous Waste](#) website.

Conservation Measure 2: Avoid soil contamination by using drip pans underneath equipment and containment zones at construction sites and when refueling vehicles or equipment.

Conservation Measure 3: Avoid contaminating natural aquatic and wetland systems with runoff by limiting all equipment maintenance, staging laydown, and dispensing of fuel, oil, etc., to designated upland areas.

Conservation Measure 4: Any use of pesticides or rodenticides shall comply with the applicable [Federal and State laws](#).

1. Choose [non-chemical](#) alternatives when appropriate
2. Pesticides shall be used only in accordance with their registered uses and in accordance with the manufacturer's instructions to limit access to non-target species.

3. For general measures to reducing wildlife exposure to pesticides, see EPA's [Pesticides: Environmental Effects](#) website.

Stressor: Fire

Conservation Goal: Minimize fire potential from project-related activities.

Conservation Measure 1: Reduce fire hazards from vehicles and human activities (e.g., use spark arrestors on power equipment, avoid driving vehicles off road).

Conservation Measure 2: Consider fire potential when developing vegetation management plans by planting temporary impact areas with a palette of low-growing, sparse, fire resistant native species that meet with the approval of the County Fire Department and local FWS Office.

Scientific names of species, subspecies and populations are provided in Appendix 1. Breeding (X) and nonbreeding (nb) status are indicated for each BCR/MBCR; breeding BCRs may also support passage or wintering birds. 34

Appendices 36

Appendix 1. Common and scientific names of species, subspecies, and populations designated as Birds of Conservation Concern 2021, listed as threatened or endangered under the USA Endangered Species Act, considered as extinct in the wild, or included as non-migratory birds on the Watch Lists of the State of the Birds (Rosenberg et al. 2014) or in the Avian Conservation Assessment Database (Partners in Flight 2019). Taxonomic sequence and nomenclature follow the American Ornithologists' Union Check-list of North American Birds, 7th Edition (1983), through the 61th supplement (Chesser et al. 2020). Subspecies and population nomenclature follow Andres et al. (2012) and Clements et al. (2019); nomenclature for Pacific island species follows Clements et al. (2019). 36

Appendix 2. Numbers of Birds of Conservation Concern 2021, non-migratory birds on the Watch Lists in the 2014 State of the Birds (Rosenberg et al. 2014) or Avian Conservation Assessment Database (Partners in Flight 2019), species or populations listed as threatened or endangered under the ESA, and extinct species or populations for the Continental USA, Puerto Rico and the Virgin Islands, and Hawaii and the Pacific Islands. Shared taxa assigned to breeding area list or by greatest abundance. 47

Allen's Hummingbird, Brima Battle/USFWS

Executive Summary

The 1988 amendment to the Fish and Wildlife Conservation Act mandates the U.S. Fish and Wildlife Service (USFWS) to identify species, subspecies and populations (hereafter taxa) of all migratory nongame birds that without additional conservation action are likely to become candidates for listing under the Endangered Species Act (ESA) of 1973. The Birds of Conservation Concern 2021 (BCC 2021) is the most recent effort to carry out this mandate. The overall goal of this report is to identify those bird taxa (beyond those already designated as federally threatened or endangered) that represent the highest conservation priorities of the USFWS. The BCC 2021 is intended to stimulate coordinated, collaborative and proactive conservation actions among international, federal, state, tribal and private partners.

The geographic scope of this endeavor is the United States of America (USA) in its entirety, including island states, commonwealths and territories in the Pacific Ocean and Caribbean Sea and the marine areas delineated as territorial sea, contiguous zone and exclusive economic zone. The BCC 2021 encompasses four distinct geographic scales: 1) the Continental USA, including Alaska; 2) Pacific Ocean islands, including Hawaii; 3) Puerto Rico, the U.S. Virgin Islands and Navassa; and 4) continental Bird Conservation Regions (BCRs) and Marine Bird Conservation Regions (MBCRs), as defined by Bird Studies Canada and NABCI (2014). New to the BCC 2021 is the explicit inclusion of MBCRs.

Bird taxa considered for the BCC 2021 lists include nongame birds, gamebirds without hunting seasons or where harvest is minimal, and subsistence-hunted nongame birds in Alaska. Excluded from consideration for the BCC 2021 are bird species not protected under the Migratory Bird Treaties (Federal Register 2020a), taxa already listed as threatened or endangered under the ESA, or taxa that only occur irregularly or peripherally in the USA. Our conservation assessment was based on several factors, including population abundance and trends, threats on breeding and nonbreeding grounds, and size of breeding and nonbreeding ranges. The factor scores and associated thresholds used for identifying birds of conservation concern in the 2014 State of the Birds Watch List (Rosenberg et al. 2014) and the Avian Conservation Assessment Database (Partners in Flight 2019, Punjabi et al. 2019) served as the foundation on which we developed the BCC 2021 lists. Thus, we sought consistency of the BCC 2021 with priorities

identified through these other efforts, noting that appropriate differences do occur due to the unique scope and mandate of the Birds of Conservation Concern. The BCC 2021 also represents the first time we tried to unify the assessment system among waterbirds, shorebirds and landbirds.

The BCC 2021 identifies 269 individual bird taxa of conservation concern. Of these, 135 taxa are of conservation concern at the Continental scale, 88 taxa at the BCR scale, 29 taxa on Puerto Rico and the Virgin Islands, and 35 taxa on Hawaii and the Pacific Islands; 18 taxa identified on the Continental/BCR lists are shared with either Puerto Rico and the Virgin Islands or Hawaii and the Pacific Islands. The number of taxa on the Hawaii/Pacific Island list appears deceptively low, because a high number of birds there are already listed under the ESA. The number of taxa listed within a BCR, which includes those identified as conservation concern at the Continental or BCR scales, ranges from 12 taxa in the Arctic Plains and Mountains to 49 taxa in Coastal California, with an average of 25.4 taxa per BCR. Among MBCRs, the number of taxa ranged from two taxa in the Chuckchi and Beaufort Seas to 13 taxa in the California Current, with an average of 7.4 taxa per MBCR.

Although the bird taxa included in the BCC 2021 are priorities for conservation action, this list makes no finding with regard to whether they warrant consideration for ESA listing. Our goal is to eliminate the need for additional ESA bird listings by implementing proactive management and conservation actions that sustain populations well above thresholds of endangerment. We recommend that these lists be consulted in accordance with Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds. Many of the taxa identified herein are targets of ongoing conservation attention by national and international initiatives (e.g., Partners in Flight, U.S. Shorebird Conservation Partnership), Migratory Bird Joint Ventures, state and federal natural resource agencies, non-governmental organizations, and other partnerships.

Acknowledgments

This document was the result of collaboration among past and present staff in all regions of the USFWS's Migratory Bird Program. The primary collaborators were Brad Andres, Roxanne Bogart, Bob Ford, Eric Kershner, Terry Rich, and Jennifer Wheeler (Headquarters); Mike Green, Vanessa Loverti, and Roberta Swift (Pacific Region); Carol Beardmore, Bill Howe, Dave Krueper and Bill Vermillion (Southwest Region); Steve Lewis, Bob Russell (deceased) and Tom Will (Midwest Region); Dean Demarest and Troy Wilson (Southeast Region); Randy Dettmers, Debra Reynolds and Caleb Spiegel (Northeast Region); Scott Somershoe (Mountain-Prairie Region); Jim Johnson, Rick Lanctot and Steve Matsuoka (Alaska Region); and Rob Doster and Thomas Leeman (Pacific Southwest Region).

Reddish Egret, Keenan Adams/USFWS

Contributors to the assessments for landbirds and shorebirds beyond the USFWS Migratory Bird Program included Jim Giocomo, Casey Lott, Rebecca Keller, Anne Mini, Mike Parr, David Pashley (deceased), George Wallace, and David Wiedenfeld (American Bird Conservancy); Arvind Panjabi and Allison Shaw (Bird Conservancy of the Rockies); Andrew Couturier (Bird Studies Canada); Ken Rosenberg (Cornell Laboratory of Ornithology); Peter Blancher, Alaine Camfield, Wendy Easton, and Judith Kennedy (Environment and Climate Change Canada); Nancy Douglass (Florida Fish & Wildlife Conservation Commission); John Alexander (Klamath Bird Observatory); Lower Mississippi Valley Joint Venture Science Committee; Lindsay Tudor (Maine Department of Inland Fisheries and Wildlife); Stephen Brown, Rob Clay, and Brad Winn (Manomet); Sara Schweitzer (North Carolina Wildlife Resources Commission); Catherine Hickey (Point Blue Conservation Sciences); Felicia Sanders (South Carolina Department of Natural Resources); David Mehlman (The Nature Conservancy); Greg Butcher (USDA Forest Service); Chuck Hunter (USFWS National Wildlife Refuge System); Janet Ruth and Jessica Stanton (U.S. Geological Survey [USGS]); David Kremetz (USGS Arkansas Cooperative Fish and Wildlife Research Unit); and Henning Stabins (Weyerhaeuser Company). Linda Wires (Consultant Biologist) and numerous other individuals contributed to the waterbird assessment.

This edition of the BCC 2021 is dedicated to the original USFWS “Nongame 7” who retired since the previous publication of the Birds of Conservation Concern: Tara Zimmerman (Pacific Region), Bill Howe (Southwest Region), Steve Lewis (Midwest Region), Stephanie Jones (Mountain-Prairie Region), and Kent Wohl (Alaska Region). They all contributed significantly to past versions of the Birds of Conservation Concern and thereby supported the development of this report.

Introduction

A Congressional amendment to the Fish and Wildlife Conservation Act (16 U.S.C. 2901–2912) in 1988 directed the Secretary of Interior, through the U.S. Fish and Wildlife Service (USFWS), to “identify species, subspecies, and populations of all migratory nongame birds that, without additional conservation actions, are likely to become candidates for listing under the Endangered Species Act (ESA) of 1973, as amended (16 U.S.C. 1531-1543)”. The intent of the legislation was to stimulate coordinated and proactive conservation actions among federal, state and tribal governments, non-governmental organizations (NGOs), and private partners in the United States (USA) before birds require protection under the ESA. Even prior to the passage of this amendment, the USFWS was providing periodic assessments of migratory birds that might become candidates for listing under the ESA, generating the first list of migratory nongame birds of management concern in 1982 (U.S. Fish and Wildlife Service 1982). Since that time, five additional lists have been published (U.S. Department of the Interior 1990; U.S. Fish and Wildlife Service 1987, 1995, 2002, 2008).

The Birds of Conservation Concern 2021 (BCC 2021) presented here is the most recent effort by the USFWS to carry out the Fish and Wildlife Conservation Act’s proactive conservation mandate and updates the Birds of Conservation Concern (BCC) 2008 (U.S. Fish and Wildlife Service 2008). Development of the BCC 2021 aligns with the USFWS mission of “working with others to conserve, protect, and enhance fish, wildlife, plants and their habitats for the continuing benefit of the American people” and meets the current USFWS objective to “guide the conservation, development, and management of the Nation’s fish and wildlife resources”. The overall goal of the BCC 2021 is to identify, by geography, those nongame migratory birds (beyond those already federally listed as threatened or endangered) in greatest need of conservation attention.

The philosophy underlying the BCC reports is that proactive bird conservation is critical at a time when continued human impacts will be intensified by effects of a changing climate. By investing in actions for designated BCC taxa, we can prevent further degradation to environments that we all share, improve the odds for successful long-term conservation, and avoid the complexities associated with federal ESA listing. Proactive conservation is recognized as being more cost-effective than the

recovery efforts required once a bird is listed under the ESA (e.g., Drechsler et al. 2011).

Because it is mandated by law and produced by the USFWS, federal agencies, international NGOs and foreign governments view the BCC list as the official USA Government position on migratory nongame birds of conservation concern. The BCC list is also used to identify priority wetland birds for evaluating North American Wetlands Conservation Act proposals, used in scoring of Neotropical Migratory Bird Conservation Act proposals, and referenced in Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds. To promote more consistency among organizations developing various lists of birds of conservation concern, the BCC 2021 closely followed the methods used to generate the Watch List for the 2014 State of the Birds (Rosenberg et al. 2014), 2016 Partners in Flight Landbird Conservation Plan (Rosenberg et al. 2016) and Avian Conservation Assessment Database (Partners in Flight 2019). However, the BCC 2021 differs somewhat from these lists because of its unique scope and mandate.

Methods

Geographic Scope

The geographic scope of the BCC 2021 consists of the entirety of the lands and waters of the USA, including states, commonwealths, territories and other affiliations in the Caribbean Sea and Pacific Ocean. Also included in the geographic scope are marine boundaries defined as the territorial sea, contiguous zone and exclusive economic zone (see <https://www.nauticalcharts.noaa.gov/csdl/mbound.htm>). To facilitate use and interpretation of the BCC 2021, we organized the presentation into four geopolitical and ecoregional groupings: 1) Continental USA, including Alaska; 2) Puerto Rico and the U.S. Virgin Islands, 3) Hawaii and the Pacific Islands, and 4) continental Bird Conservation Regions (BCRs) and Marine Bird Conservation Regions (MBCRs). Offshore jurisdictional waters associated with Hawaii and the Pacific Islands and Puerto Rico and the U.S. Virgin Islands are included in their respective regions. We decided to treat states, commonwealths, territories and other affiliations in the Caribbean Sea and Pacific Ocean separately because of the high endemism and high vulnerability of island avifauna (Kier et al. 2009). Descriptions of states, commonwealths, territories and other affiliations in the Caribbean Sea and Pacific Ocean are provided in Table 1, and BCRs and MBCRs are described in Table 2 and illustrated in Figure 1. For details on BCRs and MBCRs, please see Bird Studies Canada and NABCI (2014).

Birds Considered

The taxonomic scope for the BCC 2021 is bounded by the Migratory Bird Treaties that the USA has with Canada (1916), Mexico (1936), Japan (1972) and Russia (1976). The USFWS periodically updates the list of migratory birds covered by these treaties, which usually results from changes in taxonomy, status or distribution. The most recent published list of migratory birds (Federal Register 2020b) was used as the basis for developing the BCC 2021. Within this list, birds considered for inclusion in the BCC 2021 either do not have sport-hunting seasons in the USA or have sporting-hunting seasons where little harvest occurs (e.g., rails). Birds that are not sport-hunted in the lower 48 states but are hunted for subsistence in Alaska are also considered. Because the intent of BCC is to highlight potential candidate birds where ESA listing could be averted through proactive conservation attention, the BCC 2021 further excludes any species, subspecies or population of bird already listed as threatened or endangered under ESA. We also eliminated from consideration any bird that currently occurs as an accidental species in the USA per the AOU

Checklist (1983) and subsequent updates, or that was introduced into the USA by humans (Federal Register 2005). Although there is a conservation benefit to protecting accidental species that may potentially expand their regular range into the U.S. in the future, additional conservation actions are not currently necessary and would have little effect on the present status of those species. We use the term “taxon” or “taxa” to refer to species, subspecies and delineated populations of birds considered for the BCC 2021.

To present a more comprehensive perspective on the conservation status of birds within the jurisdictions of the USA, we provide additional information in Appendix 1 on taxa that do not fall within the scope of the BCC 2021 but were identified on the Watch Lists of the State of the Birds (Rosenberg et al. 2014) or in the Avian Conservation Assessment Database (Partners in Flight 2019); were listed as endangered or threatened under the ESA as of January 15, 2021; or are believed to be extinct. To our knowledge, a comprehensive presentation of all birds with an elevated conservation status within the USA was heretofore unavailable.

In general, common and scientific names of birds are presented at the species level, except where it is necessary to differentiate among taxa of a species that may occur in the USA but differ in their conservation status among geographic scales or populations (e.g., taxa listed under the ESA). Relevant taxa of island populations are also identified. Geographic and other modifiers are used throughout the tables to aid in identifying such differentiation, particularly at the BCR and MBCR scales. Species-level classification generally follows the American Ornithologists’ Union’s Checklist of North American Birds, 7th Edition (1983), including changes and supplements through the 61st supplement in 2020 (Chesser et al. 2020). Subspecies and population classification and species classification in the Pacific Islands generally follows Clements et al. (2019), with some exceptions for shorebirds (see Andres et al. 2012).

Assessing Conservation Status

The BCC 2021 represents the first application of a unified approach to evaluate the conservation status of landbirds, shorebirds and waterbirds for the BCC — an approach greatly facilitated through the efforts to promote consistency during the development of the State of the Birds Watch List in 2014 (Rosenberg et al. 2014). Although the overall approach to evaluate conservation status across all

bird groups for the BCC 2021 is now more consistent than previous BCC assessments, data availability and quality still vary widely among taxonomic groups.

Scoring factors and criteria developed by Partners in Flight (Rosenberg et al. 2016, Panjabi et al. 2019) were the primary means for evaluating conservation status of landbirds, shorebirds, and waterbirds. For areas or taxa where it was not possible to directly apply this evaluation approach, we consulted State Wildlife Action Plans for American Samoa (Department of Marine and Wildlife Resources 2006, 2015), Guam (Guam Division of Aquatic and Wildlife Resources 2006), Hawaii (Hawai'i Department of Land and Natural Resources 2015), the Northern Mariana Islands (Liske-Clark 2015), Puerto Rico (Puerto Rico Department of Natural and Environmental Resources 2015), and the U.S. Virgin Islands (Platenberg and Valiulis 2018). We also consulted the IUCN Red List of Threatened Species (2019), particularly for seabirds.

The intent of the assessment for landbirds, shorebirds and waterbirds is to emphasize their

conservation status relative to the entire USA. The conservation status of many landbirds reflects their global status, in the case of entire species that breed in, migrate through or winter in the USA. In contrast, most waterbirds and shorebirds tend to have cosmopolitan distributions, and their conservation at the species level includes populations occurring outside of the USA; therefore, we evaluated several species of shorebirds and waterbirds at the North American population scale. At the BCR and MBCR scales, we evaluated the conservation status of taxa relative to each region, to the degree available data and current understanding allowed.

Scores ranging from one to five were assigned to each of six assessment factors, which are presented below along with scoring criteria (see Panjabi et al. 2019 for details). Data on these six factors were recently updated for shorebirds (U.S. Shorebird Conservation Partnership 2016), landbirds (Partners in Flight 2019) and waterbirds (BirdLife International 2015; Wetlands International 2015; Partners in Flight 2019; L. Wires, unpublished data).

Black-footed Albatross pair, Dan Clark/USFWS

Population Size (PS).

The current estimated number of individuals of a taxon. The factor generally refers to the number of breeding adults but varies somewhat among taxonomic groups due to differing biology and estimation methods.

Score	Criterion
1	≥50,000,000 individuals
2	≥5,000,000 and <50,000,000 individuals
3	≥500,000 and <5,000,000 individuals
4	≥50,000 and <500,000 individuals
5	<50,000 individuals

Breeding Distribution (BD) and Nonbreeding Distribution (ND).

This factor is generally derived from maps developed by NatureServe (2015) and Birdlife International (2015). All range sizes are derived from two-dimensional polygons. For island-breeding seabirds, the breeding distribution generally refers to the size of their nesting islands and does not include pelagic foraging areas, which are hard to delineate for many taxa.

Score	Criterion
1	≥4,000,000 km ²
2	≥1,000,000 and <4,000,000 km ²
3	≥300,000 and <1,000,000 km ²
4	≥80,000 and <300,000 km ²
5	<80,000 km ²

Breeding Threats (TB) and Nonbreeding Threats (TN).

Threats were evaluated based on the cumulative level of significance to the future viability of a taxon within the geographic region of interest. For taxa that are widely dispersed during migration (e.g., landbirds), TN primarily reflects threats during the boreal winter; for groups that aggregate during migration (e.g., shorebirds), TN reflects migration and wintering threats.

Score	Criterion
1	Future conditions are expected to significantly improve for the majority of the taxon.
2	Future conditions are expected to remain stable; no significant threats.
3	Slight to moderate decline in the future suitability of conditions is expected for the majority of the taxon.
4	Severe deterioration in the future suitability of conditions is expected for the majority of the taxon.
5	Extreme deterioration in the future suitability of conditions is expected.

Population Trend (PT).

Forty-year trends from the Breeding Bird Survey (Criterion 1; see <https://www.mbr-pwrc.usgs.gov/>) provided information on the majority of landbirds. For waterbirds and shorebirds, information was used from a variety of sources and was less comprehensive and quantitative (Criterion 2).

Score	Criterion 1	Criterion 2
1	change ≥ 50%; P ≤ 0.1	significant large increase
2	change 0 to 50%; P ≤ 0.1 change > 0%; P ≤ 0.33 change > -15%; P ≤ 0.33; reliable	significant small increase possible increase stable
3	P > 0.33; unreliable or change ≤ -15%; P > 0.33; reliable change -15% to 0%; 0.1 < P < 0.33 change -15% to 0%; P ≤ 0.1	uncertain population change possible small decrease significant small decrease
4	change -15% to -50%; 0.1 < P < 0.33 change -15% to -50%; P ≤ 0.1 change ≤ -50%; 0.1 < P < 0.33	moderate decrease possible large decrease
5	change ≤ -50%; P ≤ 0.1	significant large decrease

Relative Density (RD).

Relative Density is an additional factor assessed at the BCR/MBCR scale but not at the continental scale. RD scores reflect the mean density of a taxa within a BCR/MBCR relative to density in the single BCR/MBCR in which the taxa occurs in its highest density (Panjabi et al. 2019). Nonbreeding season scores and those for MBCRs were often generated using expert opinion).

Score	Quantitative Criterion		Qualitative Criterion
	Relative abundance	Relative frequency	
0		BCR relative frequency < 1.5% of the maximum relative frequency	has occurred only irregularly, or strong evidence of regular occurrence is lacking
1	BCR relative abundance < 1% of the maximum relative abundance	BCR relative frequency 1.5-3.6% of maximum relative frequency	occurs regularly but in very small numbers or in only a very small part of the region in question
2	BCR relative abundance 1-10% of maximum relative abundance	BCR relative frequency 3.6-21.7% of maximum relative frequency	occurs in low mean abundance relative to the region(s) in which the taxa occurs in maximum density
3	BCR relative abundance 10-25% of maximum relative abundance	BCR relative frequency 21.7-44.6% of maximum relative frequency	occurs in moderate mean abundance relative to the region(s) in which the taxa occurs in maximum density
4	BCR relative abundance 25-50% of maximum relative abundance	BCR relative frequency 44.6-68.1% of maximum relative frequency	occurs in moderately high mean abundance relative to the region(s) in which the taxa occurs in maximum density
5	BCR relative abundance > 50% of maximum relative abundance	BCR relative frequency > 68.1% of maximum relative frequency	occurs in high mean abundance, similar to the region(s) in which the taxa occurs in maximum density

Identifying Birds of Conservation Concern

The following Combined Continental Scores (CCS) of factors and scoring thresholds, based primarily on Panjabi et al. (2019), were used to identify taxa of elevated conservation concern:

$$\text{CCS}(\text{max}) \geq 14 \text{ or} \\ \text{CCS}(\text{max}) = 13 \text{ and } \text{PT} = 5, \text{ where}$$

CCS(max) is the maximum score of either CCS(B) or CCS(N),
CCS(B) is Combined Continental Score (Breeding) = PS + BD + TB + PT, and
CCS(N) is Combined Continental Score (Nonbreeding) = PS + ND + TN + PT.

The above criteria are consistent with a breeding season Watch List designation at a North American continental scale (USA and Canada) in the recently published version of the Avian Conservation Assessment Database (Panjabi et al. 2019).

To be included as a Bird of Conservation Concern at the BCR or MBCR scale, a taxon had to meet the Watch List criteria above and had to occur regularly within the region at a manageable level ($\text{RD} \geq 2$). Taxa breeding in a BCR were generally assessed using the quantitative criteria, whereas nonbreeding taxa were most often assessed using the qualitative criteria.

At the BCR scale, we identified additional taxa that did not meet the criteria for the BCC 2021 Continental list (Watch List) but were nonetheless

of elevated conservation concern regionally. Taxa included as birds of conservation concern at the BCR scale had $\text{RD} \geq 2$ and met the following scoring thresholds, based on the Partners in Flight action codes (Panjabi et al. 2019) at the regional scale:

- 1) TB or TN = 5 (Critical Recovery); or
- 2) TB or TN = 4 and PT = 5 (Immediate Management); or
- 3) Combined Regional Breeding Score (CRBS) ≥ 17 , and
 - a) TB or TN = 3 and PT ≥ 4 or (Management Attention)
 - b) TB or TN = 4 and PT < 5 (Management Attention).

The CRBS is equivalent to the CCS(B) + RD. Inclusion of nonbreeding taxa at the BCR level was generally based on expert opinion, because BCR-scale nonbreeding scores are not yet incorporated into the Avian Conservation Assessment Database (Panjabi et al. 2019).

These regional criteria for the BCC 2021 were more stringent than the criteria used in the Avian Conservation Assessment Database to identify species of regional concern (Panjabi et al. 2019) but better address the overall mandate of the BCC. A few taxa below the species level were elevated to the Continental list due to continued concern expressed by partners or were subspecies unique to North America (e.g., Swallow-tailed Kite, Gray-headed Chickadee).

Results and Discussion

The BCC 2021 identifies 269 individual bird taxa of conservation concern (Appendix 1). Of these, 135 taxa are of conservation concern at the Continental scale, 88 taxa at the BCR scale, 29 taxa on Puerto Rico and the Virgin Islands and 35 taxa on Hawaii and the Pacific Islands; 18 taxa identified on the Continental/BCR lists are shared with either Puerto Rico and the Virgin Islands or Hawaii and the Pacific Islands (Table 3). The number of taxa on the Hawaii/Pacific Island list appears deceptively low, because a relatively high number of birds there are already listed under the ESA or are extinct (Appendix 2). A few of the taxa identified in the BCC 2021 are currently being considered for listing or de-listing under the ESA.

All major bird groups are represented in the BCC 2021, but shorebirds, seabirds and some landbirds have particularly high representation (Table 4). Of eligible taxa, 53% of shorebirds and 48% of seabirds met criteria for inclusion in the BCC 2021. Based on habitat designations of landbirds provided in Rosenberg et al. (2019), which apply to the Continental and BCR scales (Table 4), a high percentage of taxa inhabiting grasslands (54%)

and aridlands (47%) were included in the BCC 2021, as were aerial insectivores (31%). Excluding aridland birds, the other groups experienced the greatest losses of individuals over the last fifty years (Rosenberg et al. 2019).

The BCR/MBCR lists incorporate the 135 taxa of Continental concern where they are considered to occur at manageable levels and include an additional 88 taxa of regional concern within specific BCRs or MBCRs. The number of taxa listed within a BCR ranges from 12 taxa in the Arctic Plains and Mountains to 49 taxa in Coastal California, with an average of 25.4 taxa per BCR (see Tables 5-10). Among MBCRs, the number of taxa ranged from two taxa in the Chuckchi and Beaufort Seas to 13 taxa in the California Current, with an average of 7.4 taxa per MBCR (see Tables 5, 6, 8 and 10).

The BCC 2021 is the latest update in a continuing effort to assess and prioritize migratory birds for conservation purposes (U.S. Department of the Interior 1990; U.S. Fish and Wildlife Service 1982, 1987, 1995, 2002, 2008). Overall, it is difficult to make meaningful comparisons among the lists over the years because of differences in the way each list was constructed. However, the 2021 and 2008 lists were most similar in the assessment approach, with the exception of inclusion of some taxa in 2008 not considered in 2021. Accounting for this difference, the number of taxa was essentially the same on the Continental list between years (133 versus 132 in 2008), had a small increase (8%) on Puerto Rico/Virgin Islands list (28 versus 26 in 2008), and a significant increase (52%) on the Hawaii/Pacific Islands list (35 versus 23 in 2008). Between years, nine taxa identified in the 2008 BCC were listed under the ESA in 2021, and three species de-listed during the period were included in BCC 2021. The increase in Hawaii and the Pacific Islands is attributed to a more thorough treatment of Pacific Islands beyond Hawaii and inclusion of more seabird taxa; additional nonbreeding seabird taxa occurring in continental USA waters were included on the Continental list. Similar numbers of taxa were identified at the BCR level in 2008 and 2021 (84 taxa versus 83). Notwithstanding these differences, a number of taxa identified in 2008 are not included in the BCC 2021, which reflects a real change in our understanding of current conservation status. We do not present USFWS Region lists in 2021 as we did in 2008 and recognize the current acceptance of BCRs and MBCRs as fundamental conservation planning and implementation units.

Wilson's Plover. Russ/CC BY 2.0

The State of the Birds produced in 2014 (North American Bird Conservation Initiative, U.S. Committee 2014) provides more details on how land-use change and other environmental threats affect birds in the major ecosystems in the USA, and a more recent analysis provides an overview of declines and losses of birds in North America (Rosenberg et al. 2019). As with the results presented in the BCC 2021, island birds, grassland birds, seabirds and shorebirds demonstrate the greatest conservation need. Although we did not build specific climate change scoring into the current assessment, the 2010 State of the Birds provided an overview of climate change effects on USA birds (North American Bird Conservation Initiative, U.S. Committee 2010). Future updates to the Birds of Conservation Concern might consider including measures of the potential effects of climate change.

Although all of the bird taxa included in the BCC 2021 are priorities for conservation action, this list makes no finding with regard to whether they warrant consideration for ESA listing. Our goal is to avert the need for additional ESA bird listings by implementing and coordinating implementation of proactive management and conservation actions. We recommend that these lists be consulted in accordance with Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds. The BCC 2021 is intended to stimulate coordinated and collaborative proactive conservation actions among federal, state, tribal and private partners. Many of the taxa identified herein are targets of ongoing conservation attention by national and international initiatives (e.g., Partners in Flight, U.S. Shorebird Conservation Partnership), Migratory Bird Joint Ventures, state and federal natural resource agencies, NGOs, and other partnerships.

Figures

Figure 1.

Map of terrestrial Bird Conservation Regions (BCRs) Marine Bird Conservation Regions (MBCRs) of North America (Bird Studies Canada and NABCI 2014). See Table 2 for BCR and MBCR names.

Tables

Table 1.

Island states, commonwealths, territories and other affiliations of the United States (USA), including the USA territorial sea, contiguous zone and exclusive economic zone considered in the development of the Birds of Conservation Concern 2021.

Hawaii and Pacific Islands

State of Hawaii

American Samoa (unincorporated and unorganized territory)

Commonwealth of the Northern Marianas Islands (aligned through a covenant of “political union”)

Guam (unincorporated organized territory)

Unincorporated territories administered by the U.S. Fish and Wildlife Service (USFWS) as National Wildlife Refuges (NWR) unless noted.

Howland Island

Jarvis Island

Johnston Atoll (joint control with the Department of Defense)

Kingman Reef

Midway Atoll

Palmyra Atoll (partially privately owned)

Wake Island (administered by the Department of the Interior)

Puerto Rico and U.S. Virgin Islands

Commonwealth of Puerto Rico (commonwealth)

U.S. Virgin Islands (unincorporated organized territory)

Navassa Island (administered by the USFWS as a NWR)

King Rail, Alan Schmierer/CCO 1.0

Table 2.

Terrestrial Bird Conservation Regions (BCR) and Marine Bird Conservation Regions (MBCR) either wholly or partially within the jurisdiction of the Continental USA, including Alaska, used in the Birds of Conservation Concern 2021.

BCR/ MBCR	BCR/MBCR Name
1	Aleutian/Bering Sea Islands
2	Western Alaska
3	Arctic Plains and Mountains
4	Northwestern Interior Forest
5	Northern Pacific Rainforest
9	Great Basin
10	Northern Rockies
11	Prairie Potholes
12	Boreal Hardwood Transition
13	Lower Great Lakes/St. Lawrence Plain
14	Atlantic Northern Forest
15	Sierra Nevada
16	Southern Rockies/Colorado Plateau
17	Badlands and Prairies
18	Shortgrass Prairie
19	Central Mixed-grass Prairie
20	Edwards Plateau
21	Oaks and Prairies
22	Eastern Tallgrass Prairie
23	Prairie Hardwood Transition
24	Central Hardwoods
25	West Gulf Coastal Plain/Ouachitas
26	Mississippi Alluvial Valley
27	Southeastern Coastal Plain
28	Appalachian Mountains
29	Piedmont
30	New England/Mid-Atlantic Coast
31	Peninsular Florida
32	Coastal California
33	Sonoran and Mohave Deserts
34	Sierra Madre Occidental
35	Chihuahuan Desert
36	Tamaulipan Brushlands
37	Gulf Coastal Prairie
M13	Chukchi and Beaufort Seas
M14	East Bering Sea
M15	Gulf of Alaska
M17	California Current
M18	Northeast U.S. Continental Shelf and U.S. waters (M16) beyond the shelf
M19	Southeast U.S. Continental Shelf and U.S. waters (M16) beyond the shelf
M20	Gulf of Mexico

Table 3.

Birds of Conservation Concern 2021 in the Continental USA (CON), continental Bird Conservation Regions (BCR), Puerto Rico and Virgin Islands (PRVI), and Hawaii and Pacific Islands (HAPI). Refer to Appendix 1 for scientific names of species, subspecies and populations. Breeding (X) and nonbreeding (nb) status are indicated for each geography. Parenthesized names indicate conservation concern only exists for a specific subspecies or population.

Common Name	CON	BCR	PRVI	HAPI
West Indian Whistling-Duck			X	
Pacific Black Duck (Palau)				X
White-cheeked Pintail (West Indies)			X

Table 4.

Numbers of taxa of Birds of Conservation Concern 2021 represented on the Continental USA (CON), continental Bird Conservation Region (BCR), Puerto Rico and Virgin Islands (PRVI), Hawaii and Pacific Islands (HAPI) lists by general taxonomic groups and by habitats within landbirds. Also presented are the unique taxa represented on all lists.

	CON	BCR	PRVI	HAPI	Unique Taxa
Landbirds ¹	71	69	8	14	159
aerial insectivores ²	5	4	1		
grasslands	7	9			
forests	38	33	5	12	
aridlands	13	13			
wetlands	3	8			
other habitats	5	2	2	2	
Shorebirds ³	19	10	6	2	30
Seabirds ⁴	36	7	7	16	58
Waterbirds ⁵	8	3	8	3	22
All Taxa	134	88	29	35	269

¹Doves and pigeons; cuckoos; nightjars and allies; swifts; hummingbirds; eagles and hawks; owls; trogons; kingfishers; woodpeckers; falcons; songbirds (perching birds).

²Nightjars and allies; swifts; some flycatchers.

³Avocets; oystercatchers; plovers; and sandpipers and allies.

⁴Auks, murres and puffins; gulls, terns and skimmers; tropicbirds; albatrosses; shearwaters and petrels; storm-petrels; frigatebirds; and boobies.

⁵Ducks; grebes; rails, gallinules and coots; limpkins; cranes; loons; storks; cormorants; pelicans; and herons and egrets.

Flammulated Owl, Alan Schmierer/CC0 1.0

Table 5.

Birds of Conservation Concern 2021 designated within BCRs 1, 2, 3, 4 and MBCRs 13, 14, 15. See Table 2 for descriptions of BCRs and MBCRs, Scientific names of species, subspecies and populations are provided in Appendix 1. Breeding (X) and nonbreeding (nb) status are indicated for each BCR or MBCR; breeding BCRs may also support passage or wintering birds.

Taxon Common Name	BCR/MBCR

Appendices

Appendix 1.

Common and scientific names of species, subspecies, and populations designated as Birds of Conservation Concern 2021, listed as threatened or endangered under the USA Endangered Species Act, considered as extinct in the wild, or included as non-migratory birds on the Watch Lists of the State of the Birds (Rosenberg et al. 2014) or in the Avian Conservation Assessment Database (Partners in Flight 2019). Taxonomic sequence and nomenclature follow the American Ornithologists' Union Check-list of North American Birds, 7th Edition (1998), through the 60th supplement (2019). Subspecies and population nomenclature follow Andres et al. (2012) and Clements et al. (2019); nomenclature for Pacific island species follows Clements et al. (2019).

¹BCC = Birds of Conservation Concern 2021: CO (C) = Continental USA, R = continental Bird Conservation Region list (BCR); PV (P) = Puerto Rico and Virgin Islands; HP (H) = Hawaii and Pacific Islands.

²ESA/WL (List) = listed under the USA Endangered Species Act as endangered (E) or threatened (T); considered extinct in the wild (X); or on the Partners in Flight Watch List in 2014 or the Avian Conservation Assessment Database in 2019 and not defined as a Migratory Bird (W). Area = main occurrence region of ESA or Watch List taxa as described above (C, P, H).

Appendix 2.

Numbers of Birds of Conservation Concern 2021, non-migratory birds on the Watch Lists in the 2014 State of the Birds (Rosenberg et al. 2014) or Avian Conservation Assessment Database (Partners in Flight 2019), species or populations listed as threatened or endangered under the ESA, and extinct species or populations for the Continental USA, Puerto Rico and the Virgin Islands, and Hawaii and the Pacific Islands. Shared taxa assigned to breeding area list or by greatest abundance.

Region	BCC 2021	Watch List 2014/2019	ESA	Extinct
Continental USA ¹	129 (88) ¹	11	43	8
Puerto Rico/Virgin Islands	21	0	8	2
Hawaii/Pacific Islands	31	13	37	37

2015011604 EASE \$36.00
08/18/2015 12:26:50P 12 PGS
Eric Schmitz
Monroe County Recorder IN
Recorded as Presented

CONSERVANCY AND KARST EASEMENTS

THIS INDENTURE WITNESSETH, that Bill C. Brown Revocable Trust, hereinafter called GRANTOR, of Monroe County, State of Indiana grants to The City of Bloomington, the Grantee, for and in consideration of One Dollar (\$1.00) and other valuable consideration, the receipt of which is hereby acknowledged, Conservancy Easements and Karst Easements as defined below and as described on the attached exhibit "A"

Conservancy Easement – This easement is to protect natural areas and includes wooded areas, sloped areas, drainage ways and karst features. The following restrictions apply within the easement area;

- Any land disturbing activity including the placement of a fence, or alteration of any vegetative cover, including mowing, is prohibited in the easement area.
- Removal of dead or diseased trees that pose a safety risk or impede drainage as well as allowing the removal of exotic species is allowed only after first obtaining written approval from the City of Bloomington Planning & Transportation Department.
- In cases where removal of exotic invasive species is proposed, the restoration of disturbed areas with native plant material is allowed with written approval from the City of Bloomington Planning & Transportation Department prior to any proposed removal and restoration.
- Karst areas within this Conservancy Easement are also subject to any additional restrictions provided by the Karst Conservancy Easement.

Karst Easement – This easement is to protect the Karst features. The following restrictions apply within the easement area;

- No land disturbing activity, including the placement of a fence or the placement of any fill material is allowed within the easement area.
- No structures shall be located within 10 of the easement.
- Storm water discharge into the easement area shall not be substantially changed. The easement are shall not be used for storm water detention.
- Spring or cave entrances shall not be modified except for the placement of a gate to prevent human access.
- Mowing is allowed in the easement area. Removal of dead or diseased trees that pose a safety risk or impede draining as well as removal of exotic invasive species is allowed only after first obtaining written approval from the City of Bloomington Planning & Transportation Department.
- Right is granted to the City of Bloomington to enter the property to inspect the easement and alter or repair the karst feature.
- Any use of pesticides, herbicides, or fertilizers is prohibited within the easement area.

- Where removal of exotic invasive species is proposed, the restoration of the disturbed area with native plant material is allowed. Written approval of the City of Bloomington Planning & Transportation Department is required prior to any proposed removal and restoration.

IN WITNESS WHEREOF, the said Grantor has executed this instrument this _____ day of August, 2015.

Bill C. Brown Revocable Trust

By: _____

ATTACHMENT 7

CHAPTER 829

ZONING ORDINANCE: KARST AND SINKHOLE DEVELOPMENT STANDARDS

829-1. Purpose and Intent

The purpose of this chapter is to establish review procedures, use limitations, design standards and performance standards applicable to site developments that encompass or affect sinkholes or other karst features. The intent of this chapter is to protect the public health, safety and welfare by requiring the development and use of environmentally constrained areas to proceed in a manner that promotes safe and appropriate storm water management and ground water quality.

829-2. Policy

Unless expressly stated otherwise or contrary to context, the provisions of this chapter shall be interpreted and applied in accordance with the following policies:

- (A) Development in areas that encompass or affect sinkholes or other karst features (i.e., in “sinkhole areas”) is prohibited unless expressly permitted by this chapter or until it is demonstrated that the development would have no significant detrimental impact on storm water management or ground water quality.
- (B) Potential impacts on storm water management and ground water quality must be identified, assessed and addressed through written studies at the earliest stages of the development approval process (e.g., during the preliminary plat, development plan or site plan approval stages).
- (C) The extent and sophistication of any required study should directly reflect the nature and complexity of the proposed development and of the development site (e.g., the more complex the karst features, the more extensive and sophisticated the study).
- (D) All applicable Federal, State and Local permits shall be obtained prior to construction.

829-3. Development Requirements

- (A) This chapter shall apply to all public, private and institutional land disturbing activities, with the following exception:
 - (1) Logging, mineral extraction, and agricultural uses.
 - (a) Accessory structures and roadways used for mineral extraction uses shall comply with the Ordinance if there is an anticipated impact on any adjacent property;

- (b) Accessory structures and roadways used for logging and agricultural uses shall comply with the Ordinance; and,
 - (c) The above notwithstanding, the filling or plugging of a sinkhole with any material (e.g. earthen, manmade, animal or vegetable) in a way that adversely affects stormwater management or groundwater quality is prohibited.
- (B) Any report, study, plan, calculation or proposal required by this chapter shall be provided by the petitioner at the petitioner's cost.
- (C) Sinkhole conservancy areas (SCA) shall be established to the following minimum standards in all sinkhole areas subject to the sinkhole evaluation requirement of Section 829-4:
 - (1) For sinkholes less than or equal to one quarter (0.25) acre in area, the SCA shall, at a minimum, encompass the entire sinkhole and all of the area within twenty-five (25) feet of the sinkhole rim.
 - (2) For all sinkholes greater than one quarter (0.25) acre in size, the SCA shall, at a minimum, encompass all of the area within fifty (50) feet of the post-development sinkhole flooding area as determined in 829-6 or all of the area within twenty-five (25) feet of the sinkhole rim, whichever is less.
 - (3) For compound sinkholes, the SCA shall be established in accordance with parts (1) and (2) above for each component sinkhole and for the compound sinkhole. For example, if the compound sinkhole is greater than one quarter (0.25) acre in area, the SCA shall comply with part (2). The SCA for sinkholes that are less than one quarter (0.25) acre in area and that are within the compound sinkhole must comply with part (1). It is possible that areas within the rim of a compound sinkhole will not be subject to a SCA.

If a SCA is required to be established on a parcel that was not, or will not be created by recorded plat, a legal description of the SCA shall be included on the recorded deed of the parcel.

- (D) Setbacks and Use Restrictions. The following setbacks and use restrictions are established.
 - (1) No new construction of any of the following shall be permitted within the SCA:
 - (a) Commercial or industrial structures;
 - (b) Private drives, streets, and highways unless the County Highway Engineer and Drainage Engineer conclude that traffic safety

considerations outweigh stormwater and water quality considerations;

- (c) Storage yards or parking lots for materials, vehicles and equipment;
 - (d) Residential structures and accessory structures;
 - (e) Public, semi-public and office facilities;
 - (f) Swimming pools and other amusement and recreational services unless expressly permitted; and/or
 - (g) Stormwater detention features that have not been approved by the drainage board.
- (2) Construction of the following shall not be permitted within twenty-five (25) feet of the sinkhole rim regardless of size of sinkhole:
- (a) structures for storage of hazardous material(s); and/or
 - (b) any structure associated with a use allowed in Light Industrial (LI) or Heavy Industrial (HI) zones.
- (3) Residential, commercial, and industrial structures and public, semi-public and office facilities shall not be constructed within the sinkhole rim unless the lowest floor elevation is a minimum of five (5) feet above the sinkhole flooding elevation, or one (1) foot above the lowest elevation on the sinkhole rim, whichever is less, and provided that a statement of a registered professional engineer or geologist is submitted to the Administrator (see definitions Chapter 801) indicating that foundation conditions are suitable for such structures.
- (4) Individual Wastewater Systems
- (a) Septic tanks shall not be located within the SCA.
 - (b) Septic Disposal Fields or wastewater stabilization ponds (lagoons) shall not be located within twenty-five (25) feet of the SCA.
- (5) Pesticides and fertilizers may be used in sinkhole areas only in accordance with the rules and regulations of the State of Indiana Pesticide Review Board and with industry standards.
- (6) Operation of heavy construction equipment is prohibited in the SCA unless:

- (a) it is demonstrated to the Administrator that the operation of such equipment is necessary to prevent clear and imminent danger to persons and property;
 - (b) the operation of such equipment is necessary to implement a drainage and/or erosion control plan approved by the Drainage Board; and/or
 - (c) if the operation of such equipment is required for the removal of material from a previously filled sinkhole.
- (7) Underground utility lines, equipment and facilities shall be installed in a manner that does not disturb a sinkhole eye or disrupt the natural pattern of storm runoff into the sinkhole. Sanitary sewer lines installed within a SCA shall be water grade pipe.
 - (8) Recreational facilities such as unpaved hiking, jogging, and bicycling trails, playgrounds, and exercise courses, are permitted within the SCA.
 - (9) Golf courses and grass playing fields are permitted within the SCA subject to approval of a Management Plan for use of pesticides and fertilizers by the Administrator.
 - (10) Clearing and pruning of trees as well as understory, and limited grubbing of roots is permitted within the SCA provided that equivalent or improved protective living vegetative ground cover is maintained.
 - (11) Landscaping and minor gardening is permitted in the SCA provided erosion and sediment discharge is limited through use of minimum tillage and mulches. Normal yard and landscaping maintenance is permitted.
 - (12) Construction of light incidental landscaping and recreational structures (such as gazebos, playground equipment, etc.), is permitted in the SCA but not within the sinkhole eye. Such structures may not be placed within a SCA on excavated foundations or concrete pads but may be placed on small concrete post-hole foundations.

The above notwithstanding, no land disturbing activity may occur within a SCA if that development, construction or use is determined by the Administrator to violate the intent of this chapter.

- (E) Newly formed or pre-existing sinkholes that become active in a way that causes an immediate threat to nearby structures, roadways, persons, and/or property may be stabilized and filled provided existing drainage patterns are not changed. This subsection authorizes conditional, emergency action to remediate a hazardous condition. However, within thirty (30) days of the action, the person responsible for taking the action shall submit a report to the Administrator detailing the actions used to stabilize and/or fill the sinkhole. The report shall be reviewed by

the County Drainage Engineer and County Surveyor to determine whether existing drainage patterns were changed by the action. If the Engineer and Surveyor find that existing drainage patterns were changed, the person responsible for the action shall promptly take all measures necessary to restore the drainage patterns and to otherwise comply with this Chapter.

(F) Stormwater Detention in Sinkholes. The Administrator, upon the Drainage Board's recommendation, may waive detention requirements to allow increased runoff into sinkholes and may authorize excavation within a sinkhole flooding area in order to provide additional water detention storage, upon finding that:

- (1) the flooding concerns expressed through Section 829-6 will be satisfactorily addressed;
- (2) there are no other areas on the site suitable for detention; and
- (3) there will be no significant impact on the karst system or upon water quality.

In cases where concentrated runoff is directed to sinkholes, temporary and permanent erosion control measures, as detailed in a plan approved by the Administrator shall be implemented to prevent channel erosion.

(G) Modification of Sinkholes to Increase Outflow Rates. Increasing outflow rates of sinkholes by excavating the sinkhole eye or installing disposal wells for diverting surface runoff to the groundwater system is prohibited, unless:

- (1) it is demonstrated to the satisfaction of the Administrator and/or the Drainage Engineer that such an action is necessary to safeguard persons or property from clear and imminent danger; or
- (2) such an action is required to implement a drainage and/or erosion control plan that was approved by the Administrator.

(H) Altered Sinkholes. Filling or altering of sinkholes without an improvement location permit constitutes a zoning violation. In the event, corrective measures must be taken. No corrective or remedial measures shall be undertaken until a remediation plan has been approved by all relevant County entities or representatives and the Administrator has issued an improvement location permit for the plan. No building permits will be issued, or zoning or subdivision approvals granted until the remedial measures specified in the improvement location permit have been completed and approved.

(I) Airport Evaluation. With respect to all land owned, used and/or held by the Monroe County Board of Aviation Commissioners (BAC) for airport purposes, a Section 829-4 sinkhole evaluation (Airport Evaluation) may be made for the entire property (Airport Property). If made for the entire Airport Property, the Airport Evaluation shall be submitted to the Administrator, the Monroe County Drainage Board and the Monroe County Plan Commission for their review.

Upon a finding of compliance with this chapter and with other relevant County Code chapters, the foregoing entities shall approve the Airport Evaluation.

- (1) All future development, construction and land disturbing activities (Development Activities) at the Airport Property shall be:
 - (a) Consistent with the approved Airport Evaluation;
 - (b) Remedial actions suggested by the Airport Evaluation and required as a part of the Airport Evaluation approval may be implemented at one time or may be implemented in phases in conjunction with future Development Activities; and,
 - (c) For each proposed Development Activity, BAC shall seek site plan approval and, in connection with that process, shall submit for review and approval that portion of the Airport Evaluation relevant to the proposed Development Activities.
- (2) The original Airport Evaluation shall remain in full force and effect for a period of five (5) years from the date it is approved by the County Planning Commission. During that period of time, Development Activities at the Airport Property are subject to the approved terms and provisions of the Airport Evaluation and to the zoning and drainage regulations in effect on the date the Airport Evaluation was approved.
- (3) The Airport Evaluation shall be re-evaluated after a five (5) year period.
 - (a) The BAC may apply for additional five (5) year extensions without limitation;
 - (b) Each request for a re-evaluation of the Airport Evaluation shall be reviewed by the Administrator and may be approved administratively, subject to compliance with current law; and,
 - (c) If the Administrator finds that further extension of the Airport Evaluation is not possible under the Federal, State or County Code regulations in effect at the time of review, the BAC shall be promptly notified and shall be given a period of one (1) year beyond the expiration of the current five (5) year period to bring the Airport Evaluation into compliance with the relevant regulations.
- (4) The Airport Evaluation shall be consistent with the Federal and State authorities with respect to Airport Property development requirements.
 - (a) Federal and State standards and requirements will supersede local standards in the event of a conflict or discrepancy; and

- (b) In the event that Federal and/or State standards change during the period Airport Evaluation approval, activities may continue in accordance with such changes until the end of the period for which the Airport Evaluation was approved.

829-4. Sinkhole Evaluation and Plan Requirements

A Sinkhole Evaluation shall be performed for each site subject to this chapter (i.e., sites upon which sinkholes are fully or partially located and/or which drain to sinkholes). A Sinkhole Evaluation shall include the information set forth in subsections A through F of this section.

The following types of developments or sites may be excepted from full compliance with the Sinkhole Evaluation requirements upon the petitioner's request and a finding by the Administrator that significant drainage or water quality impacts will not result from the development or the use of the site:

- (1) administrative and minor subdivisions;
- (2) lots created greater than 10 acres for agricultural and residential uses; and
- (3) existing lots of record for which single-family residential use is proposed.

The above notwithstanding, neither the Administrator nor the Drainage Board may except a development or a site from subsection 829-4 (E). The burden of proof for establishing that there will be no significant impacts shall rest with the petitioner.

(A) A plat or site plan for the proposed subdivision or development, setting forth the following information for each of the enumerated items:

- (1) Sinkholes
 - (a) Location and limits of the area of the sinkhole depression as determined by field surveys or other reliable sources as may be approved by the Administrator. Location of sinkholes based solely upon USGS 7 ½ Minute Series Quadrangle Maps will not be considered sufficient unless field verified by a registered Indiana Surveyor, Engineer, or geologist.
 - (b) Location and elevation of the sinkhole eye or low point.
 - (c) Topographic contours at maximum intervals of two (2) feet, and spot elevations sufficient to determine the low point on the sinkhole rim and the profile of the potential overflow areas.
 - (d) Minimum floor elevations of any existing structures located within the sinkhole rim.

drainage

- (e) Elevation of any public or private roadway or drive located within or adjacent to the sinkhole.
 - (2) Flooding limits as determined in Section 829-6.
 - (3) Water considerations specified in Section 829-7, including, without limitation:
 - (a) The approximate location of public or private water supply sources such as springs or wells within 500 feet of the site.
 - (b) Boundaries of any known recharge areas to wells or springs.
 - (4) Other geologic features: location of caves, springs, faults and fracture trends, geologic mapping units.
 - (5) Proposed discharge points: the location, type and size of all points at which concentrated discharges of stormwater into the sinkhole are proposed. The drainage area to each point of concentrated discharge shall be delineated on the plan and the size of the area noted.
 - (6) Existing watercourses which drain into the sinkhole.
 - (7) All other information required to demonstrate or assess compliance with this chapter, as specified by the Administrator.
 - (8) The location of the foregoing items with respect to the location of the proposed or existing roads, detention ponds, significant landscaping features, property lines, underground utilities, and other structures.
- (B) A drainage area map showing the sinkhole watershed area, and where the site is located in a sinkhole cluster area. This map shall be extended to include, in the watershed area, any sinkholes located downstream of the site which may receive overflow drainage from the site.
- (C) Proposed SCA in accordance with Chapter 829-3 (C).
- (D) An analysis of the orientation and flow of the sinkhole drainage system, as detailed on the subsection (B) map. The use of dye trace injection testing to produce an accurate mapping of the system may be required by the Administrator when the system drains towards an area that has known flooding problems and for which the flow pattern has not been established through previous dye testing, and when significant increases or decreases in the runoff to sinkholes is expected to result from the proposed development. Significant increases generally occur if the residential density is greater than one lot per two acres (or a commercial development with equivalent impervious surfaces).

- (E) The approximate location of karst features must be shown on the final plat based on the best available mapping and/or noted on the deeds if no plat is recorded for the subdivision.
- (F) All other information deemed necessary by the Administrator.

829-5. Permit Requirement

No person or persons shall engage in the grading of land or modification of a sinkhole within the SCA or the area that would be covered by a SCA as described in 829-3 (C) without first securing an improvement location permit from the Administrator .

- (A) The owner of the property or person having an interest therein shall submit an application for a permit to the Administrator along with the sinkhole evaluation required by 829-4. The Administrator shall submit all applications to the County Drainage Engineer for review and comment and may, upon the Drainage Engineer's recommendation, submit an application to the Drainage Board for review and comment.
- (B) Upon review of the information presented by the applicant, the site, and other information as may be available, the Administrator may issue a permit for work to be performed in the SCA.
 - (1) All work shall be performed in accordance with the requirements of the Zoning Ordinance and any conditions of permit approval; and,
 - (2) The Administrator may designate certain areas where grading or construction equipment is not permitted or is otherwise limited.
- (C) Karst-Related Non-Buildable Areas. In addition to establishing a plan for grading and use of construction equipment, the Administrator may, based upon the topography, geology, soils, history of the sinkhole (such as past filling) and the developer's engineer's storm water analysis and plan, establish sinkhole-related non-buildable areas:
 - (1) No buildings, parking areas, grading or other structures shall be permitted within the sinkhole-related non-buildable area unless otherwise authorized by the Administrator; and
 - (2) No private drives, streets, and highways shall be permitted within the sinkhole-related non-buildable area unless the County Highway Engineer and Drainage Engineer conclude that traffic safety considerations outweigh stormwater and water quality considerations.

829-6. Flooding Considerations

- (A) Sinkhole Flooding Area. Except in cases in which the annual exceedance probability (AEP) of 1% (100 year storm) has been determined in a published

flood insurance study, the sinkhole flooding area shall be determined for each sinkhole for both pre-development and post-development conditions, assuming no subsurface outflow from the sinkhole.

Where the estimated volume of runoff exceeds the volume of the sinkhole depression, the depth, spread and path of overflow shall be estimated using methods established by the Drainage Board and shown on the plan.

The overflow volume shall be included in determining the maximum estimated flooding elevations in the next downstream sinkhole. This analysis shall continue downstream until the lowest sinkhole of the sinkhole cluster is reached or overflow reaches a surface watercourse.

The volume of runoff considered shall be that which results from a rainstorm with a 1% AEP and a duration of forty-eight (48) hours. The runoff volume shall be determined by the method set forth in the Natural Resource Conservation Service's TR-55 Manual.

No further flooding analysis will be required provided that:

- (1) The post-development flooding area of any sinkhole which receives drainage from the site is located entirely on the site.
 - (2) A drainage easement covering the post-development flooding area is provided for any off-site sinkhole or portion of a sinkhole which receives increased peak rates of runoff from the site. If the receiving sinkhole is not contiguous to the site, an easement must also be provided for the waterway which connects the site to the sinkhole.
 - (3) The minimum floor elevation of any existing structure is at least two (2) feet higher than the estimated flooding elevation from the 1% AEP 48-hour storm.
 - (4) The increase in volume of runoff from the site does not cause the flooding depth on any existing public road to exceed the maximum depth as determined by the Drainage Board.
- (B) Detailed Flooding Analysis. In cases where the conditions set forth in (A) above cannot be met, a detailed flooding analysis will be required if any increase in runoff volume is proposed or expected. As part of the detailed flooding analysis, a runoff model must be made and a reservoir routing analysis performed for the sinkhole watershed using hydrograph techniques as established by the Drainage Board.
- (C) The following alternative methods may be proposed and approved, singly or in combination, to keep flooding levels at pre-development levels:

- (1) Diversion of Excess Runoff to Surface Watercourses. Where feasible, increased post-development runoff may be diverted to a surface watercourse, provided that
 - (a) Any increase in peak runoff rate in the receiving watercourse does not create or worsen existing flooding problems downstream; and
 - (b) The diverted storm water remains in the same surface watershed.

Storm sewers, open channels and other appurtenances provided for diversions shall be designed in accordance with applicable sections of these Design Criteria.

The effect of diverted water on downstream watercourses and developments, and requirements for additional detention facilities prior to release of runoff to the surface watercourse shall be determined as established by the Drainage Board.

- (2) Storage of Excess Runoff within the Sinkhole Watershed. If consistent with the intent of this chapter, detention facilities may be constructed within the sinkhole watershed or the area of the sinkhole outside of the sinkhole flooding area as determined for post-development conditions.

- (D) The flooding considerations set forth in this section are designed and are intended to ensure that:

- (1) Inflow rates to the sinkhole are maintained at or below pre-development values; and
- (2) Sediment and erosion control and water quality considerations set forth in this chapter can be satisfied.

829-7. Water Quality Considerations

Because sinkholes provide direct recharge routes to groundwater, water quality in wells, caves, and springs may be affected by discharge of runoff from developed sinkhole areas. Consequently, and as more fully specified in subsections A through D below, the Sinkhole Evaluation must address potential impacts of proposed development on receiving groundwaters and must propose water quality management measures to mitigate such impacts.

- (A) Receiving Groundwater Use. The Sinkhole Evaluation Report shall identify whether the site lies within a critical area or a sensitive area based upon the following classifications.
 - (1) Critical Areas. The following areas are classified as critically sensitive to contamination from runoff and thus, are critical areas for purposes of this chapter:

- (a) Areas within 100 feet of private water supply wells.
- (b) Areas within 300 feet of public water supply wells.
- (c) Areas within 500 feet of springs used for public or private water supply.
- (d) Areas within 1000 feet of caves providing habitat to rare or endangered species.

The distances listed above may be extended by the Administrator where the recharge areas for a well, spring, or cave have been determined by studies by a qualified engineer or geologist. The length of the extension may be no greater than necessary to achieve the policies of this chapter.

- (2) Sensitive Areas. Sinkhole areas that are not within critical areas are classified as sensitive for groundwater contamination for purposes of this chapter.

(B) Groundwater Contamination Hazard. The relative potential for groundwater contamination shall be classified as low, moderate, or high depending upon the nature of the proposed land use, development density and amount of directly connected impervious area. The Sinkhole Evaluation shall identify whether the proposed development poses a low, moderate, or high hazard to groundwater uses, as defined below:

- (1) Low Hazard. The following land uses are classified as posing a relatively low hazard to groundwater contamination:
 - (a) Residential developments on sewer, provided directly connected impervious areas discharging to the sinkhole are less than or equal to one (1) acre in total area;
 - (b) Parks and recreation areas;
 - (c) Low density commercial and office developments, provided directly connected impervious areas discharging to the sinkhole are less than or equal to one (1) acre in total area; and
 - (d) Discharge from graded areas less than or equal to one (1) acre.
- (2) Moderate Hazard. The following land uses are classified as posing a relatively moderate hazard to groundwater contamination:
 - (a) Concentrated discharge from streets, parking lots, roofs, and other directly connected impervious areas having an area greater than one (1) acre and less than or equal to five (5) acres;

- (b) Multifamily residential developments and higher intensity office developments, provided the directly connected impervious areas discharging to the sinkhole are less than or equal to five (5) acres; and
 - (c) Discharge from graded areas greater than one (1) acre and less than or equal to five (5) acres.
- (3) High Hazard. The following land uses are classified as posing a high hazard to groundwater contamination:
- (a) Collector and arterial streets and highways;
 - (b) Railroads;
 - (c) Concentrated discharge from streets, parking lots, roofs, and other directly connected impervious areas having an area greater than five (5) acres;
 - (d) Commercial, industrial, and manufacturing areas;
 - (e) Individual wastewater treatment systems;
 - (f) Commercial feed lots or poultry operations; and
 - (g) Discharge from graded areas greater than five (5) acres.

- (C) Water Quality Management Measures. The majority of sinkholes drain a limited watershed area. For sinkholes where the surrounding drainage area is small enough that the area draining to the sinkhole flows predominantly as sheet flow, potential impacts on water quality can be addressed in many cases by erecting and maintaining reliable silt control barriers around the sinkhole during construction and providing a vegetative buffer area around the sinkhole to filter out potential contaminants.

When the volume of runoff into the sinkhole increases to the point where flow becomes concentrated surface flow, the degree of effort required to capture and filter out contaminants increases significantly.

Concentrated surface flow occurs naturally when the sinkhole watershed area reaches a sufficient size for watercourses leading into the sinkhole to form. Concentrated surface flow results as urbanization occurs due to construction of roads, storm sewers, and drainage channels. Subsurface flows can become concentrated through utility trenches.

- (D) Mitigation of Stormwater Runoff. The following water quality management measures may be used to mitigate the impact of storm water runoff quality. Temporary sediment controls are required for all sites. The other measures listed

may be used singly or in combination as needed based upon the potential groundwater contamination hazard of the proposed development.

(1) Sediment and Erosion Control

- (a) Nonconcentrated (sheet) flow: existing ground cover shall not be removed within twenty-five (25) feet of the sinkhole flooding area and a temporary silt barrier shall be erected and maintained around the outer perimeter of the buffer area during the construction period. Vegetative cover must be of sufficient quality and density to provide desired filtration. If existing vegetative cover is sparse, it must be improved to sufficient quality and density to provide the desired filtration.
- (b) Concentrated surface and subsurface flow: a sediment basin will be required at each point where concentrated flows are discharged into the sinkhole. Sediment basins shall be designed according to criteria set forth in the *Indiana Handbook for Erosion Control in Developing Areas*. A permanent sediment basin may be required by the Drainage Board in some cases. This requirement shall be based on the watershed area, the disturbance that the proposed project will create, and the availability of suitable sites for a sediment basin.

(2) Minimizing Directly Connected Impervious Area.

- (a) The groundwater contamination hazard category for impervious areas may be reduced by reducing the amount of directly connected impervious area. This is the area of roofs, drives, streets, parking lots, etc., which are connected via paved gutters, channels, or storm sewers.
- (b) Directly connected impervious areas can be reduced by providing sized grass swales, vegetative filter strips or other Best Management Practices to separate paved areas.

(3) Diversion of Runoff.

- (a) Concentrated discharges to sinkholes can be reduced to manageable levels or avoided by diverting runoff from impervious areas away from sinkholes where possible.
- (b) Diversions shall be done in a manner that does not increase flooding hazards on downstream properties and, generally, shall not be directed out of the surface watershed in which the sinkhole is located.

(4) Filtration Areas. For areas having a low groundwater contamination hazard and where flow into the sinkhole occurs as sheet flow, water quality requirements can be satisfied by maintaining a permanent

vegetative buffer area with a minimum width of twenty-five (25) feet around the sinkhole flooding area.

- (5) Grassed Swales and Channels.
 - (a) For areas having a low groundwater contamination hazard, concentrated flows from directly connected impervious areas of less than one (1) acre may be discharged into the sinkhole through grassed swales and channels.
 - (b) Swales and channels shall be designed for non-erosive velocities and appropriate temporary erosion control measures such as sodding or erosion control blankets shall be provided.
- (6) Storage and Infiltration. Storage and infiltration basins shall be designed to capture the first one-half (0.5) of an inch of runoff from the tributary drainage area and release the runoff over a minimum period of twenty-four (24) hours. Standard outlet structures for sedimentation and infiltration are shown in the *Indiana Handbook for Erosion Control in Developing Areas*. Storage and infiltration will be required in the following cases:
 - (a) All areas having a high groundwater contamination hazard.
 - (b) Areas having a moderate groundwater contamination hazard and where concentrated inflow occurs.
- (7) Hazardous and Toxic Materials. Facilities which involve storage or handling of hazardous or toxic materials shall comply with the State of Indiana Department of Environmental Management.

1.0 INTRODUCTION

VET Environmental Engineering, LLC (VET) was retained by the Monroe County Board of Commissioners (Monroe County) to perform a wetlands and jurisdictional waters delineation on the property located at South State Road 37 and West Fullerton Pike, Bloomington, Monroe County, Indiana (Site). The Site is comprised of approximately 87.13 acres of vacant agricultural land (Parcel Number 53-08-18-300-001.000-009). Monroe County plans to develop the Site for municipal purposes.

The Site's current owner recorded conservancy and karst easements for the Site on August 18, 2015 at the Monroe County Recorder's Office. Smith Design Group, Inc. (Smith), formerly Smith Brehob and Associates, Inc. (Brehob), prepared the legal descriptions of the easements and the figure documenting the location of the easements. The easements were recorded to protect natural areas and karst features identified on-Site. There are four conservancy easements (Conservancy 'A' through 'D') and five karst easements (Karst 'A' through 'E'). The areas are displayed graphically on **Exhibit 4**. The document specifies several requirements including the prohibition of land disturbing activity, mowing restrictions, and explicit approval from the City of Bloomington Planning & Transportation Department to conduct maintenance within the easements such as removal of dead trees and/or invasive species.

Pursuant to Monroe County's purchase of the Site, VET performed a Phase I Environmental Site Assessment (ESA) dated August 10, 2022 and Site Reconnaissance dated August 11, 2022 at the Site. The Phase I ESA and Site Reconnaissance identified potential wetlands and jurisdictional waters at the Site. VET recommended Monroe County conduct a formal wetlands and jurisdictional waters delineation prior to development of the Site as permitting and compensatory mitigation may be required through the United States Army Corps of Engineers (USACE) and/or the Indiana Department of Environmental Management (IDEM).

VET was contracted to determine whether the potential wetland areas identified by the 2022 Phase I ESA and Site Reconnaissance are regulated wetlands, and, if so, to delineate their extents, and to determine the extents of jurisdictional waters at the Site. VET representatives Ms. Sara Hamidovic, MS, PE, CHMM, CPESC and Mr. Evan Owings conducted the wetlands and jurisdictional waterways delineation at the Site between August 22, 2022 and August 24, 2022. VET evaluated soils, hydrology, and vegetation at nine wetland data points at the Site: DP-1 through DP-9. VET evaluated jurisdictional streams based on presence of bed and bank, ordinary high water mark (OWHM), and connection to jurisdictional waters.

Based on Site investigations, VET identified and delineated six regulated wetlands comprising approximately 0.903 acres, and 25 jurisdictional waters comprising approximately 7,021 linear feet at the Site. Approximately 0.89 acres of wetlands and 1,570 linear feet of stream are located outside the existing conservancy and karst easements at the Site. VET also identified six potential karst features not previously identified by desktop reconnaissance. Two of the potential karst features identified by VET during field investigations are located within the Karst 'B' easement. Four of the potential karst features identified by VET during field investigations are not located within the boundaries of the existing conservancy and karst easements. The extents of the regulated wetlands (Wetlands #1 through #6), wetland data points, jurisdictional streams (Streams #1 through #25), and the potential karst features are displayed on **Exhibit 4**. Exhibits (1 – 4), photographs of the Site (**Attachment 1**), wetland

field data sheets, and daily field logs (**Attachment 2**), are included to aid in understanding context of the Site and evaluated features.

2. OBJECTIVE AND SCOPE

The objective of this study was to delineate the extents of regulated wetland areas and jurisdictional waterways at the Site to determine whether USACE and/or IDEM permitting or compensatory mitigation is required prior Site development. The objective of the study was also to determine whether identified regulated wetlands or jurisdictional waterways lie within or outside the existing conservancy and karst easements at the Site.

Information was collected from desktop reconnaissance and field investigations. The desktop reconnaissance includes a review of readily ascertainable information such as topographic contours, soils, floodplain, and wetland maps. VET's professional opinions stated herein are based on generally accepted wetland and waters determination and delineation methods and procedures conventional to the environmental field at the time the study was performed and with respect to due care. VET's opinions are not to be construed as legal advice. Legal counsel should be consulted when deemed necessary by the reader.

3.0 METHODS

3.1 WETLANDS

The USACE defines wetlands as: *“Those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soils. Wetlands generally include swamps, marshes, bogs, and similar areas”* (33 CFR 328.3).

Three criteria are used to evaluate the presence of wetlands: hydrophytic vegetation, hydric soils, and wetland hydrology. All three criteria must be met for an area to be identified as a wetland subject to regulatory jurisdiction under Section 404 of the CWA. In certain instances, USACE may not claim jurisdiction over wetlands that are isolated from jurisdictional waterways. However, isolated wetlands are regulated by IDEM under Indiana's (2004) State Isolated Wetlands Law (IC 13-18-22).

Construction projects involving mechanical vegetation clearing, placing fill materials, excavation, bridges, culverts, or stream crossings that impact Waters of the U.S. may require a CWA Section 404 permit from the USACE and/or a CWA Section 401 permit from IDEM's Office of Water Quality (OWQ). Impacts to isolated wetlands require a permit from IDEM. Similar activities taking place in the floodway or floodplain of a waterway may require an additional permit from IDNR Division of Water.

3.1.1 HYDROPHYTIC VEGETATION

The presence of hydrophytic vegetation is *“readily observable evidence that episodes of inundation or soil saturation lasting more than a few days during the growing season have occurred repeatedly over a period of years and that the timing, duration and frequency of wet conditions have been sufficient to produce a characteristic wetland plant community and hydric soil morphology”* (USACE 1987).

Hydrophytic vegetation is classified under several subcategories that include Obligate Wetland, Facultative Wetland, Facultative, Facultative Upland, and Upland. Plants are classified based on the estimated probabilities of a particular species occurring in wetland conditions. The indicator status of each species identified as part of this wetland delineation was determined using the *National List of Plant Species that Occur in Wetlands: North Central (Region 3)*. Each indicator status is defined below:

- Obligate Wetland (OBL) – Occur almost exclusively in wetland areas under natural conditions (estimated probability >99%).
- Facultative Wetland (FACW) – Usually occur in wetlands but occasionally occur in non-wetland (upland) areas (estimated probability 67% to 99%).
- Facultative (FAC) – Equally likely to occur in both wetland and upland areas (estimated probability 33% to 67%).
- Facultative Upland (FACU) – Usually occur in upland areas, but occasionally occur in wetlands (estimated probability 1% to 33%).
- Obligate Upland (UPL) – Occur almost always in upland areas (estimated probability >99%).

OBL, FACW, and FAC species are considered wetland species. Areas are considered to meet hydrophytic vegetation criteria when more than 50% of the dominant plant species in each vegetation strata (tree, sapling/shrub, herb, and woody vine) within a plant community are wetland species (Dominance Test).

3.1.2 HYDRIC SOILS

Hydric soils are soils that “*formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part*” (USACE, 1987). Soils must be flooded, ponded or saturated for at least one week during the growing season when soil temperatures exceed 41°F. Anaerobic (oxygen deficient) conditions cause changes in the soil matrix color, mottling, structure, and chemistry. These properties are used to identify hydric soils from non-hydric soils.

3.1.3 WETLAND HYDROLOGY

“*Wetland hydrology indicators provide evidence that the site has a continuing wetland hydrologic regime and that hydric soils and hydrophytic vegetation are not relics of a past hydrologic regime*” (USACE, 1987). Wetland hydrology is defined as the presence of water for a significant period of time at or near the surface during the growing season. If during the field investigation there is no evidence of water at the surface (12” to 18” below ground surface), wetland indicators (primary and/or secondary) may confirm periodic wetland hydrology.

3.2 JURISDICTIONAL WATERS

Jurisdictional waters, or waters of the United States (WOTUS) are regulated by the United States Army Corps of Engineers (USACE) and include (1) all waters currently or previously used for interstate or foreign commerce, (2) all interstate waters and interstate wetlands, (3) tributaries to

navigable WOTUS, including adjacent wetlands, lakes, and ponds, (4) interstate waters and their tributaries, including adjacent wetlands; and, (5) all other waters of the U.S. not identified above, such as intrastate lakes, rivers, intermittent streams, and other waters that are not part of a tributary system to interstate waters or to navigable waters of the U.S., where the use, degradation or destruction of these waters could affect interstate or foreign commerce (40 CFR 230.3(s)). In Indiana, all WOTUS are also Waters of the State.

Section 404 of the Clean Water Act (CWA) defines the limit of jurisdiction as the OHWM. Therefore, any drainage channel that exhibits an OHWM is classified as jurisdictional and is subject to regulation. OHWM is defined as, *“the line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of the soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas”* (USACE, 2005).

4.0 DESKTOP RECONNAISSANCE

4.1 WETLANDS AND FLOOD ZONES

Wetlands, flood zones, and waterways identified during the desktop reconnaissance are displayed on **Exhibit 2**. The National Wetland Inventory (NWI) did not identify any wetlands on-Site. Floodplain data was obtained from the Federal Emergency Management Association (FEMA) Flood Rate Insurance Maps (FIRM). This data represents areas in Indiana that are located in a floodway or flood hazard zone. No floodways were identified on-Site.

4.2 WATERWAYS

The desktop reconnaissance identified six perennial streams on-Site according to the United States Geological Survey’s (USGS) National Hydrography Dataset (NHD). Five of the streams are located within the forested area located along the northern and eastern Site boundaries. The streams along the Site’s eastern boundary generally run from west to east toward the Site’s eastern boundary. Streams along the northern boundary generally run south to north toward the Site’s northern boundary. The sixth stream is located on the western Site boundary and is coincident with a mapped karst feature. All mapped waterbodies are displayed on **Exhibit 2**.

4.3 SOIL SURVEY

The United States Agricultural Department (USDA) Web Soil Survey (WSS) indicates that the Site is largely underlain by Bedford Silt Loam and Crider Silt Loam (**Exhibit 3**). All soils present on the Site are included in **Table A**. No soils mapped on-Site are classified as hydric soils according to the 2016 National Resources Conservation Service (NRCS) Hydric Soils List for Monroe County, Indiana.

TABLE A. SOIL SURVEY SUMMARY		
Map Symbol	Soil Type Name	Percent of Site (%)
BdB	Bedford Silt Loam, 2-6% Slopes	40.5
CrC	Crider Silt Loam, 6-12% Slopes	36.3
HaD	Hagerstown Silt Loam, 12-18% Slopes	17.2
CaD	Caneyville Silt Loam, 12-18% Slopes	5.9

5.0 FIELD INVESTIGATION

VET representatives Ms. Sara Hamidovic, MS, PE, CHMM, CPESC and Mr. Evan Owings conducted a wetlands and jurisdictional waters delineation at the Site between August 22, 2022 and August 24, 2022. Jurisdictional waterways were delineated on August 22, 2022, and regulated wetlands were delineated on August 23 and 24, 2022. Select photos taken during the field investigation are included in **Attachment 1**.

The Site is located at the northeastern corner of the intersection between South State Road 37, also known as Interstate 69, and West Fullerton Pike. Access to the Site is provided by the northernmost exit on the roundabout east of South State Road 37/Interstate 69 on West Fullerton Pike. The ground surface of the Site slopes radially outward from the middle-western portion of the Subject Property at an approximate surface elevation of 822' above mean sea level (MSL) toward the northern, eastern, and western boundaries of the Site at approximate surface elevations of 780', 740', and 804' above MSL, respectively. A local high elevation of 824' above MSL exists on the northern Site boundary west of the eastern tree line. Surface water runoff flows as sheet flow toward the northern, eastern, and western Site boundaries. Storm water discharges from the Site as channelized flow via the observed ephemeral and mapped perennial streams to Clear Creek from the northern and eastern Site boundaries, and via sheet flow toward the western Site boundaries. Surface water runoff from the Site discharges to Clear Creek, which is within the East Fork of the White River Basin.

On August 22, 2022, VET delineated the extent of jurisdictional streams at the Site. VET identified jurisdictional streams on the northern and eastern portions of the Site. Streams on the Site were evaluated for presence of bed and bank, an OHWM, and connection to other jurisdictional streams. On August 23, 2022, VET excavated test pits at five locations within three suspected wetland areas on the approximate northern half of the Site. VET delineated Wetlands #1, #2, and a suspected wetland area by excavation of test pits within and outside the suspected wetland areas. VET observed hydrophytic vegetation coincident with rutting from vehicle tires. The hydrophytic vegetative stratum appears to have developed recently within the vehicle tire ruts. Based on field observations and review of historical aerial imagery, it is VET's opinion that these areas do not constitute regulated wetlands.

On August 24, 2022, VET excavated test pits at four locations within suspected wetland areas on the approximate southern half of the Site. VET delineated Wetlands #4 and #5 by excavation of test pits within and outside the suspected wetland areas. Wetland #6 was delineated without excavation of test pits because it is coincident with the preexisting Karst 'A' easement. VET observed suspected wetland features coincident with rutting from vehicle tracks. VET observed hydrophytic vegetation coincident with rutting from vehicle tires. The hydrophytic vegetative stratum appears to have developed recently within the vehicle tire ruts. Based on field observations and review of historical aerial imagery, it is VET's opinion that these areas do not constitute regulated wetlands.

During field investigations, VET identified six potential karst features that were not previously identified during desktop reconnaissance. One potential karst spring and one sinking stream were identified within the boundaries of the Karst 'B' easement. One potential karst spring and one sinking stream were identified to the north of the Karst 'C' easement. Two potential sinkholes were identified on the northwestern portion and the southwestern portion of the Site, both outside the boundaries of existing conservancy and karst easements.

Descriptions of the wetland delineation and jurisdictional waters delineation at the Site are in **Sections 5.1** and **5.2**, respectively. Jurisdictional determinations and potential impacts for the wetlands and waters located outside the boundaries of the existing conservancy and karst easements are tabulated below in **Table B**. On-Site regulated wetlands and jurisdictional streams identified by VET are displayed on **Exhibit 4**.

Table B. Wetlands and Waters Jurisdictional Determinations

5.1 WETLAND DELINEATION

VET performed a delineation of the potential wetland areas identified by the 2022 Phase I ESA and Site Reconnaissance on August 23 and 24, 2022. The wetland delineation was not restricted by weather conditions. Weather conditions during the delineation were characteristic of the region. The potential wetland areas were identified based on observed geomorphic position, observed vegetation communities, and presence of hydrology indicators.

Potential wetland areas were identified in ten locations based on Site observations. In order for an area to be identified as a wetland subject to regulatory jurisdiction under Section 404 of the Clean Water Act, it must exhibit hydrophytic vegetation, hydric soils, and wetland hydrology. Wetland boundaries were delineated based on observed changes in vegetative stratum and condition, hydrology, and underlying soils. Based on field investigations, VET determined that there are six regulated wetlands at the Site, comprising a total area of approximately 0.903 acres. Approximately 0.858 acres of the identified regulated wetlands are located outside the boundaries of existing conservancy and karst easements at the Site. Approximately 0.045 acres of the identified regulated wetlands are located within the existing conservancy and karst easements at the Site.

VET utilized USACE Wetland Determination Data Forms for the Midwest Region to evaluate data points in suspected wetland areas. Descriptions of the regulated wetlands and results of the field investigations are outlined below. Wetland data point locations and delineated regulated wetland areas are shown on **Exhibit 4**. Wetland Determination Data Forms are included as **Attachment 2**.

Wetland #1

Wetland #1 is located within a manmade concave depression developed for storm water control and storage on the northwestern portion of the Site, to the east of a vegetated area along the western Site boundary. VET evaluated two wetland data points (DP-1 and DP-2) during field investigations to delineate Wetland #1. DP-1 was excavated within the concave depression in an area dominated by hydrophytic vegetation. VET observed significantly disturbed soil and hydrology at the location of DP-1. The disturbed soil and hydrology VET observed was likely due to topsoil removal at the Site and construction of the observed rock check dam for storm water control. VET observed wetland hydrology characteristics including water-stained leaves (B9), drainage patterns (B10) and geomorphic position (D2) at the location of DP-1. VET observed hydric soils exhibiting the depleted matrix indicator (F3), and hydrophytic vegetation at the location of DP-1. Based on the presence of wetland hydrology, hydric soils, and hydrophytic vegetation, VET determined that DP-1 is located within a regulated wetland.

DP-2 was excavated immediately outside the area dominated by hydrophytic vegetation and upgradient of DP-1, within the concave depression to delineate the extent of the regulated wetland. DP-2 is located within a concave depression on a plain to the northeast of DP-1. VET did not observe wetland hydrology characteristics, hydric soils, or hydrophytic vegetation at the location of DP-2. VET determined that DP-2 is located outside of the regulated wetland identified by DP-1. Wetland #1 is delineated across and opposite a topographic divide and rock check dam. This area of Wetland #1 exhibits the same wetland hydrology, vegetation, and hydric soils characteristics as the area delineated by DP-1 and DP-2.

Based on the results of the wetland determinations for DP-1 and DP-2, it is VET's opinion that Wetland #1 is partially a palustrine emergent and partially a palustrine forested wetland and comprises approximately 0.277 acres outside the boundaries of the existing conservancy and karst easements at the Site.

Wetland #2

Wetland #2 is located within a manmade concave depression in a swale along the manmade berm developed for storm water control on the northeastern portion of the Site, to the west of the eastern tree line. VET evaluated two wetland data points (DP-4 and DP-5) during field investigations to delineate Wetland #2. DP-4 was excavated within the concave depression to the west of the eastern tree line in an area dominated by hydrophytic vegetation. VET observed wetland hydrology characteristics including surface soil cracks (B6) and geomorphic position (D2) at the location of DP-4. VET observed hydric soils exhibiting the depleted matrix indicator (F3) and hydrophytic vegetation at the location of DP-4. Based on the presence of wetland hydrology, hydric soils, and hydrophytic vegetation, VET determined that DP-4 is located within a regulated wetland.

DP-5 was excavated immediately outside and upgradient of DP-4 to delineate the extent of the regulated wetland. DP-5 is located within a concave depression on a plain to the northwest of DP-4. VET observed wetland hydrology characteristics including surface soil cracks (B6) and geomorphic position (D2) at the location of DP-5. VET did not observe hydric soils at the location of DP-5. VET observed hydrophytic vegetation at the location of DP-5. Although hydrophytic vegetation and wetland hydrology were observed at the location of DP-5, the lack of hydric soils led to the determination that DP-5 is located outside the regulated wetland identified by DP-4.

Based on the results of the wetland determinations for DP-4 and DP-5, it is VET's opinion that Wetland #2 is a palustrine emergent wetland and comprises approximately 0.076 acres outside the boundaries of the existing conservancy and karst easements at the Site.

Wetland #3

Wetland #3 is located to the south and downgradient of Wetland #2, in a similar geomorphic position and within the same manmade swale and berm feature as Wetland #2. Wetlands #2 and #3 are both located within an apparent swale parallel to the eastern tree line on the Site. Wetland #3 exhibits the same wetland hydrology, vegetation, and hydric soils characteristics as Wetland #2, but is separated by an area exhibiting slightly higher elevation and predominantly upland plant community. Due to the similarity between delineated Wetland #2 and Wetland #3, VET did not excavate wetland data points at this location. It is VET's opinion that Wetland #3 is a palustrine emergent wetland and comprises approximately 0.027 acres outside the boundaries of the existing conservancy and karst easements at the Site.

Wetland #4

Wetland #4 is located within a slight concave depression in the center of the Site. VET evaluated two wetland data points (DP-6 and DP-7) during field investigations to delineate Wetland #4. DP-6 was excavated within the concave depression in an area dominated by hydrophytic vegetation. VET observed wetland hydrology characteristics including drainage patterns (B10) and geomorphic position (D2) at the location of DP-6. VET observed hydric soils exhibiting the redox depression indicator (F8), and hydrophytic vegetation at the location of DP-6. Based on the presence of wetland hydrology, hydric soils, and hydrophytic vegetation, VET determined that DP-7 is located within a regulated wetland.

DP-7 was excavated immediately outside and upgradient of DP-6 to delineate the extent of the regulated wetland. DP-7 is located within a concave depression on a larger plain to the southwest of DP-6. VET did not observe wetland hydrology characteristics, hydric soils, or hydrophytic vegetation at the location of DP-7. VET determined that DP-7 is located outside of the regulated wetland identified by DP-6. Based on the results of the wetland determinations for DP-6 and DP-7, it is VET's opinion that Wetland #4 is a palustrine emergent wetland and comprises approximately 0.398 acres outside the boundaries of the existing conservancy and karst easements at the Site.

Wetland #5

Wetland #5 is located within a manmade concave depression containing a small, conical riprap-lined feature, consistent with a potential sinkhole or armored storm water drainage inlet on the southwestern portion of the Site, to the west of the southern forested draw. VET evaluated two wetland data points (DP-8 and DP-9) during field investigations to delineate Wetland #5. DP-8 was excavated within the concave depression to the west of the southern forested draw in an area dominated by hydrophytic vegetation. VET observed wetland hydrology indicators including drainage patterns (B10) and geomorphic position (D2) at the location of DP-8. VET observed hydric soils exhibiting the depleted matrix indicator, and hydrophytic vegetation at the location of DP-8. Based on the presence of wetland hydrology, hydric soils, and hydrophytic vegetation, VET determined that DP-8 is located within a regulated wetland.

DP-9 was excavated immediately outside and upgradient of DP-8 to delineate the extent of the regulated wetland. DP-9 is located within a within a concave depression on a plain to the southeast of DP-8. VET did not observe wetland hydrology characteristics, hydric soils, or hydrophytic vegetation at the location of DP-9. Based on the results of the wetland determinations for DP-8 and DP-9, it is VET's opinion that Wetland #5 is a palustrine emergent wetland and comprises approximately 0.08 acres outside the boundaries of the existing conservancy and karst easements at the Site.

Wetland #6

Wetland #6 is located within the Karst 'A' easement on the western Site boundary. VET delineated Wetland #6 based on topography and vegetative stratum. Due to its small size and distinct difference in the vegetative stratum observed within Wetland #6 compared to its surroundings, and its existence entirely within the boundaries of the Karst 'A' easement, VET did not excavate wetland data points at this location. It is VET's opinion that Wetland #6 is a palustrine emergent wetland and comprises approximately 0.045 acres within the boundaries of the existing conservancy and karst easements at the Site. Proposed development at the Site is not expected to impact Wetland #6.

Non-Wetland Areas

VET evaluated suspected wetland areas where hydrophytic vegetation was observed at three additional locations at the Site. Based on field observations, it is VET's professional opinion that these three areas do not constitute regulated wetlands. The locations of the non-wetland areas are displayed on **Exhibit 4**.

One suspected wetland area is located in the central portion of the Site, to the southwest of Wetland #3. VET determined that this area exhibits recent emergence of hydrophytic vegetation

coincident with rutting from vehicle tire tracks. VET observed low biodiversity within the suspected wetland area. VET did not excavate wetland data points at this location. Based on field observations and review of historical aerial imagery, it is VET's opinion that this area is a transient wetland feature and does not constitute a regulated wetland.

The second suspected wetland area is located in the central portion of the Site, to the west of Wetland #2. VET determined that this area exhibits recent emergence of hydrophytic vegetation coincident with rutting from vehicle tire tracks. VET observed low biodiversity within the suspected wetland area. VET did not excavate wetland data points at this location. Based on field observations and review of historical aerial imagery, it is VET's opinion that this area is a transient wetland feature and does not constitute a regulated wetland.

The third suspected wetland area is located in a manmade concave depression developed for storm water control on the northern half of the Site, to the northwest of Wetland #2 and at the origination point of Stream #4. VET evaluated one wetland data point (DP-3) during field investigations to delineate the suspected wetland area. DP-3 was excavated within a concave depression on a plain adjacent to and upgradient of a vegetated draw on the northern portion of the Site, immediately east of Stream #4 (**Exhibit 4**). VET did not observe wetland hydrology characteristics, hydric soils, or hydrophytic vegetation at the location of DP-3. Based on the results of the wetland determination for DP-3, it is VET's opinion that the suspected wetland evaluated by DP-3 is not a regulated wetland.

5.2 JURISDICTIONAL WATERS DETERMINATION

Based on field investigations conducted on August 22, 2022, VET determined that 25 jurisdictional waterways exist at the Site. VET identified a total of approximately 7,021 linear feet of jurisdictional waters at the Site. Approximately 1,570 linear feet of jurisdictional waters identified at the Site are located outside of existing conservancy and karst easements.

Jurisdictional determinations were limited to within the Site boundaries. Descriptions of the jurisdictional streams are outlined below. The jurisdictional stream locations are displayed on **Exhibit 4**. The on-Site jurisdictional streams appear to be unnamed tributaries to Clear Creek. All of these streams are jurisdictional based on presence of bed and bank, OWHM, and connection to downstream jurisdictional waterways.

Streams #1-#4

Streams #1 through #4 are located in the forested area on the northwestern portion of the Site, and are 664.8, 451.6, 18.6, and 38.7 linear feet, respectively. Approximately 397.4 linear feet of Stream #1 are located outside the Conservancy 'A' easement within the upper portion of a forested draw. Stream #2 originates at a potential sinkhole to the west of the Conservancy 'A' easement. Approximately 262.9 linear feet of Stream #2 are located outside the Conservancy 'A' easement. Stream Segment #3 is approximately 18.6 linear feet and is entirely within the boundaries of the Conservancy 'A' easement. Stream #4 originates at a manmade concave depression developed for storm water control and a rock check dam in the area evaluated for wetland characteristics at DP-3. The entire length of Stream #4 (38.7 linear feet) is located outside the existing conservancy and karst easements at the Site.

Stream #5

Stream #5 is located in the forested area on the northern Site boundary. Stream #5 is approximately 44 linear feet and is located entirely outside the existing conservancy and karst easements at the Site.

Stream #6

Stream #6 is located in the forested area on the northeastern portion of the Site. The surficial expression of the stream originates at a potential karst spring and terminates at the location of the potential sinking stream located within the Karst 'B' easement. Stream #6 may be connected to an underground karst conduit. The surficial expression of Stream #6 is approximately 101.4 linear feet in length and is located entirely within the boundaries of the Karst 'B' easement.

Stream #7

Stream #7 is located in the forested area on the northeastern portion of the Site. The surficial expression of the stream is approximately 39.8 feet in length, originating at a potential karst spring and terminating at a potential sinking stream. Stream #7 may be connected to an underground karst conduit. The surficial expression of Stream #7 is not located within the existing conservancy and karst easements at the Site.

Streams #8-#10

Streams #8 and #10 are located in the forested area on the northeastern portion of the Site, in the vicinity of the Conservancy 'B' easement. Stream #8 originates at the location of the rock check dam developed for storm water control on the eastern side of Wetland #2. Stream #8 exhibits braiding within the Conservancy 'B' easement. Stream #8 is approximately 1,348.2 linear feet. Approximately 284.5 linear feet of Stream #8 are located outside the Conservancy 'B' easement. Stream #9 is approximately 86.7 feet in length and is entirely within the boundaries of the Conservancy 'B' easement at the Site. Stream #10 is approximately 267.3 linear feet and is located entirely within the boundaries of the Conservancy 'B' easement.

Streams #11-#19

Streams #11 through #19 are located in the forested area on the southeastern portion of the Site, in the vicinity of the Conservancy 'C' easement. Stream #11 is approximately 855.8 linear feet and is entirely within the Conservancy 'C' easement. Stream #12 is approximately 229.4 linear feet. Approximately 62.2 linear feet of Stream #12 are located outside the Conservancy 'C' easement. Streams #13, #14, and #15 are approximately 25.3, 103.7, and 45.3 linear feet, respectively, and are located entirely within the Conservancy 'C' easement.

Stream #16 is approximately 35.7 linear feet. Approximately 5.5 feet of Stream #16 are located outside the Conservancy 'C' easement. Stream #17 is approximately 529.9 linear feet. Approximately 223.6 linear feet of Stream #17 are located outside the Conservancy 'C' easement. Stream #17 exhibits braiding within the Conservancy 'C' easement. Stream #18 is approximately 256.6 linear feet. Approximately 87.3 linear feet of Stream #18 are located outside the Conservancy 'C' easement.

Stream #19 is approximately 51.2 linear feet and is located entirely outside the boundaries of Conservancy 'C' easement.

Streams #20-#24

Streams #20 through #24 are located in the forested area on the southeastern portion of the Site, in the vicinity of the Conservancy 'D' easement. Streams #20, #21, and #22 originate at the location of a manmade storm water detention basin, characterized by rock check dams developed for storm water control in the upper portion of a forested draw. Stream #20 is approximately 1,194.5 linear feet and is located entirely within the Conservancy 'D' easement. Stream #21 is approximately 11.1 linear feet and is located entirely within the Conservancy 'D' easement. Stream #22 is approximately 121.3 linear feet. Approximately 9.1 linear feet of Stream #22 is located outside the Conservancy 'D' easement. Stream #23 is approximately 141.1 linear feet and is located entirely within the Conservancy 'D' easement. Stream #24 is approximately 295.9 linear feet and is located entirely within the Conservancy 'D' easement.

Stream #25

Stream #25 is located adjacent to Wetland #5 on the southwestern portion of the Site. Stream #25 originates near a manmade concave depression lined with riprap, consistent with a potential sinkhole on the northeastern boundary of Wetland #5 and extends approximately 62.8 linear feet to the northeast. Stream #25 is located entirely outside the boundaries of existing conservancy and karst easements at the Site. VET determined that the area between the northeastern terminus of Stream #25 and Streams #20 and #23 is non-jurisdictional.

5.3 KARST FEATURES

Based on desktop reconnaissance, four karst features were identified along the Site's western boundary. The Site is in the Mitchell Plateau physiographic region of Indiana (IndianaMap, 2022). The presence of karst topography features (sinkholes, swallow holes, sinking streams, etc.) is documented within the Mitchell Plateau physiographic region (Gray, 2000, p.8). The Site is reportedly in an area where drainage is mostly through solution channels (Hartke and Gray, 1989, p.4).

During field investigations between August 22, 2022 and August 24, 2022, VET identified six additional potential karst features that were not identified during desktop reconnaissance. One potential karst spring and one sinking stream were identified at Stream #6 within the boundaries of the Karst 'B' easement on the northeastern portion of the Site. One potential karst spring and one potential sinking stream were identified to the north of the Karst 'C' easement at Stream #7, outside the existing conservancy and karst easements at the Site. One potential sinkhole was identified within Wetland #5 on the southwestern portion of the Site, outside the existing conservancy and karst easements at the Site. One potential sinkhole was identified on the northeastern portion of the Site, at the origin point of Stream #2. The mapped and field-observed karst features are displayed on **Exhibit 4**.

Monroe County Ordinance, Chapter 829: Karst and Sinkhole Development Standards contains detailed requirements regarding sinkhole evaluations and sinkhole conservation areas (SCAs). Five karst easements are already mapped and recorded for the Site (**Exhibit 4**). Three karst features

identified by IndianaMap and four potential karst features identified during field investigations are located outside the existing conservancy and karst easements at the Site. As such, VET recommends establishing SCAs pursuant to Monroe County Ordinance 829-3(C) for the remaining sinkholes and performing a formal sinkhole evaluation in accordance with Monroe County Ordinance 829-4(A). Additionally, VET recommends having an environmental professional on-call for consultation during grading and construction in the event that additional karst features are identified.

6.0 RESULTS AND CONCLUSIONS

VET performed a wetlands and jurisdictional waters delineation at the Site to delineate the potential wetlands and jurisdictional waters identified during the 2022 Phase I ESA and Site Reconnaissance. Based on field investigations, VET identified six regulated wetlands comprising 0.903 acres and 25 jurisdictional streams comprising 7,021 linear feet at the Site. Approximately 0.858 acres of the regulated wetlands are located outside the boundaries of existing conservancy and karst easements at the Site. Approximately 1,569 linear feet of jurisdictional waters are located outside the boundaries of existing conservancy and karst easements at the Site.

Monroe County plans to develop the Site for municipal purposes, to include building, parking, and driveway developments. Development plans are not expected to impact the streams and wetlands delineated within the existing conservancy and karst easements at the Site. Future impacts to the wetlands and jurisdictional waters located outside of the existing conservancy and karst easements will require a CWA Section 404/401 permit.

If required, mitigation ratios for USACE regulated wetlands are typically 4:1 for forested wetlands, 3:1 for scrub/shrub wetlands, and 2:1 for emergent wetlands. Streams are generally mitigated via restoration on a foot for foot basis. Impacts to regulated features on the Site will require mitigation if the following conditions are met:

- 1) *Impacts resulting from the loss of waterways by relocation, encapsulation, or channelization of greater than 300 linear feet of ephemeral, intermittent, or perennial stream shall require mitigation; and,*
- 2) *The loss of greater than 0.10 acre of special aquatic sites (including wetlands) and/or loss of WOTUS causing more than minimal effects shall require mitigation (USACE, 2018).*

If you have any questions or concerns regarding the information contained in this report, please contact VET at (812) 822-0400.

Respectfully submitted,

Sara R. Hamidovic, MS, PE, CPESC
Principal Engineer, President/CEO

WETLAND DETERMINATION DATA FORM – Midwest Region

Project/Site: Monroe County - Fullerton Pike City/County: Bloomington/Monroe Sampling Date: 8/23/2022
 Applicant/Owner: Monroe County Board of Commissioners State: IN Sampling Point: DP-1
 Investigator(s): Sara Hamidovic and Evan Owings Section, Township, Range: S18 T8N R1W
 Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave
 Slope (%): 0.915% Lat: 39°7'37.8228" Long: -86°34'18.0948" Datum: North American 1983
 Soil Map Unit Name: CrC, Crider Silt Loam NWI or WWI classification: Not applicable

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No _____ (If no, explain in Remarks.)
 Are Vegetation _____, Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No _____
 Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____ Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____ Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No _____
Remarks: Soil and hydrology are significantly disturbed due to topsoil removal associated with I-69 project and construction of storm water control measures in immediate area of DP-1 and DP-2.	

VEGETATION – Use scientific names of plants.

WETLAND DETERMINATION DATA FORM – Midwest Region

Project/Site: Monroe County - Fullerton Pike City/County: Bloomington/Monroe Sampling Date: 8/24/2022
 Applicant/Owner: Monroe County Board of Commissioners State: IN Sampling Point: DP-9
 Investigator(s): Sara Hamidovic and Evan Owings Section, Township, Range: S18 T8N R1W
 Landform (hillslope, terrace, etc.): Plain Local relief (concave, convex, none): Concave
 Slope (%): 6.105135% Lat: 39°7'23.7792" Long: -86°34'12.3096" Datum: North American 1983
 Soil Map Unit Name: CaD, Caneyville Silt Loam NWI or WWI classification: Not applicable

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Remarks: Soil and hydrology are significantly disturbed due to topsoil removal associated with I-69 project and construction of storm water control measures in immediate area of DP-8 and DP-9.	

VEGETATION – Use scientific names of plants.

ENVIRONMENTAL ENGINEERING, LLC

Daily Work Report

Client: Monroe County Date: 8-22-2022
Location: Fullerton Pike Project No.: 22-48
Work Description: Waterway Delineation
VET Personnel: Evan Gwings, Sara Hamidovic
Contractors: N/A
Safety Precautions: See HASP
Weather Conditions: 83° Sunny
Arrived at Site: 0915 Left Site: 1505

Sampling & Testing Locations & Methods: Proceeded to all mapped topo-graphic lows; walked stream beds to identify any brand tributaries; mapped all waterway blnds to improve map accuracy; identified points in each waterway with presence of bed/bank & OTWH to determine limits of jurisdiction of USACE.

Visitors (title, company, purpose): N/A

Principal Work Performed: Define jurisdictional waterways on Subject Property. Plat jurisdictional waterways for mapping.

Dropped off & picked up Truck #12 at Belle Tire for tire replacement.

Incident Report or Significant Observations: Identified locations with both jurisdictional waters component and karst component; presence of both springs and sinking streams.

Hours on Site: 5 hours 50 minutes

On-Site Supervisor: Sara R. Hamidovic PE

Mr. Jeff Cockerill – Attorney
Monroe County Board of Commissioners
100 West Kirkwood Avenue
Bloomington, Indiana 47404

**RE: Phase II Environmental Assessment
South State Road 37 and West Fullerton Pike
Bloomington, Indiana 47403**

Dear Mr. Cockerill:

VET Environmental Engineering, LLC (VET) conducted a Phase II Environmental Assessment (PII-2022) at the property located at South State Road 37 and West Fullerton Pike, Bloomington, Indiana (Site) on behalf of the Monroe County Board of Commissioners (Monroe County). The PII-2022 was conducted in accordance with the scope of work detailed in VET's proposal dated August 10, 2022.

The objective of the PII-2022 was to assess the presence or absence of on-Site contamination associated with the Recognized Environmental Condition (REC) identified in a Phase I Environmental Site Assessment (ESA, PI-2022) prepared by VET and dated August 10, 2022.

1.0 SITE BACKGROUND

The Site is currently vacant. The eastern and northern Site boundaries are lined with forested land. The central portion of the Site is an open grassy field. A large pile of fill material is located on the northern portion of the Site. A review of aerial photography indicates that the Site was most recently utilized as a staging area for equipment during the construction of Interstate 69. Access to the Site is provided by an unpaved access road via West Fullerton Pike. The Site is equipped with electrical, water, and sanitary sewer services, according to Monroe County Geographic Information System (GIS) records. The City of Bloomington Utilities Department (CBU) provides drinking water for the Site and surrounding area. CBU obtains water from Monroe Reservoir, commonly known as Lake Monroe, located southeast of Bloomington. Water wells mapped within a quarter mile of the Site may be associated with the adjacent quarry operations or private water supplies for residences. The Site will be connected to the CBU public water supply. As such, groundwater is not expected to be utilized for drinking water at the Site.

In August 2022, VET conducted the PI-2022 at the Site in accordance with the *ASTM Standard Practice for Environmental Site Assessments: Phase I ESA Process (Designation: E1527-21)* pursuant to a potential development of the Site. The PI-2022 identified the following REC in connection with the Site:

- *“VET observed evidence of grading and deposition of fill material on the [Site]. The grading is reportedly a result of the construction of a road foundation that occurred around the year 2015. Additionally, topsoil was reportedly stripped from the [Site] and sold around the year 2015. Although the grading and filling may be attributed to the construction of the road foundation or excavation of topsoil from the [Site], the origin and contents of the potential fill material on the northern [Site] boundary is unknown and as such constitutes an REC.”*

2.0 PHASE II INVESTIGATIVE ACTIVITIES

VET was retained by Monroe County to conduct a PII Environmental Assessment (PII-2022) to address the REC identified by the PI-2022. VET personnel reviewed a Site-specific Health and Safety Plan (HASP) prior to commencing field work (**Attachment 3**). Utilities were located by US Infrastructure Company (USIC) personnel prior to commencement of PII-2022 activities. No damage to utility infrastructure took place during work at the Site. VET representatives Ms. Sara Hamidovic, MS, PE, CHMM, CPESC, Mr. Evan Owings, and Mr. Blake Kalakay conducted PII-2022 activities at the Site on August 29, 2022. Select photographs taken during field investigations are included as **Attachment 1**.

2.1 Soil Boring Installation

VET and personnel with Strata Environmental Contractors, LLC (Strata), the drilling subcontractor, advanced six soil borings at the Site on August 29, 2022 utilizing a track-mounted Geoprobe® 7822DT direct push technology (DPT) drill rig. Soil borings B-1, B-2, B-3, B-4, B-5, and B-6 were advanced to depths of 24 feet below ground surface (bgs), 27 feet bgs, 23.5 feet bgs, 22 feet bgs, 25 feet bgs, and 32 feet bgs, respectively.

Soils were visualized and logged by Sara R. Hamidovic, MS, PE, CHMM, CPESC. Soil samples collected during field sampling activities were classified in the field in accordance with the U.S. Department of Agriculture (USDA) soil classification system. Soil boring logs with soil classification, color (identified with Munsell Color Chart), moisture, and other observations are included in **Attachment 2**.

Sample locations within each boring were selected as a suspected worst-case scenario based upon a combination of visual, olfactory, and headspace screening observations. Headspace screening was conducted by exposing fresh surfaces from soils within the acetate liner and then removing and placing soils from the sample interval into plastic Ziplock bags. Ziplock bags were sealed, labeled by appropriate depth interval, and given at least two minutes to equilibrate prior to conducting headspace screening with a photoionization detector (PID) and a portable flame ionization detector (FID). Headspace screening results are recorded on soil boring logs (**Attachment 2**).

Based on the RECs identified in the PI-2022, soil borings were advanced to evaluate for the presence or absence of problematic conditions resulting from cutting, filling, and grading activities at the Site. Based on data sources reviewed during the PI-2022, VET believes that topsoil was removed and transported off-Site and clay fill was subsequently imported on-Site. Soil boring locations were selected to provide soil, and if possible groundwater, data representative of the Site. Soil boring B-1 was advanced on

the fill pile located on the northern portion of the Site. B-1 was designed as an evaluation point to determine the presence or absence of contamination associated with the fill material deposited on-Site as there is uncertainty with regard to the origins, content, and environmental status of the fill material. A duplicate sample (DUP-1) was collected at B-1 for quality assurance and quality control (QA/QC) purposes.

Soil borings B-2 through B-6 were advanced in the grassy field, inside the perimeter of the Site's tree line. Soil boring B-2 was advanced in the far northwestern corner of the Site. The northwestern corner is relatively flat and represents a local high. Based on data sources reviewed during the PI-2022 (aerial photography, interviews), VET believes that soils on the northwestern portion of the Site were modified through cutting and/or grading activities. B-2 was designed to evaluate the northwestern portion of the Site for the presence or absence of contamination from cutting and filling activities and to evaluate for any on-Site migration of contamination from properties located to the north and west of the Site.

B-3 was advanced approximately 800 feet southeast of B-2. The location of B-3 is a surficial low point compared to the surrounding topography. This location drains approximately the west-central third of the grassy area of the Site. Surface topography in this area of Indiana generally mirrors the topography of the underlying bedrock, suggesting flow direction of both surface water and groundwater on the west-central third of the Site are directed toward B-3. VET identified a 0.277-acre wetland directly west of B-3. The presence of a topographic low coupled with adequate surface hydrology to support a wetland indicate likely presence of groundwater at this location. VET designed B-3 as an evaluation point to assess for the presence or absence of contamination, in both soil and groundwater, for the west-central portion of the grassy area on the Site.

Soil boring B-4 was advanced approximately 610 feet east of B-3, adjacent to the existing tree line. Similar to B-3, B-4 is located in a local topographic low on the Site. A swale is located directly east of B-4 and a berm is located directly east of the swale running parallel to the tree line. Surface water from the east-central section of the Site enters the swale and travels both north and south toward the outlet structure through the berm located immediately northeast of B-4. VET identified a 0.076-acre wetland directly to the north and east of B-4. VET identified a second wetland, 0.027-acres in area, to the southeast of B-4. The presence of a topographic low coupled with adequate surface hydrology to support a wetland indicate likely presence of groundwater at this location. VET designed B-4 as an evaluation point to assess for the presence or absence of contamination, in both soil and groundwater, for this portion of the Site.

B-5 was advanced 930 feet southwest of B-4. A matrix spike/matrix spike duplicate sample was collected at B-5 for QA/QC purposes. Aerial photography suggests that this area of the Site was subjected to modifications through cutting and grading activities. Additionally, B-5 is located at the top of a steep hill that travels downgradient from west to east and eventually off-Site. VET designed B-5 as an evaluation point to assess for the presence or absence of contamination associated with suspected cutting and grading activities at the Site and to assess for off-Site migration of contamination.

Soil boring B-6 was advanced in the Site's southwestern corner, approximately 610 feet southwest of B-5. Aerial photography and topography suggest that this area was modified through cutting and filling activities. Additionally, the Site was most recently utilized as a staging area associated with the Interstate 69 development. B-6 is located on the southwestern portion of the Site, directly north of the Site's entrance on Fullerton Pike and directly east of Interstate 69. The southwestern portion of the Site area was likely highly trafficked and utilized by heavy equipment during the Interstate 69 highway development project. B-6 was designed as an evaluation point to assess for the presence or absence of contamination associated with cutting and grading activities along with impacts associated with the development of Interstate 69.

2.2 Temporary Well Installation

Two temporary monitoring wells were installed at the Site (MW-1 and MW-2). The temporary wells were co-located with soil borings B-3 and B-4, respectively. Temporary wells were constructed by installing clean, 0.1-inch slotted polyvinyl chloride (PVC) screens, and 1-inch PVC riser pipes to the base of the soil borings. Ten-foot screen lengths were selected and installed at MW-1 and MW-2.

The location of MW-1 is a surficial low point compared to the surrounding topography. This location drains approximately the west-central third of the grassy area on the Site. Surface topography in this area of Indiana generally mirrors the topography of the underlying bedrock, suggesting flow direction of both surface water and groundwater on the west-central third of the Site are directed toward MW-1. VET identified a 0.277-acre wetland directly west of MW-1. The presence of a topographic low coupled with adequate surface hydrology to support a wetland indicate likely presence of groundwater at this location.

Similar to MW-1, MW-2 is located in a local, topographic low on the Site. A swale is located directly east of MW-2 and a berm is located directly east of the swale running parallel to the tree line. Surface water from the east-central section of the Site enters the swale and travels both north and south toward the outlet structure through the berm located immediately northeast of MW-2. VET identified a 0.076-acre wetland directly to the north and east of MW-2. VET identified a second wetland, 0.027-acres in area, to the southeast of MW-2. The presence of a topographic low coupled with adequate surface hydrology to support a wetland indicate likely presence of groundwater at this location.

Temporary monitoring wells (piezometers) were allowed to stabilize for approximately five minutes prior to attempting sample collection to minimize groundwater sample turbidity and to allow groundwater to equilibrate. No groundwater was encountered at either boring location at the time of installation. VET left the piezometers in place during the remainder of investigative activities. VET utilized a water level meter intermittently throughout investigative activities to measure the depth to groundwater at MW-1 and MW-2. However, no groundwater was encountered at either boring location during investigative activities. Temporary wells were abandoned by extracting the PVC risers and slotted well screens and pouring bentonite chips into the soil boring cavities to the ground surface.

2.3 Sample Management

VET conducted soil sampling at the Site on August 29, 2022. VET collected a total of six soil samples, one duplicate sample, and one MS/MSD sample for QA/QC purposes. VOC samples were collected first to minimize the loss of VOCs to the atmosphere through volatilization. Surface soil samples were collected utilizing Method 5035 for VOCs and traditional methodology for the balance of the parameters. Method 5035 samples were collected by advancing 5g Terra Core samplers directly into the soil to be sampled and placing individual aliquots directly into laboratory-supplied (one Methanol preserved and two unpreserved) 40mL vials.

Soil jars (moisture and balance of parameters) were filled by placing the soil directly into laboratory-supplied, certified clean, glass soil jars. VET used new, dedicated disposable equipment for all samples collected. New nitrile gloves were donned for each sample. Non-dedicated equipment was decontaminated between samples utilizing an Alconox detergent and tap water rinse in a stainless-steel wash bucket. All disposable equipment was discarded at the completion of each sampling point and replaced with fresh equipment.

Soil samples were subsequently packed in iced coolers and shipped via FedEx to Test America Laboratories in University Park, Illinois under strict chain of custody documentation. Soil samples were

analyzed for the following constituent groups under each respective method of analysis utilizing gas chromatography-mass spectrometry (GC/MS) laboratory equipment:

TABLE A. SOIL ANALYTICAL PARAMETERS		
Parameter	Abbreviation	Method
Volatile Organic Compounds	VOCs	USEPA 8260B
Polycyclic Aromatic Hydrocarbons	PAHs	USEPA 8270E
Resource Conservation & Recovery Act Metals	RCRA 8 Metals	USEPA 6010B
Mercury	Mercury	USEPA 7471B
Polychlorinated Biphenyls	PCBs	USEPA 8082A

3.0 ANALYTICAL RESULTS

Soil laboratory analytical results are tabulated in **Table 1**. The Level II analytical report is included in **Attachment 4**. The Level IV QA/QC report is included in **Attachment 4** of the electronic file. Analytical results are compared to 2022 Indiana Department of Environmental Management (IDEM) Remediation Closure Guide (RCG) Screening Levels (SLs). There are instances in the laboratory analytical results where constituents were not detected, but the laboratory reporting limit exceeded applicable SLs. This phenomenon is known to the agency and is common in the environmental field. It is VET's professional opinion that IDEM will not request additional analysis to reconcile this discrepancy.

3.1 Soil Boring Lithology

Soil borings were terminated at depths ranging from 22 to 32 feet bgs. Soil boring B-1 was advanced on the northern portion of the Site on the pile of fill material. B-1 was terminated at the native soil material at 22 feet bgs. Soil borings B-2 through B-5 were terminated on the limestone bedrock surface. B-6 was terminated at 32 feet bgs and did not reach bedrock. There were no visual or olfactory signs of contamination at any boring location. Yellowish brown silty loam material was encountered within the first two feet at all boring locations except for B-4. Silty clay and/or clay material was present at all boring locations below two feet bgs. Groundwater was not encountered at any boring location. Lithologic descriptions are included within soil boring logs (**Attachment 2**).

3.2 Soil Analytical Results

Soil samples B-1 and DUP-1 exhibited detections for VOCs, but no detections exceeded IDEM RCG SLs. B-2 through B-6 did not exhibit detections for VOCs. No soil samples exhibited detections for PAHs or PCBs.

RCRA 8 Metals were detected in all soil samples. Arsenic was the only analyte that exhibited detections above IDEM RCG SLs. Arsenic exceeded the Residential Migration to Groundwater (MTG) SL at B-1, DUP-1, and B-5 at concentrations of 6.8 milligrams per kilogram (mg/kg), 6.7 mg/kg, and 6.8 mg/kg, respectively. Soil analytical results are tabulated in **Table 1** and displayed graphically on **Exhibit 4**.

4.0 DISCUSSION

The IDEM RCG is IDEM's system for describing selected approaches to investigation and risk-based closure of contaminated or potentially contaminated sites as prescribed in Indiana Code (IC) 13-12-3-2 and IC 13-25-5-8.5 (IDEM, 2012). The Site is the proposed location of a new municipal development project associated with the Monroe County Justice Department. The Site will include both commercial and residential land use components. Groundwater will not be utilized for drinking water at the Site. It is VET's professional opinion that the soil direct contact exposure scenario and a residential context are the most applicable of readily available screening criteria.

4.1 Soil

Arsenic was the only analyte that exceeded IDEM RCG SLs. Arsenic occurs naturally in southern Indiana soils, and specifically Bloomington soils, at levels that often exceed the most conservative IDEM RCG SLs. This condition is the subject of discussion at the agency and among consultants operating in southern Indiana. It is VET's opinion, based on experience and published documentation, that ubiquitous presence of arsenic on a property in southern Indiana coupled with concentrations in soils up to 15 mg/kg is likely attributable to a naturally occurring condition. This does not, however, discount relevance of the SLs published by IDEM, nor does it suggest that naturally occurring arsenic poses any less risk than that from an anthropogenic source. The argument that arsenic contamination is naturally occurring serves to communicate challenges with regard to remedy selection and implementation due to its widespread nature. All samples exhibited concentrations of arsenic below 15 mg/kg. As such, the detections of arsenic in samples collected at the Site are consistent with background arsenic concentrations in southern Indiana soils (Dragun, 2005).

There are four wells mapped within one quarter mile of the Site. One well is mapped to the northeast of the Site. However, the well log states that the well is actually located two miles south of State Road 446. This suggests that the location of the well is mapped incorrectly, and the well is located more than one quarter mile away from the Site. The remaining three wells are located to the southeast of the Site, across West Fullerton Pike. These wells may be associated with residential properties located south of the Site. There is a significant hydrologic and topographic break between the residential properties and the Site. The Site's southern boundary, adjacent to West Fullerton Pike, represents a local high on the Site. The Site topography slopes downgradient from the entrance to the north and east, away from the residential properties, and toward mapped streams on the Site. Surface topography in this area of Indiana generally mirrors the topography of the underlying bedrock, suggesting that groundwater flow direction is likely to the north and east, toward the mapped streams on-Site and away from the residential properties. This indicates that migration of contamination through groundwater from the Site to the residential properties is unlikely. Additionally, arsenic concentrations found at the Site are consistent with background arsenic concentrations for southern Indiana soils. Arsenic concentrations at the Site are notably lower than concentrations typically found in southern Indiana in VET's experience. As such, further investigation and/or remedial measures for soil at the Site are not warranted.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The objective of the PII-2022 was to assess the presence or absence of on-Site contamination associated with the REC identified in the PI-2022 prepared by VET and dated August 10, 2022. Field

screening results were used to guide sample selection at each boring location. Sample locations were placed in what VET believes to be representative of Site conditions, to the extent possible, and to identify the presence or absence of contamination resulting from cutting, filling, and grading activities at the Site and the Site's use as a staging area associated with Interstate 69 development.

Soil samples collected from fill material on-Site (B-1 and DUP-1) exhibited detections for VOCs below applicable SLs. No other soil samples (B-2 through B-6) collected during investigative activities exhibited detections for VOCs. These analytical results suggest that fill material likely originated off-Site. The PII-2022 was not exhaustive and was designed to determine the presence or absence of contamination associated with the REC identified in the PI-2022. Due to the limited nature of the investigation, VET cannot warranty that all fill material on-Site will exhibit analytical results consistent with B-1. Approval may be necessary if soils are transported off-Site for disposal or reuse. Approval for disposal or reuse may require additional analytical testing. VET did not observe visual or olfactory signs of contamination during investigative activities. However, if any visual or olfactory signs of contamination are observed during development activities, additional investigation may be warranted.

VET's samples were biased toward areas with the highest potential for contamination as indicated by field screening instrumentation and visual inspection. Analytical results were consistent with background concentrations for the area or did not exceed applicable SLs; further investigation and remedial measures are not warranted at this time.

VET appreciates the opportunity to provide environmental consulting services for Monroe County. If you have any questions or concerns regarding this report, please do not hesitate to contact VET at (812) 822-0400.

Respectfully submitted,

Sara R. Hamidovic, MS, PE, CHMM, CPESC
Principal Engineer, President/CEO

ENVIRONMENTAL ENGINEERING, LLC

Daily Work Report

Client: Monroe County Date: 8-29-22
Location: Fulerton Pike Project No.: 22-51
Work Description: ESA Phase II Core drilling / Sample Collection
Contractors: Strata Environmental Contractors, LLC
Weather Conditions: 85° Sunny
Arrived at Site: 0748 Left Site: 15:48

Sampling & Testing Locations & Methods: B-1 drilled to depth of 24', did not hit water. Soil Samples taken at 6'-8' for B-1. Dup-1 samples taken at this location at a depth of 8'-10'.
B-2 drilled to a depth of 27', did not hit water. Samples taken at a depth of 2'-4'.
B-3 drilled to 23.5', hit bedrock, no water initially, samples taken at 22'-23.5'
B-4 drilled to 22' hit bedrock, no water initially, samples taken at 20'-22'

Visitors (title, company, purpose): Utility locator from Northern Lights stopped to tell us the location of fiber optic cables on property.

Principal Work Performed: Geoprobe boring to refusal with exception of B-1 located on top of fill pile. Soil Samples for VOCs, PCBs, PAHs + Metals collected at each site boring location. Water samples were not taken due to lack of water at drilling locations

Incident Report or Significant Observations: Geoprobe overheated @ 1330. Drilling started again at 1340. No groundwater was found during drilling. Therefore water samples could not be taken.

Hours on Site: 8

Page 1 of 2

On-Site Supervisor: Sara R. Haidoor, PE

piezometers left in place at B-3 + B-4
 B-5 drilled to depth 25'. samples taken at 8'-10' primary, 10'-12' MS,
 6'-8' MSD. Soil from 12'-14' was used to top off MSD samples.

Piezometers in B-3 + B-4 were checked for water at 1500. No water detected

Trucks Piezometers were removed

20			100	Silty Clay	5Y 6/1 (gray) silty clay with 10YR 6/8 (brownish yellow) iron concentrations in matrix with 10YR 5/1 (gray) weathered limestone at base; boring terminated on limestone bedrock	0.0	2.7	
22								

Notes: Northing: 4330970.25, Easting: 537253.65. Soil sample (B-4 (20'-22') (VOCs, PAHs, PCBs, RCRA 8 Metals)) at 1218.
 Bedrock refusal at 22' BGS. Installed piezometer at this location with 10' PVC slotted screen. Total measured piezometer depth = 22.2' BGS.
 Insufficient water for groundwater sample collection. Piezometer abandoned and restored with bentonite chips to grade.
 Termination on limestone bedrock. TDD = 22'. No visual or olfactory signs of contamination.

APPENDIX D: TRAINING RECORD

1.0 INTRODUCTION

Activities on sites where hazardous waste or constituents may be present must meet the requirements of a site-specific Health and Safety Plan (HASP) prepared in accordance with the Occupational Safety and Health Administration (OSHA) standards, 29 CFR 1910.120 and 29 CFR 1926.65 (HAZWOPER). The purpose of this HASP is to comply with the provisions of the OSHA General Industry and Construction Industry standards, and to define the requirements and designate protocols to be followed for investigative activities at South State Road 37 and West Fullerton Pike, Bloomington, Indiana (Site). The procedures and guidelines herein were based on the best available information at the time of HASP preparation. Specific requirements will be revised when new information is received or when Site conditions change. It is the responsibility of all field team members to evaluate the work conditions of the Site and request assistance from the Site Safety Officer (SSO) if safety protocols are unclear. Compliance with this plan is mandatory for all on-Site personnel.

Site personnel will be informed by the SSO of the Site emergency response procedures and any potential fire, explosion, health, or safety hazards to this operation. If an unsafe or hazardous condition is observed by the SSO or by the Indiana Department of Environmental Management (IDEM) during a Site inspection, work activities will be suspended immediately until the situation is corrected and/or the appropriate safety equipment is obtained to complete the work properly.

2.0 HEALTH AND SAFETY TRAINING

OSHA requires that personnel who will operate in hazardous work areas be trained according to the requirements of 29 CFR 1910.120 and 29 CFR 1926.65. This project is considered to be a hazardous work area. All personnel (including visitors) entering hazardous work areas will be required to have at least 40 hours of hazardous waste operations health and safety training (HAZWOPER) and appropriate 8-hour refresher training (HAZWOPER Refresher) in accordance with OSHA regulations outlined in 29 CFR 1910.120. Training documentation for VET Environmental Engineering, LLC (VET) personnel is on file at the VET office located at 2335 West Fountain Drive, Bloomington, Indiana 47404.

3.0 MEDICAL MONITORING

Medical surveillance will not be performed.

4.0 KEY PERSONNEL AND PROJECT TEAM

TABLE A. KEY PERSONNEL		
Team Member	Responsibility	Telephone Number
VET Environmental Engineering, LLC	Consultant and Prime Contractor	(812) 822-0400
Sara Hamidovic, MS, PE, CHMM, CPESC	Site Safety Office and Principal Engineer	(812) 327-2838
Evan Owings	Project Manager	(513) 550-2667

5.0 SITE CHARACTERISTICS AND BACKGROUND

The Site is currently vacant. A review of aerial photography indicates that the Site may have most recently been utilized as a staging area for equipment during the construction of Interstate 69. The Site is the proposed location of a new municipal development project for Monroe County, Indiana. This HASP is for soil and groundwater investigations at the Site. The purpose of the investigation is to determine the presence or absence of contamination on-Site associated with the potential fill material observed on the Site's northern boundary.

6.0 SCOPE OF PROJECT

VET subcontracted Strata Environmental Contractors, LLC (Strata) to advance six subsurface soil borings utilizing Geoprobe direct push technology. VET will conduct subsurface soil sampling to identify the presence or absence of problematic conditions resulting from potential impacts associated with observed fill material on-Site. Soil boring sample locations will be located and mapped utilizing a Trimble Geo7X GPS unit.

Soil samples collected will be field classified according to the USDA classification system. Field logs will be prepared detailing the presence of fill, soil classification, color (identified with Munsell Chart), moisture, texture, and conditions including the presence of petroleum staining and atypical odors. VET personnel will conduct field screening of media collected from each boring utilizing a photoionization detector (PID) and portable flame ionization detector (FID). Elevated PID and/or FID readings may indicate the presence of impacted soils and will guide selection of the depth interval to be sampled for analytical testing.

Soil samples will be submitted for laboratory analysis of volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and Resource Conservation and Recovery Act (RCRA) 8 Metals, and polychlorinated biphenyls (PCBs). All samples will be transported to the Eurofins Test America Laboratory in University Park, Illinois for analysis.

Temporary monitoring wells will be installed, and groundwater sample collection attempted at three soil boring locations. A groundwater sampling event will be conducted to determine both groundwater flow direction and presence or absence of contamination at the selected locations. Groundwater samples will be submitted for laboratory analysis of VOCs, PAHs, PCBs, and RCRA 8 Metals. Samples for RCRA 8 Metals will be sampled as one field filtered and one unfiltered sample to reduce generation of false positive results. Elevated concentrations of metals are often reported when collecting samples from temporary monitoring wells due to presence of large quantities of suspended sediment. The filtered sample will serve to eliminate uncertainty with regard to suspended metals and provide a more definitive concentration of dissolved metals. All samples will be transported to the Eurofins Test America Laboratory in University Park, Illinois for analysis.

7.0 HAZARD EVALUATION

7.1 Physical Hazards

Investigative activities require field personnel to conduct sampling activities in the vicinity of heavy machinery and physical hazards are anticipated. Physical hazards anticipated at the Site include: heavy equipment operations, impact and eye injury hazards; inclement weather; slip, trip and fall hazards; heat stress; vehicle traffic; and elevated noise level hazards. Allowing only trained and qualified individuals to enter the work zones will minimize exposure to these physical hazards. Safe work practices, in compliance with this document and applicable OSHA standards, are required at all times. **Appendix A** details the anticipated physical hazards and applicable control measures for each identified hazard.

7.2 Chemical Hazards

Chemical hazards associated with sample collection for analysis of VOCs, PAHs, RCRA 8 Metals, and PCBs are anticipated. **Appendix B** includes the uses, target organs, and potential health effects associated with the chemical hazards anticipated on-Site.

8.0 PERSONAL PROTECTIVE EQUIPMENT (PPE)

8.1 Levels of Protection

The level of protection required for each job task associated with the project is detailed in **Table B**. Level C and Level D are the most common levels of protection required for investigations conducted by VET. Level D requires (a) normal work clothes or coveralls; (b) Tyvek coveralls (as needed for protection from soiling); (c) steel toed work boots; (d) hard hat (as needed); (e) hearing protection (as needed); and (f) safety glasses or goggles (as needed). Level C requires all PPE needed for Level D protection in addition to (a) latex inner gloves; (b) outer boots or boot covers (latex); (c) outer gloves (Nitrile); and (c) NIOSH certified full-face or half face air purifying respirator with Organic Vapor/High Efficiency Particulate filter cartridges.

TABLE B. REQUIRED LEVEL OF PROTECTION	
Job Task	Level of Protection
Drilling Activities	D
Soil Sampling	D
Groundwater Sampling	D

Changes to the specified levels of protection shall be at the direction of the SSO. The level of personal protection provided by the personal protective equipment (PPE) selection shall be upgraded or downgraded based upon a change in Site conditions or investigative findings. Other indicators of the need for reassessment include (a) commencement of a new work phase; (b) change in job tasks during a work phase; (c) change of season or weather; (d) contaminants other than those previously identified are

encountered; (e) change in ambient levels of contaminants; and (f) change in work scope that affects the degree of contact with contaminants.

8.2 Air Monitoring

Air monitoring will be not conducted during this project.

9.0 FIRST AID

Immediate first aid actions are recommended in the event exposure to contamination occurs through the eyes, skin, respiratory tract (mouth, nose, and/or throat), and/or through ingestion. VET personnel will maintain a National Institute for Occupational Safety and Health (NIOSH) Pocket Guide to Chemical Hazards (Pocket Guide) on-Site at all times. The Pocket Guide includes recommended first aid actions for specific chemicals and/or substances commonly found in industrial settings. Field personnel shall refer to the Pocket Guide in the event that contamination exposure occurs and carry out the recommended first aid actions.

10.0 EMERGENCY INFORMATION

10.1 Hospital Information

The nearest hospital is the Indiana University (IU) Health Bloomington Hospital located at 2651 East Discovery Parkway, Bloomington, Indiana. A map and driving directions to the hospital are included as **Appendix C**.

10.2 Emergency Contacts

The applicable emergency contacts for the project are listed in **Table C**.

TABLE C. EMERGENCY CONTACTS	
Contact	Telephone Number
Nearest telephone	On-Site; VET personnel cell phone (812) 327-2838
Ambulance	911
Poison control center	(800) 222-1222
Police	911
Fire	911
IDEM Spill Hotline	(888) 233-7745

11.0 HAZARD COMMUNICATION TAILGATE MEETING

A hazard communication tailgate meeting will be performed before work activities at the Site. All employees will be briefed of the specified hazards associated with the Site. Employees will be briefed on

general safety items including (a) use of the “buddy system” at all times when in the work zone; (b) avoid contact with potentially contaminated surfaces; (c) walk around and not through puddles or discolored soil areas; (d) eating, drinking, and smoking are prohibited in the work zones; and (e) Site personnel must not modify the PPE indicated in this HASP without prior approval from the SSO.

12.0 HASP REVIEW AND MODIFICATION

This HASP is a living document. It is intended to reflect the anticipated Site conditions during the investigation. All Site personnel will read this HASP, will be briefed by the SSO on its contents, and will be familiar with its provisions. Each person signing the HASP Training Record (**Appendix D**) certifies understanding of this HASP and its requirements.

**APPENDIX A. PHYSICAL HAZARDS
HEALTH AND SAFETY PLAN**

Hazard Description	Potential Result	Control Measure
Heavy equipment operations	<ul style="list-style-type: none"> ○ Impact or crushing injury ○ Head and foot injuries from dropped materials ○ Eye injuries from flying objects 	<ul style="list-style-type: none"> ○ Nonessential workers must stay 20 feet beyond equipment moving areas ○ Operator to wear Level D PPE and seat belt ○ Ensure proper operation of backup alarm and inspect for hydraulic oil leaks ○ Remove defective equipment from service ○ Wear hard hat and steel toe boots, wear safety glasses
Hot ambient temperatures	<ul style="list-style-type: none"> ○ Heat Stress or Heat Stroke 	<ul style="list-style-type: none"> ○ Monitor conditions of workers, consume replacement fluids, consume food, take breaks, seek medical assistance in event of suspected heat stress or heat stroke
Excessive noise levels	<ul style="list-style-type: none"> ○ Hearing loss from equipment operations 	<ul style="list-style-type: none"> ○ Wear proper hearing protection
Slip, trip, fall hazards	<ul style="list-style-type: none"> ○ Impact/crushing injuries 	<ul style="list-style-type: none"> ○ Maintain neat work area, remove identified hazards
Potential biological hazard exposure (blood, bodily fluids)	<ul style="list-style-type: none"> ○ Potentially contract HBV, HIV 	<ul style="list-style-type: none"> ○ Use First Responder Bloodborne Pathogen Spill Kit if required to render Good Samaritan first aid or decontaminate surfaces or equipment ○ Use safe practices to prevent cuts
Stinging and biting insects and/or animals	<ul style="list-style-type: none"> ○ Potentially contract diseases carried insects and animals ○ Welts, cuts, scratches, bites ○ Allergic reaction or fever 	<ul style="list-style-type: none"> ○ Apply bug spray prior to field work and reapply as needed throughout the day ○ Avoid insect and animal habitat (ant hills, thick vegetation, standing water, bee/wasp nests) when possible ○ Check for stings, bites, and/or allergic reactions subsequent to field work
Broken utility line	<ul style="list-style-type: none"> ○ Fire, explosion, electrocution, shock 	<ul style="list-style-type: none"> ○ Contact utility location service and inspect locations for subsurface lines before digging ○ Stop work immediately if a utility is encountered ○ Hand dig within 2 feet of known or suspected subsurface utility line until location is verified ○ Monitor LEL at surface of excavation and stop work if LEL is greater than or equal to 10%
Vehicular traffic	<ul style="list-style-type: none"> ○ Severe impact and crushing injuries, possible death 	<ul style="list-style-type: none"> ○ Be aware of traffic movement patterns ○ Use spotter and flagman when moving drill rig or directing equipment and trucks out of work Site ○ Wear reflective safety vests

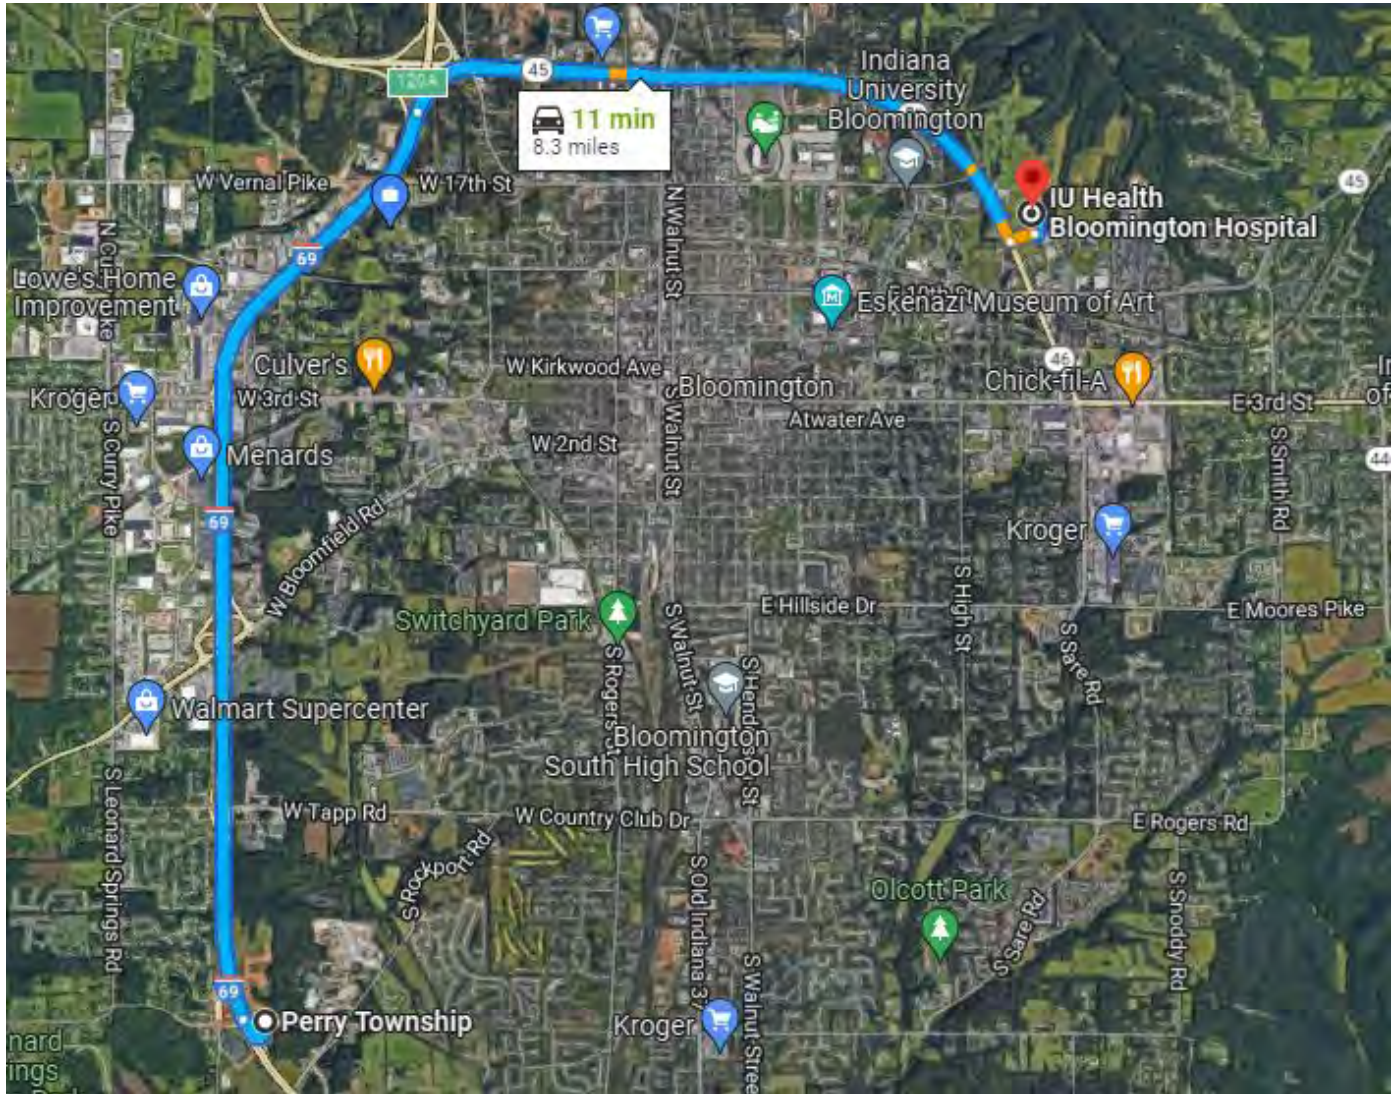

**APPENDIX B. CHEMICAL HAZARDS
HEALTH AND SAFETY PLAN**

Hazardous Substance or Chemical Group	Uses	Target Organs	Potential Health Effects
Polycyclic aromatic hydrocarbons (PAHs)	Agricultural burning, asphalt, insecticides, fungicides, pesticides, burning coal, oil, gasoline, trash, tobacco, wood, and other organic materials, medicines, dyes, plastics	Respiratory System, Central Nervous System, Blood, Liver, and Eyes	Eye irritation, respiratory tract irritation, convulsions, unconsciousness, death, blood and liver abnormalities, suspected carcinogens
Volatile organic compounds (VOCs)	Fuels, paints, solvents, degreasers, smoke, exhaust	Central Nervous System, Eyes, Liver, Kidneys	Eye irritation, respiratory tract irritation, nausea, headache, dizziness, suspected carcinogens
Resource Conservation and Recovery Act (RCRA) 8 Metals: Arsenic Barium Cadmium Chromium Lead (Pb) Mercury Selenium Silver	Commonly found in construction and demolition debris and waste, fossil fuels, mining, and manufacturing of various products <u>Arsenic</u> : Insecticides, algacides, glass manufacturing, herbicides, nonferrous alloys, and wood preservatives <u>Barium</u> : Oil production, fireworks, medical procedures, rat poison, glassware, ceramic glazes, rubber production, radioactive material storage containers, white pigment in some paints, magnets, fluorescent lamps, welding, and automotive ignition and brake systems <u>Cadmium</u> : Batteries, alloys for bearings, low melting alloys, solders, electroplating, picture tubes, and pigments <u>Chromium</u> : Stainless steel and other alloys, plating, catalysts, and pigments <u>Lead</u> : Piping, alloys such as pewter and solder, gasoline, paints, car batteries, electronic screens, cables, sheeting, ammunition, bearings, glassware, and sports equipment <u>Mercury</u> : Historically used in manufacturing processes, batteries, fluorescent lights, felt, thermometers, barometers, and red pigment <u>Selenium</u> : Glass and stainless-steel additives, photocells, solar cells, photocopiers, rectifiers, anti-dandruff shampoos, and pigments for ceramics, paint, and plastics <u>Silver</u> : Jewelry, silver tableware, mirrors, dental alloys, solder and brazing alloys, electrical contacts, batteries, paints, printed circuits, photography, and clothing including gloves	Bones, Brain, Central Nervous System, Intestines, Kidneys, Liver, Lungs, Respiratory System, Reproductive System, and Skin	<u>Arsenic poisoning</u> : Dizziness, headaches, hair loss, vomiting, and cancer resulting from prolonged exposure <u>Barium</u> : Vomiting, cramps, dyspnea, change in blood pressure, numbness, muscle weakness, abnormal heart rhythms, and possibly cancer <u>Cadmium</u> : Flulike symptoms and weakened bone density <u>Chromium</u> : Intestinal and respiratory issues, and cancers <u>Lead</u> : Negative effects on nervous system, cancer, rise in blood pressure, brain and kidney damage, miscarriages, declined fertility in men, hyperactivity, and impulsive behavior <u>Mercury</u> : Negative effects on nervous system, headaches, tremors, and behavioral and mental difficulties <u>Selenium</u> : Nausea, vomiting, nail discoloration, and hair brittleness, fatigue, irritability, and foul breath odor <u>Silver</u> : Argyria (discoloration of skin and other organs) and breathing problems
Polychlorinated biphenyls (PCBS)	Transformers, capacitors, electrical devices and equipment, oils, fluorescent light ballasts, cable and thermal insulation, adhesives, tapes, oil-based paints, caulking, plastics, carbonless copy paper, and floor finish	Central Nervous System, Endocrine System, Immune System, and Reproductive System	Adverse health effects to multiple complex and interrelated body systems (see target organs), known to cause cancer

**APPENDIX D. TRAINING RECORD
HEALTH AND SAFETY PLAN**

PERSONNEL ACKNOWLEDGEMENT

The Site Safety Officer (SSO) is responsible for informing all individuals entering the work zone of the contents of this Health and Safety Plan (HASP) and ensuring that each person signs the following acknowledgement form. By signing this form, individuals recognize the hazards present on the Site and the policies and procedures required to minimize exposure or adverse effects.

I have read this HASP, was briefed, and fully understand all the following aspects of the project:

1. Hazards associated with the project;
2. Personal protective equipment;
3. Emergency procedures/contacts;
4. Project team-member responsibilities; and,
5. Work zones and decontamination procedures.

Definitions/Glossary

Client: VET Environmental Engineering, LLC
Project/Site: Fullerton Pike

Job ID: 500-221506-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
V	Serial Dilution exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
500-221506-1

Comments

No additional comments.

Receipt

The samples were received on 8/30/2022 10:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.1° C, 1.9° C and 2.4° C.

GC/MS VOA

Method 8260B: Internal standard (1,4-Dioxane-d8) response was outside of acceptance limits for the following sample: B-1 (6'-8') (500-221506-1), B-2 (2'-4') (500-221506-2) and Dup-1 (500-221506-8). The sample did not have detects of requested analytes using this internal standard.

Method 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: B-1 (6'-8') (500-221506-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: B-1 (6'-8') (500-221506-1) and B-2 (2'-4') (500-221506-2).

Method 8082A: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: B-1 (6'-8') (500-221506-1) and B-2 (2'-4') (500-221506-2). 5888523 5501970 5372416

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 32039 **Lot No.:** A0161458

Description : Aroclor® 1016/1260 Mix
Aroclor® 1016/1260 Mix 1,000 µg/mL, Hexane, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : September 30, 2026 **Storage:** 25°C nominal

Handling: This product contains PCBs.

5121817
ID: ex1016/1260st_00023

Date Passed: 08-Jun-2020

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 571995 **Lot No.:** A0179662

Description : 8270 List 1 / Std #1 MegaMix (2017)
8270 List 1 / Std #1 MegaMix (2017) 500-2000 µg/mL, Methylene chloride, 5mL/ampul

Container Size : 10 mL **Pkg Amt:** > 5 mL

Expiration Date : June 30, 2023 **Storage:** 0°C or colder

Handling: Carcinogen/reproductive toxin. **Ship:** Ambient
Photosensitive. Sonicate.

Solvent: Methylene chloride
CAS # 75-09-2
Purity 99%

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 µg/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 µg/mL.

N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine.

N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

This lot was approved even though the %D for 4,6-DN-2-MP was greater than 10%.

Column:

30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)

Carrier Gas:

hydrogen-constant flow 1.8 mL/min.

Temp. Program:

80°C (hold 0.1 min.) to 330°C
@ 9.6°C/min. (hold 2.86 min.)

Inj. Temp:

250°C

Det. Temp:

340°C

Det. Type:

FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Tom Suckar - Mix Technician

Date Mixed: 16-Déc-2021 Balance: 1128360905

John Lidgett - AD Chemist

Date Passed: 31-Jan-2022

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 32010 **Lot No.:** A0174295

Description : Aroclor® 1248 Standard
Aroclor® 1248 Standard 1,000µg/mL, Hexane, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : October 31, 2027 **Storage:** 25°C nominal

Handling: This product contains PCBs. **Ship:** Ambient

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569746 **Lot No.:** A0147561

Description : PCB-1232/1262 Standard
PCB-1232/1262 Standard 1,000µg/mL, Hexane, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : June 30, 2025 **Storage:** 25°C nominal

Handling: This product contains PCBs.

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)			
1	Aroclor 1232	1,002.0 µg/mL	+/-	5.9516	µg/mL	Gravimetric
	CAS # 11141-16-5 (Lot 15665-01)		+/-	31.7706	µg/mL	Unstressed
	Purity ---%		+/-	41.4958	µg/mL	Stressed
2	Aroclor 1262	1,002.0 µg/mL	+/-	5.9516	µg/mL	Gravimetric
	CAS # 37324-23-5 (Lot 5428400)		+/-	31.7706	µg/mL	Unstressed

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 32000 **Lot No.:** A0154127
Description : Pesticide Surrogate Mix
Pesticide Surrogate Mix 200 µg/mL, Acetone, 1mL/ampul
Container Size : 2 mL **Pkg Amt:** > 1 mL
Expiration Date : January 31, 2026 **Storage:** 10°C or colder
Handling: Contains PCBs - sonicate prior to use.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Catalog No. : 567684 Lot No.: A0176256

Description : 8270 Internal Standard
8270 Internal Standard 2,000µg/mL, Methylene chloride, 5mL/ampul

Container Size : 5 mL Pkg Amt: > 5 mL

Expiration Date : September 30, 2026 Storage: 10°C or colder

Handling: Sonication required. Mix is photosensitive. Ship: Ambient

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)			
1	1,4-Dichlorobenzene-d4	2,005.0 µg/mL	+/-	11.6570	µg/mL	Gravimetric
	CAS # 3855-82-1 (Lot PR-30447)		+/-	90.3041	µg/mL	Unstressed
	Purity 99%		+/-	100.2036	µg/mL	Stressed
2	Naphthalene-d8	2,000.6 µg/mL	+/-	11.6314	µg/mL	Gravimetric
	CAS # 1146-65-2 (Lot M-1452)		+/-	90.1060	µg/mL	Unstressed
	Purity 99%		+/-	99.9837	µg/mL	Stressed
3	Acenaphthene-d10	2,005.8 µg/mL	+/-	11.6616	µg/mL	Gravimetric
	CAS # 15067-26-2 (Lot PR-30913)		+/-	90.3402	µg/mL	Unstressed
	Purity 99%		+/-	100.2436	µg/mL	Stressed
4	Phenanthrene-d10	2,003.4 µg/mL	+/-	11.6479	µg/mL	Gravimetric
	CAS # 1517-22-2 (Lot PR-29119)		+/-	90.2343	µg/mL	Unstressed
	Purity 99%		+/-	100.1261	µg/mL	Stressed
5	Chrysene-d12	2,003.3 µg/mL	+/-	11.6474	µg/mL	Gravimetric
	CAS # 1719-03-5 (Lot PR-30486)		+/-	90.2298	µg/mL	Unstressed
	Purity 99%		+/-	100.1211	µg/mL	Stressed
6	Perylene-d12	2,002.3 µg/mL	+/-	11.6415	µg/mL	Gravimetric
	CAS # 1520-96-3 (Lot PR-30020)		+/-	90.1848	µg/mL	Unstressed
	Purity 99%		+/-	100.0712	µg/mL	Stressed

Solvent: Methylene chloride
CAS # 75-09-2
Purity 99%

Column:
30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)

Carrier Gas:
hydrogen-constant pressure 10 psi.

Temp. Program:
75°C (hold 1 min.) to 330°C
@ 20°C/min. (hold 10 min.)

Inj. Temp:
250°C

Det. Temp:
330°C

Det. Type:
FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 571995 **Lot No.:** A0179662

Description : 8270 List 1 / Std #1 MegaMix (2017)
8270 List 1 / Std #1 MegaMix (2017) 500-2000 µg/mL, Methylene chloride, 5mL/ampul

Container Size : 10 mL **Pkg Amt:** > 5 mL

Expiration Date : June 30, 2023 **Storage:** 0°C or colder

Handling: Carcinogen/reproductive toxin. **Ship:** Ambient
Photosensitive. Sonicate.

Solvent:	Methylene chloride CAS # 75-09-2 Purity 99%					

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 ug/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 ug/mL.

N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine.

N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

This lot was approved even though the %D for 4,6-DN-2-MP was greater than 10%.

Column:
30m x 0.25mm x 0.25µm
Rtx-5 (cat.#10223)

Carrier Gas:
hydrogen-constant flow 1.8 mL/min.

Temp. Program:
80°C (hold 0.1 min.) to 330°C
@ 9.6°C/min. (hold 2.86 min.)

Inj. Temp:
250°C

Det. Temp:
340°C

Det. Type:
FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Tom Suckar - Mix Technician

Date Mixed: 16-Dec-2021 Balance: 1128360905

John Lidgett - AD Chemist

Date Passed: 31-Jan-2022

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 571995 **Lot No.:** A0179662

Description : 8270 List 1 / Std #1 MegaMix (2017)
8270 List 1 / Std #1 MegaMix (2017) 500-2000 µg/mL, Methylene chloride, 5mL/ampul

Container Size : 10 mL **Pkg Amt:** > 5 mL

Expiration Date : June 30, 2023 **Storage:** 0°C or colder

Handling: Carcinogen/reproductive toxin. **Ship:** Ambient
Photosensitive. Sonicate.

Solvent:	Methylene chloride CAS # 75-09-2 Purity 99%					

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 ug/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 ug/mL.

N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine.

N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

This lot was approved even though the %D for 4,6-DN-2-MP was greater than 10%.

Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569730 Lot No.: A0181121

Description : 8270 List 1 / Std #9
8270 List 1 / Std #9 2000 µg/mL, Methylene chloride, 5mL/ampul

Container Size : 10 mL Pkg Amt: > 5 mL

Expiration Date : July 31, 2023 Storage: 10°C or colder

Handling: Contains carcinogen/reproductive toxin. Ship: Ambient

CERTIFIED VALUES

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. * Restek is unable to identify a reliable and/or acceptable second source for this material - the same batch of neat material may have been used to produce both the primary and secondary standard. The primary and secondary standards were prepared using different equipment and personnel.

Specific Reference Material Notes:

N-nitrosodiphenylamine 1000 ug/mL equivalent when used for GC analysis. Actual formulation is diphenylamine 855 ug/mL. N-Nitrosodiphenylamine is prone to breakdown in the injection port and will be converted to diphenylamine. N-Nitrosodiphenylamine is also a reactive species that can initiate premature decomposition of other compounds in the mix. For these reasons diphenylamine is used in the preparation of this mixture. When comparing the response of this compound to mixtures manufactured using N-nitrosodiphenylamine, a difference in response will be observed.

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
